Board of directors regular meeting

2000 E. Horsetooth Road, Fort Collins, CO 80525
Thursday, Dec. 7, 2023, 9 a.m.

Call to order

1. Consent agenda
   a. Minutes of the regular meeting of Oct. 26, 2023
   b. 2024 proposed board of directors regular meeting schedule
   c. Strategic Financial Plan revision

Motion to approve

Public comment

Committee reports

2. Defined Benefit Plan committee report

Board action items

3. Defined Benefit Plan amendment
4. Defined Contribution Plan amendment
5. 2023 Budget contingency appropriation transfer
6. 2024 Strategic Budget review and adoption

Resolution 12-23
Resolution 13-23
Resolution 14-23
Resolution 15-23
Resolution 16-23
Resolution 17-23

Management presentations

7. SPP RTO West update
8. Rawhide Transition Plan update
9. Resource Diversification Policy update
10. Legislative preview
11. Windy Gap request for proposal recap

Management reports

12. IRP community outreach recap
13. Benefits update

Monthly informational reports – October

14. Legal, environmental and compliance report
15. Resource diversification report
16. Operating report
17. Financial report
18. General management report

Strategic discussions

Adjournment

Our vision
To be a respected leader and responsible power provider improving the region’s quality of life through a more efficient and sustainable energy future.

Our mission
While driving utility innovation, Platte River will safely provide reliable, environmentally responsible and financially sustainable energy and services to the owner communities of Estes Park, Fort Collins, Longmont and Loveland.

Our values
Safety
Without compromise, we will safeguard the public, our employees, contractors and assets we manage while fulfilling our mission.

Integrity
We will conduct business equitably, transparently and ethically while complying fully with all regulatory requirements.

Service
As a respected leader and responsible energy partner, we will empower our employees to provide energy and superior services to our owner communities.

Respect
We will embrace diversity and a culture of inclusion among employees, stakeholders and the public.

Operational excellence
We will strive for continuous improvement and superior performance in all we do.

Sustainability
We will help our owner communities thrive while working to protect the environment we all share.

Innovation
We will proactively deliver creative solutions to generate best-in-class products, services and practices.
Memorandum

Date: 11/29/2023

To: Board of directors

From: Jason Frisbie, general manager and chief executive officer
      Angela Walsh, executive assistant and board secretary

Subject: Consent agenda – December

Staff requests approval of the following items on the consent agenda. The supporting documents are included for the items listed below. Approval of the consent agenda will approve all items unless a member of the board removes an item from consent for further discussion.

Regular meeting minutes of the board of directors

2000 E. Horsetooth Road, Fort Collins, CO
Thursday, Oct. 26, 2023

Attendance

Board members
Representing Estes Park: Mayor Wendy Koenig and Reuben Bergsten
Representing Fort Collins: Mayor Jeni Arndt and Kendall Minor
Representing Longmont: Mayor Joan Peck and David Hornbacher
Representing Loveland: Mayor Jacki Marsh and Kevin Gertig

Platte River staff
Jason Frisbie (general manager/CEO)
Sarah Leonard (general counsel)
Dave Smalley (chief financial officer and deputy general manager)
Melie Vincent (chief operating officer)
Raj Singam Setti (chief transition and integration officer)
Eddie Gutiérrez (chief strategy officer)
Angela Walsh (executive assistant/board secretary)
Kaitlyn McCarty (executive assistant – finance)
Josh Pinsky (IT service desk technician II)
Shelley Nywall (director of finance)
Jason Harris (senior manager, financial reporting and budget)
Masood Ahmad (resource planning manager)
Wade Hancock (senior manager, financial planning and rates)
Javier Camacho (director of public and external affairs, strategic communications and social marketing)
Kendal Perez (strategic communications and community relations manager)
Leigh Gibson (senior external affairs specialist)
Kathleen West (communications and marketing specialist)
Jennifer Hammitt (director of legal affairs)
Matt Tribby (senior air quality engineer)
Chris Wood (environmental compliance manager)
Pat Connors (director of portfolio strategy and integration)

Guests
Daniel Brooks (Electric Power Research Institute)
Call to order

Chair Bergsten called the meeting to order at 9:00 a.m. A quorum of board members was present via roll call. The meeting, having been duly convened, proceeded with the business on the agenda.

Action items

1. Consent Agenda
   a. Approval of the regular meeting minutes of Sept. 28, 2023
   b. Resolution 10-23: 2024 rate tariff schedules

Director Hornbacher moved to approve the consent agenda as presented. Director Peck seconded. The motion carried 8-0.

Public comment

Chair Bergsten opened the public comment section by reading instructions, noting that time to accommodate each speaker would be divided equitably by the number of in-person members of the public and callers wishing to speak at the start of public comment. Eleven members of the public addressed the board.

