

## RFQ APPLICANT QUESTIONNAIRE FORM

1. On the proposed Platte River Power Authority project, what type of work, and approximately what percentage of that work will be self-performed by your firm, or if joint venture by all joint venture parties?

2. Please state the maximum dollar value for which your firm or organization can be bonded and the amount your firm or organization currently has bonded (please attach a letter of confirmation of your firm or organization's bonding capacity from your bonding company).

Maximum Bonding Capacity: \_\_\_\_\_

Current Value of Bonded Projects: \_\_\_\_\_

3. Provide information on your firm or team's safety history. Provide a description of your safety procedures and include a resume of the safety officer for the project. Provide your firm's current worker's compensation mod rate.

4. Please describe your firm or team's philosophy and experience with similar projects in Colorado.

5. Identify the project team members that you propose and include a resume for each key team member. Provide project names and descriptions for similar jobs that the team has recently worked on together and describe the relationship between team members. Provide hours' month by month for the duration of the project for each individual team member committed to this project.

6. In response to AIA 305 questions 3.4 (projects in process) and 3.5 (five-year project history), please indicate the project delivery method used, and provide initial GMP or contract sum, and final GMP or contract sum. Provide examples of your change order form and log, and your request for information form and log.

7. Demonstrate how your firm will work with the local community to provide opportunities for participation in this project. Include information on your subcontractor prequalification, insurance, bonding, and financial requirements.

8. Describe how you will be proactive in managing the budget, controlling costs, and potential change orders during construction.

9. Describe your firm's software used during design and construction and how each software package is used to support the project.

10. Provide a description of your firm's policy on bonding of subcontractors. Since sub bonds represent an additional cost to the project, please provide your approach to sub bonding on this project, a description of potential benefits, and limitations you would be willing to self-impose in view of budget limitations.