Board action items

2. 2023 FORVIS financial audit plan (presenter: Dave Smalley)

Dave Smalley, chief financial officer and deputy general manager, introduced Chris Telli and Anna Thigpen with FORVIS to discuss the 2023 annual financial pre audit letter and engagement letter to be signed by the board chair following authorization. Chris Telli, FORVIS partner, discussed the audit process and highlighted a new Governmental Accounting Standards Board (GASB) statement for Platte River to adopt, referred to as GASB 96, requiring auditing actions on subscription-based information technology arrangements. He also summarized logistics and the timeline for the financial audit beginning in February 2024. Anna Thigpen, FORVIS director, provided an overview of the pre audit letter and engagement letter.

The board had no questions. Chair Bergsten thanked Mr. Telli and Ms. Thigpen for their overview of the materials provided.
Director Arndt moved to authorize the chair to sign the 2023 FORVIS audit plan and engagement letter as presented. Director Gertig seconded. The motion carried 8-0.

3. Dispatchable capacity (presenter: Raj Singam Setti)

Raj Singam Setti, chief transition and integration officer, summarized advancements in the clean energy transition since the board approved the Resource Diversification Policy (RDP) and key points in developing the 2024 Integrated Resource Plan (IRP). Mr. Singam Setti introduced Daniel Brooks, vice president of integrated grid and energy systems for the Electric Power Research Institute (EPRI).

Mr. Brooks presented analysis from a U.S. economy decarbonization modeling report detailing energy generation resources needed to achieve net-zero by 2050.

Mr. Singam Setti introduced John Di Stasio, president of the Large Public Power Council (LPPC). Mr. Di Stasio presented on planning activities and trends among the 28 largest public power utilities across the United States.

Mr. Singam Setti summarized the key takeaways from the two presenters and explained Platte River’s continued efforts in the clean energy transition. He reiterated staffs’ recommendation of dispatchable capacity to support renewable resource performance and increased renewable penetration, maintain reliability and enhance the ability to integrate technologies of the future.

Sarah Leonard, general counsel, explained the changes made to the draft resolution to reflect board member and public feedback following the September board meeting. Director Marsh asked when staff would purchase the aeroderivative units and if purchasing them would be staged to allow for testing the performance with the system. Jason Frisbie, general manager and chief executive officer, responded that Platte River must order the units by the second quarter of 2024, and it is more cost effective to do all the units at once. He suggested there is too much focus on the aeroderivative units and not enough on the other two elements of dispatchable capacity: long-duration storage and a virtual power plant. The proposed resolution includes all three to help protect the three pillars of the organization. Director Peck noted text in the resolution addressing long-duration storage development, asked about the storage pilot program and requested that long-duration storage be implemented first. Chair Bergsten reiterated the resolution expresses the need for all three categories of dispatchable capacity. Director Peck commented that the resolution did not address the environmental responsibility pillar. Mr. Frisbie observed the caveats in the RDP that address the three pillars of the organization, including environmental responsibility and the board can hold the general manager accountable for the actions made to reach the 2030 goal. Discussion ensued among directors and staff regarding executive sessions that covered renewable energy resource negotiations, other utilities’ clean energy transitions and their portfolios and the ability to take advantage of opportunities to further clean energy penetration.

Director Hornbacher supported the resolution with the three components of dispatchable capacity and discussed how the distribution systems have different planning challenges, how renewable generation resources will perform and the importance of reliability to the overall electric system. Director Peck
stated her support for the resolution and asked about relative costs of aeroderivative units and long-duration storage and when hydrogen fuel capabilities could be implemented. Director Arndt expressed her support for the resolution based on the information and science behind the staff’s recommendation and the trust City of Fort Collins has for Platte River Power Authority. She added that she is committed to the 100% clean energy transition and for social justice. Director Koenig emphasized the importance of reliability and supported the resolution as written, noting diversity of views in the Estes Park community but that modeling continues past the 2024 IRP. Director Marsh discussed the board’s support for staff to continue transitioning to 100% clean energy and supported the resolution. Director Minor expressed his support for the resolution because it aligns with the City of Fort Collins Climate Action goals, appreciated the public comments and feedback, and appreciated the resolution addressing the three components of dispatchable capacity.

Director Peck moved to approve Resolution 11-23: Dispatchable capacity support as presented. Director Marsh seconded. The motion carried 8-0.

Mr. Frisbie and Chair Bergsten thanked the guest speakers for presenting at the meeting.

Break 10:47-11:05

Management presentations

4. 2024 proposed Strategic Budget public hearing (presenter: Jason Harris)

Jason Harris, senior manager, financial reporting and budget, presented the changes made since the September work session, and summarized the high-level financial results and overall highlights to the proposed 2024 Strategic Budget.

Chair Bergsten stated the proposed 2024 Strategic Budget for Platte River had been delivered to the board of directors in accordance with applicable law. Legal notices were published announcing that the proposed 2024 Strategic Budget was available to the public for inspection and that the public hearing would be held October 26 for the board to receive public comment on the proposed Strategic Budget before final adoption by the end of the year.

Chair Bergsten declared the public hearing on the proposed 2024 Strategic Budget for Platte River Power Authority open.

One member of the public discussed changes reflected in the Rawhide Unit 1 fuel costs. Director Arndt asked why the unit was dispatched less. Melie Vincent, chief operating officer, explained that future cost estimates are based on modeling results and how the market has impacted dispatch of coal-fired generation. Mr. Smalley noted that a mild summer and increased hydropower this year decreased the capacity factor of Rawhide Unit 1, which affected dispatch of base-load generation resources and modeling results further.
Chair Bergsten asked if there were any additional comments or questions from the board regarding the proposed budget. There were none.

Chair Bergsten closed the public hearing.

5. Strategic Financial Plan update (presenter: Shelley Nywall)

Shelley Nywall, director of finance, reviewed updates to the proposed Strategic Financial Plan (SFP) and summarized the goals and objectives along with the financial and rate requirements included in the document. She provided an overview of the financial governance framework, highlighting the financial metrics and rate stability strategies to preserve long-term financial sustainability and manage financial risk. Ms. Nywall also discussed the advantages the SFP gives Platte River, including long-term financial sustainability and financial flexibility in an uncertain environment.

Director Arndt asked about how Platte River pays for energy from the federal hydropower allocation and if it will change as generation decreases. Ms. Nywall explained the demand and energy components to the rate Platte River pays will decrease when the allocation is decreased. Discussion ensued among directors and staff on hydropower resource allocation.

Ms. Nywall thanked Mr. Smalley for his oversight of the financial departments and celebrating his 30-year service anniversary at Platte River.

6. Marketing and community engagement update (presenter: Eddie Gutiérrez)

Eddie Gutiérrez, chief strategy officer, presented key highlights from the community engagement during public meetings in the four owner communities the past few months and previewed the fall marketing campaign to include celebrating 50 years of Platte River.

Directors offered other community groups for staff to meet with that are actively engaged in the owner communities. Director Hornbacher discussed the educational value in communication efforts throughout the owner communities. Discussions ensued among directors and staff regarding radio ads and the evolution of the marketing campaign.

7. SPP RTO West update (presenter: Melie Vincent)

Due to the limited time, this presentation was postponed to December.

Monthly informational reports for September

8. Q3 performance dashboard (presenter: Jason Frisbie)

Mr. Frisbie summarized the third quarter performance results, highlighting the reliability, environmental responsibility and financial sustainability statistics. Discussion ensued among directors and staff about how deferred revenues and expenses will impact financial results.
9. Legal, environmental and compliance report (presenter: Sarah Leonard)

Ms. Leonard highlighted the continued progress on Platte River entering the Southwest Power Pool’s western regional transmission organization scheduled to begin operation in April 2026.

10. Resource diversification report (presenter: Raj Singam Setti)

Mr. Singam Setti provided an update on the request for proposals (RFP) for wind, solar and storage projects. Director Hornbacher asked if the RFPs designated certain geographical locations or if the location was left open. Mr. Singam Setti explained that the RFP left location open, but transmission and other costs are taken into consideration when choosing the proposals to move forward.

11. Operating report (presenter: Melie Vincent)

Ms. Vincent highlighted operating results for September, showcasing a new format. Owner community demand was slightly above budget while energy was slightly below budget due to mild temperatures throughout the month. Year to date, demand is near budget and energy is below budget. The overall net variable cost to serve owner community load was significantly below budget for the month due to higher bilateral sales pricing and below-budget coal generation. Year to date, the net variable cost to serve owner community load is below budget.

12. Financial report (presenter: Dave Smalley)

Mr. Smalley highlighted favorable results for September. Change in net position was favorable by $4.8 million compared to budget due to below-budget operating expenses and above-budget unrealized gains and interest income on investments, partially offset by below-budget revenues. Year to date, change in net position is favorable by $14.7 million. Revenues over budget included sales for resale, which were $1.4 million above budget due to short-term sales. Owner community sales and energy came in slightly below budget. The purchased power expense was above budget but was offset by below-budget fuel costs. He noted the need for a budget contingency transfer at the end of 2023, expected to be about $2.2 million, with more details listed in the general management report.

Chair Bergsten commented on the change in net position being part of the strategy in deferring revenues and expenses and asked if the change in net position is higher than expected. Mr. Smalley responded that the $14.7 million is above budget and Platte River plans to defer revenues to stay within the Strategic Financial Plan matrix.
13. General management report (presenter: Jason Frisbie)

Mr. Frisbie highlighted the board invitation to the holiday employee appreciation party and addressed comments about Platte River’s 10-year capital plan and how it relates to the budgeting process for adding renewable energy (which generally does not show as capital because payments under renewable power purchase agreements are treated as operation and maintenance expenses). He also notified the board that he would be out of the office on medical leave.

Roundtable and strategic discussion topics

Directors provided updates from their individual communities.

Adjournment

With no further business, the meeting adjourned at 12:16 p.m. The next regular board meeting is scheduled for Thursday, Dec. 7, 2023, at 9:00 a.m. virtually and at Platte River Power Authority, 2000 E. Horsetooth Road, Fort Collins, Colorado.

AS WITNESS, I have executed my name as Secretary and have affixed the corporate seal of the Platte River Power Authority this ________ day of ____________________, 2023.

__________________________
Secretary
RESOLUTION NO. 12-23

The board of directors (board) of Platte River Power Authority (Platte River) hereby resolves that:

1. Unless otherwise directed by the board, the board’s annual meeting and regular meetings during calendar year 2024 will be held at 9:00 a.m. local time in Platte River’s boardroom, 2000 East Horsetooth Road, Fort Collins, Colorado, or virtually, according to the following schedule:

   February 29 – annual meeting
   March 28
   April 25
   May 30
   July 25

   August 29
   September 26
   October 31
   December 12

2. Board meetings are open to the public. The secretary is authorized and directed to post at the place designated below and to publish in newspapers of general circulation in Estes Park, Fort Collins, Longmont and Loveland full and timely notice of this meeting schedule.

3. The designated place for posting of notices of board meetings is Platte River’s public website, www.prpa.org, on the page specific to the board. For purposes of C.R.S. § 24-6-402(2)(c)(I), this action is deemed to have occurred at the board’s first regular meeting in calendar year 2024 and will be incorporated into the record of that meeting.

AS WITNESS, I have executed my name as secretary and have affixed the corporate seal of the Platte River Power Authority this 7th day of December, 2023.

Memorandum

Date: 11/29/2023
To: Board of directors
From: Jason Frisbie, general manager and chief executive officer
       Dave Smalley, chief financial officer and deputy general manager
       Shelley Nywall, director of finance
       Wade Hancock, senior manager, financial planning and rates
Subject: Strategic Financial Plan update

The board last adopted the Strategic Financial Plan (SFP) in February 2018. The SFP provides direction to preserve long-term financial sustainability and manage financial risk by defining financial metrics and rate stability strategies.

Staff updated the SFP and prepared the attached white paper and presented the changes at the October board meeting. Financial metric calculations were updated to align with rating agency criteria and Platte River’s change in financial position. Plan revisions include:

- Added language reflecting rate stability strategies
- Edited language and layout enhancing readability
- Title changes
  - Changed net income to change in net position for consistency with governmental accounting reporting and removed the word projected
  - Changed debt ratio to adjusted debt ratio for consistency with rating agency guidance
  - Changed unrestricted cash on hand to days adjusted liquidity on hand for consistency with rating agency guidance

Staff recommends the board adopt the Strategic Financial Plan revisions as proposed.

Attachments

- Draft Strategic Financial Plan
- Strategic Financial Plan white paper
- Resolution 13-23: Strategic Financial Plan revision
Strategic Financial Plan
Strategic Financial Plan

In support of Platte River’s foundational pillars of providing reliable, environmentally responsible and financially sustainable energy and services, and Platte River’s mission, vision and values and strategic initiatives, the Strategic Financial Plan (SFP) provides direction to preserve long-term financial sustainability and manage financial risk. The objectives of the SFP are as follows:

- Generate adequate earnings margins and cash flows
- Maintain sufficient liquidity for operational stability
- Maintain access to low-cost capital
- Provide wholesale rate stability

Platte River is also subject to the following financial and rate requirements:

- General powers of Platte River, as stated by Colorado Revised Statute 29-1-204(3)(j), include the right to fix, maintain, and revise fees, rates, and charges for functions, services, or facilities provided. Platte River’s Board of Directors have the exclusive authority to establish electric rates.

- Power Supply Agreements (PSAs) with the owner communities require the board to review rates at least once each calendar year. The PSAs also require rates to be sufficient to cover all operating and maintenance expenses, purchased power costs, bond service expenses, and to provide reasonable reserves and adequate earnings margins so Platte River may obtain favorable debt financing.

- The General Power Bond Resolution requires that rates be sufficient to generate net revenues that cover bond service expense at a minimum 1.10 times. Platte River must review rates and charges as necessary, no less than once each calendar year.

To meet these objectives and requirements, staff established financial metrics and rate stability strategies. The financial metrics take into consideration rating agency guidelines, targeting an "AA" category credit rating. The rate stability strategies include fiscal responsibility and rate smoothing.

Additionally, to manage financial assets and risk, staff will continue to implement and maintain prudent business practices in managing reserves and budgeting, complying with financial policies and procedures and maintaining the enterprise risk management program.

Staff analyzes financial results and projections relative to the financial metrics throughout the year. Staff must formally review the SFP with the board at least every five years.

Financial metrics

The SFP financial metrics support Platte River’s financial obligations including those established by the Colorado Revised Statutes, PSAs, and General Power Bond Resolution and preserve long-term financial sustainability (cash flow, earnings, leverage, liquidity). The financial metrics maintain adequate reserves and provide balance between financing capital investments with cash and debt.
Strong financial metrics gives Platte River flexibility to implement necessary rate changes and to smooth rates over longer periods of time to minimize short-term rate impacts. Multi-year performance is considered during the evaluation of rate action and decision making. Platte River may not achieve financial metric projections in all years if staff considers the deficiency temporary.

The financial metrics described below were established based on guidelines provided for an “AA” category credit rating by Moody’s Investor’s Services, Fitch Ratings and Platte River’s financial objectives. Platte River’s financial advisor, PFM Financial Advisors LLC, also reviewed the SFP.

- **Cash flow metric:** Generate minimum 1.50 times fixed obligation charge coverage ratio
- **Earnings metric:** Generate minimum change in net position equal to 3% of annual operating expenses
- **Leverage metric:** Target adjusted debt ratio less than 50%
- **Liquidity metric:** Target minimum 200 days adjusted liquidity on hand

**Cash flow metric: Generate minimum 1.50 times fixed obligation charge coverage ratio**

The fixed obligation charge coverage ratio measures Platte River’s annual cash flows and the ability to repay annual power revenue bond service expense and debt-like obligations.

Debt-like obligations include demand or capacity payments on contracted assets and any debt service associated with off-balance sheet obligations. Examples of these “debt-like obligations” include:

- Fixed obligation of power purchase agreements or a portion of purchase power agreements if the fixed obligation is not defined
- Off-balance-sheet obligations
- Leases and subscription-based capital assets

Platte River has a legal obligation to achieve a minimum 1.10 times bond service coverage ratio requirement under the General Power Bond Resolution. A minimum 1.50 times fixed obligation charge coverage ratio provides sufficient annual cash flows to meet the legal minimum 1.10 times bond service coverage ratio and partially fund future capital additions.

**Earnings metric: Generate minimum change in net position equal to 3% of annual operating expenses**

Change in net position measures total earnings. The PSAs with the owner communities, (in Article 2(b)(iv)) require Platte River to provide an earnings margin adequate to obtain revenue bond financing on favorable terms and to provide for the establishment and maintenance of reasonable reserves. Reserves provide financial flexibility and helps Platte River avoid becoming over leveraged.

The change in net position minimum is a percentage of annual operating expenses that will change with inflation and fluctuations in operating expenses. This metric provides adequate earnings margin to maintain cash reserves, which balances the adjusted debt ratio to fund capital investments.
Leverage metric: Target adjusted debt ratio less than 50%

Adjusted debt ratio measures statement of net position leverage. An adjusted debt ratio less than 50% gives Platte River a strong statement of net position and reduces the risk of becoming over leveraged. However, Platte River operates in a capital-intensive industry and this ratio is difficult to change in the short term, so a long-term planning horizon is critical when evaluating debt levels. If significant financing is needed, this metric may not be met in the short term but would be expected to return to the target in a reasonable time within the planning horizon.

Liquidity metric: Target minimum 200 days adjusted liquidity on hand

The PSAs with the owner communities (in Article 2(b)(iv)) require Platte River to provide for the establishment and maintenance of reasonable reserves.

Days adjusted liquidity on hand measures Platte River’s ability to meet daily operating cash flow requirements. It also serves as a hedge against unforeseen financial obligations resulting from significant events and provides flexibility to take advantage of opportunities. Achieving this metric generates and maintains adequate cash. Cash that is liquid or unrestricted refers to total funds excluding legally required reserves under the General Power Bond Resolution. Bond required reserves include the reserve and contingency fund and the bond service funds. Due to Platte River’s strong financial and cash positions, Platte River’s current outstanding debt issuances do not require bond reserve funds.

Included within this metric is the rate stabilization fund, established and maintained as allowed by the General Power Bond Resolution. The purpose of the rate stabilization fund is to reduce or eliminate the rate impact from an unforeseen event that affects Platte River’s ability to meet the minimum legal bond service coverage ratio requirement, but not to smooth the rate impacts of continued typical business operations.

Rate stability strategies

Competitive wholesale rates give the owner communities an economic advantage for their residential, commercial and industrial customers. Platte River strives to maintain services and rates offered at competitive prices compared to similar services and products provided by other wholesale electric utilities in the region. Platte River has implemented the following rate strategies to help reduce long-term rate pressure and give the owner communities greater rate predictability.

Fiscal responsibility

Revenue generation

When financially advantageous, operationally feasible and reliable, Platte River sells generation surplus to owner community needs to other regional utilities on a short- or long-term basis. Margin from these sales reduce Platte River's revenue requirement and benefits the owner communities through lower rates. Staff proactively seeks sales opportunities.
Expense management

Platte River prioritizes preventive and predictive maintenance strategies and proactive capital investments to provide long-term system benefits and efficiencies. Platte River will continue to invest in its existing power generation and transmission assets to maintain operational efficiency and to proactively address federal and state regulatory requirements. Platte River plans to expand its investment in noncarbon resources, such as wind and solar, distributed energy resources and other generating capacity as needed and retire coal-fired generation. Targeting an “AA” category credit rating through the financial metrics provides access to low-cost capital to support these investments. Platte River is committed to managing costs through its budget and long-term financial planning processes.

Rate smoothing

The board establishes tariffs and charges based on projected cost of service with adequate margin to achieve SFP financial metrics. Rate smoothing is accomplished through accounting policies and multi-year analysis to develop a long-term rate path with greater predictability.

Accounting policies - revenue and expense smoothing

As a board-regulated entity, Platte River is subject to the provisions of Governmental Accounting Standards Board 62 Codification of Accounting and Financial Reporting Guidance Contained in Pre-November 30, 1989 FASB and AICPA Pronouncements, Regulated Operations, paragraphs 476–500, which requires the effects of the rate making process to be recorded in the financial statements. Accordingly, certain revenues and expenses normally reflected in the statements of revenues, expenses and changes in net position as incurred are recognized when they are included in wholesale rates. Platte River adopts accounting policies that help stabilize rates.

Multi-year rate analysis

The board prefers to use a multi-year rate smoothing strategy, as deemed appropriate, to avoid greater single-year rate impacts or to accomplish specified objectives. Platte River will use this mechanism to stabilize rates and increase financial flexibility.
Strategic Financial Plan

Platte River Power Authority white paper

September 2023

The Strategic Financial Plan (SFP) is Platte River’s approach to financial management to achieve its short- and long-term goals and objectives. The Platte River Board of Directors last approved the SFP in 2018. Staff has since reviewed and updated the SFP for board consideration with requested adoption in December 2023. Staff applied rating agency criteria for joint action agencies to the financial metrics in Platte River’s long-term financial model projections. After the analysis, staff concluded the existing financial metrics, targeting an “AA” category credit rating, continue to provide the financial stability and flexibility Platte River needs to meet its strategic initiatives. A solid financial position will allow Platte River to respond in a timely and value-maximizing manner to unexpected changes and take advantage of opportunities. This is important as uncertainty continues to exist with the resource transition plan and responsiveness in the changing environment is necessary. The intent of the SFP is to preserve long-term financial sustainability and manage financial risk.

Staff recommends SFP modifications including added language to reflect rate stability strategies and language and layout updates to enhance readability. The financial metric names have been modified for better alignment with rating agency guidelines. The items included in the calculations were updated to reflect changes in Platte River’s financial position and criteria from the rating agencies. This white paper details the financial metrics, rate stability strategies and recommendation. The appendix describes Platte River’s financial sustainability actions and activities that reflect financial flexibility, a strong financial position and an “AA” category credit rating.

Staff analyzes financial results and projections relative to the financial metrics throughout the year. Staff must formally review the SFP with the board at least every five years.

Strategic Financial Plan

In support of Platte River’s foundational pillars of providing reliable, environmentally responsible and financially sustainable energy and services, and Platte River’s mission, vision and values and strategic initiatives, the SFP provides direction to preserve long-term financial sustainability and manage financial risk. The objectives of the SFP are as follows:
Generate adequate earnings margins and cash flows
Maintain sufficient liquidity for operational stability
Maintain access to low-cost capital
Provide wholesale rate stability

Platte River is also subject to the following financial and rate requirements:

- General powers of Platte River, as stated by Colorado Revised Statute 29-1-204(3)(j), include the right to fix, maintain, and revise fees, rates, and charges for functions, services, or facilities provided. Platte River’s Board of Directors have the exclusive authority to establish electric rates.

- Power Supply Agreements (PSAs) with the owner communities require the board to review rates at least once each calendar year. The PSAs also require rates to be sufficient to cover all operating and maintenance expenses, purchased power costs, bond service expenses, and to provide reasonable reserves and adequate earnings margins so Platte River may obtain favorable debt financing.

- The General Power Bond Resolution requires that rates be sufficient to generate net revenues that cover bond service expense at a minimum 1.10 times. Platte River must review rates and charges as necessary, no less than once each calendar year.

To meet these objectives and requirements, staff established financial metrics and rate stability strategies. The financial metrics take into consideration rating agency guidelines, targeting an “AA” category credit rating. The rate stability strategies include fiscal responsibility and rate smoothing.

Additionally, to manage financial assets and risk, staff will continue to implement and maintain prudent business practices in managing reserves and budgeting, complying with financial policies and procedures and maintaining the enterprise risk management program.

Financial metrics

The SFP financial metrics support Platte River’s financial obligations including those established by the Colorado Revised Statutes, PSAs, and General Power Bond Resolution and preserve long-term financial sustainability (cash flow, earnings, leverage, liquidity). The financial metrics maintain adequate reserves and provide balance between financing capital investments with cash and debt.

Strong financial metrics gives Platte River flexibility to implement necessary rate changes and to smooth rates over longer periods of time to minimize short-term rate impacts. Multi-year performance is considered during the evaluation of rate action and decision making. Platte River may not achieve financial metric projections in all years if staff considers the deficiency temporary.

The financial metrics described below were established based on guidelines provided for an “AA” category credit rating by Moody’s Investor’s Services (Moody’s), Fitch Ratings and Platte River’s financial objectives. Platte River’s financial advisor, PFM Financial Advisors LLC, also reviewed the SFP.
Cash flow metric: Generate minimum 1.50 times fixed obligation charge coverage ratio

The fixed obligation charge coverage ratio is a measurement of Platte River’s annual cash flows and their ability to repay annual power revenue bond service expense and debt-like obligations.

Debt-like obligations include demand or capacity payments on contracted assets and any debt service associated with off-balance sheet obligations. Examples of these "debt-like obligations" include:

- Fixed obligation of power purchase agreements or a portion of purchase power agreements if the fixed obligation is not defined
- Off-balance-sheet obligations
- Leases and subscription-based capital assets

Currently, Platte River’s debt-like obligations include:

- Fixed portion (demand payment) of Western Area Power Administration hydropower
- 30% of purchase power expense for long-term agreements when the fixed obligation is not defined
- Windy Gap Firming Project (Chimney Hollow) debt service payments
- Leases and subscription-based capital assets debt service payments (new based on accounting pronouncements)

Platte River has a legal obligation to achieve a minimum 1.10 times bond service coverage ratio requirement under the General Power Bond Resolution. A minimum 1.50 times fixed obligation charge coverage ratio provides sufficient annual cash flows to meet the legal minimum 1.10 times bond service coverage ratio and partially fund future capital additions.

\[
\text{Fixed obligation charge coverage ratio} = \frac{\text{Net operating revenues}^1 + \text{Interest and other income} + \text{Debt like obligations}}{\text{Net revenue bond service} + \text{Debt like obligations}}
\]

\[
\text{Bond service coverage ratio} = \frac{\text{Net operating revenues} + \text{Interest and other income}}{\text{Net revenue bond service}}
\]

---

1 Net operating revenues include total operating revenues less total operating expenses, excluding depreciation, amortization and accretion.
Earnings metric: Generate minimum change in net position\(^2\) equal to 3% of annual operating expenses

Change in net position measures total earnings. The PSAs with the owner communities, (in Article 2(b)(iv)) require Platte River to provide an earnings margin adequate to obtain revenue bond financing on favorable terms and to provide for the establishment and maintenance of reasonable reserves. Reserves provide financial flexibility and helps Platte River avoid becoming over leveraged.

The change in net position minimum is a percentage of annual operating expenses, which will change with inflation and fluctuations in operating expenses. This metric provides adequate earnings margin to maintain cash reserves, which balances the adjusted debt ratio to fund capital investments.

\[
\text{Change in net position} = (\text{Total operating expenses} - \text{depreciation, amortization and accretion}) \times 3.0\%
\]

Leverage metric: Target adjusted debt ratio less than 50%

Adjusted debt ratio measures statement of net position leverage. An adjusted debt ratio less than 50% gives Platte River a strong statement of net position and reduces the risk of becoming over leveraged. However, Platte River operates in a capital-intensive industry and this ratio is difficult to change in the short term, so a long-term planning horizon is critical when evaluating debt levels. If significant financing is needed, this metric may not be met in the short term but would be expected to return to the target in a reasonable time within the planning horizon.

The ratio includes debt and debt-like obligations from Platte River’s statement of net position:

- Long-term debt
- Net pension liability (new based on rating agency criteria)
- Other long-term obligations, including the Windy Gap Firming Project pooled financing arrangement (new)

\[
\text{Adjusted debt ratio} = \frac{\text{Long term debt, net} + \text{Net pension liability} + \text{Other long term obligations}}{\text{Total electric utility plant} + \text{Net working capital}}
\]

Liquidity metric: Target minimum 200 days adjusted liquidity on hand

The PSAs with the owner communities (in Article 2(b)(iv)) require Platte River to provide for the

\(^2\) Change in net position was formerly net income.
establishment and maintenance of reasonable reserves.

Days adjusted liquidity on hand measures Platte River’s ability to meet daily operating cash flow requirements. It also serves as a hedge against unforeseen financial obligations resulting from significant events and provides flexibility to take advantage of opportunities. Achieving this metric generates and maintains adequate cash. Cash that is liquid or unrestricted refers to total funds excluding legally required reserves under the General Power Bond Resolution. Bond required reserves include the reserve and contingency fund and the bond service funds. Due to Platte River’s strong financial and cash positions, Platte River’s current outstanding debt issuances do not require bond reserve funds.

**Rate stabilization fund**

Included within this metric is the rate stabilization fund, established and maintained as allowed by the General Power Bond Resolution. The purpose of the rate stabilization fund is to reduce or eliminate the rate impact from an unforeseen event that affects Platte River’s ability to meet the minimum legal bond service coverage ratio requirement, but not to smooth the rate impacts of continued typical business operations.

Staff will communicate all rate stabilization fund withdrawals and contributions to the board, except for rate stabilization fund interest distributions. Increases to the rate stabilization fund are based on analysis to mitigate risk exposure. If Platte River uses the rate stabilization fund balance partially or in full due to an event, the target balance will be replenished in increments determined and approved through the budget process.

The rate stabilization fund has a $20 million balance. Staff completes an annual analysis to verify the balance would be sufficient to achieve the legal minimum bond service coverage ratio during an extended unplanned generation resource outage in varying power market conditions. Lowering the rate stabilization fund balance provides no business advantage. Maintaining the current rate stabilization fund balance has no impact on projected future rates or financial results, is viewed favorably by rating agencies and could provide benefits for future unforeseen events. The target rate stabilization fund balance analysis and justification are maintained outside of the SFP. Staff brings recommended changes to the board as necessary.

\[
Days \text{ adjusted liquidity on hand} = \frac{\text{Cash} - \text{Bond required reserves}}{\text{Total operating expenses} - \text{depreciation, amortization and accretion}} \times \text{Days in the year}
\]

**Rate stability strategies**

Competitive wholesale rates give the owner communities an economic advantage for their residential, commercial and industrial customers. Platte River strives to maintain services and rates offered at competitive prices compared to similar services and products provided by other wholesale electric utilities in the region. Platte River has implemented the following rate strategies to help reduce long-term rate pressure and give the owner communities greater rate predictability.
Fiscal responsibility

Revenue generation

When financially advantageous, operationally feasible and reliable, Platte River sells generation surplus to owner community needs to other regional utilities on a short- or long-term basis. Margin from these sales reduce Platte River’s revenue requirement and benefits the owner communities through lower rates. Staff proactively seeks sales opportunities.

Expense management

Platte River prioritizes preventive and predictive maintenance strategies and proactive capital investments to provide long-term system benefits and efficiencies. Platte River will continue to invest in its existing power generation and transmission assets to maintain operational efficiency and to proactively address federal and state regulatory requirements. Platte River plans to expand its investment in noncarbon resources, such as wind and solar, distributed energy resources and other generating capacity as needed and retire coal-fired generation. Targeting an “AA” category credit rating through the financial metrics provides access to low-cost capital to support these investments. Platte River is committed to managing costs through its budget and long-term financial planning processes.

Rate smoothing

The board establishes tariffs and charges based on projected cost of service with adequate margin to achieve SFP financial metrics. Rate smoothing is accomplished through accounting policies and multi-year analysis to develop a long-term rate path with greater predictability.

Accounting policies - revenue and expense smoothing

As a board-regulated entity, Platte River is subject to the provisions of Governmental Accounting Standards Board 62 Codification of Accounting and Financial Reporting Guidance Contained in Pre-November 30, 1989 FASB and AICPA Pronouncements, Regulated Operations, paragraphs 476–500, which requires the effects of the rate making process to be recorded in the financial statements. Accordingly, certain revenues and expenses normally reflected in the statements of revenues, expenses and changes in net position as incurred are recognized when they are included in wholesale rates. Platte River adopts accounting policies that help stabilize rates.

Multi-year rate analysis

The board prefers to use a multi-year rate smoothing strategy, as deemed appropriate, to avoid greater single-year rate impacts or to accomplish specified objectives. Platte River will use this mechanism to stabilize rates and increase financial flexibility.

Recommendation

Electric utilities operate in a capital-intensive industry with investments in long-term generation and
transmission assets. While Platte River implements the resource transition plan over the next few years, plans that have yet to be put in place are uncertain. The SFP financial metrics, rate stability strategies and “AA” category credit rating provide critical financial stability and flexibility. Platte River’s financial position and “AA” category credit rating allow it to preserve long-term financial sustainability and maintain competitive wholesale electric rates while pursuing its strategic initiatives.

Staff concludes that maintaining the current financial metrics is advantageous for Platte River and the owner communities as they provide financial flexibility to achieve the following:

- Obtain access to capital markets at a lower cost of capital
- Take advantage of opportunities for capital investments, lower expenses and provide benefits to the owner communities
- Manage industry-related financial risks
- Respond in a timely and value-maximizing manner to unexpected changes

In addition to updating financial metric calculations for alignment with rating agency criteria and Platte River’s change in financial position, staff recommends the following SFP modifications:

- Added language reflecting rate stability strategies
- Edited language and layout enhancing readability
- Title changes
  - Changed net income to change in net position for consistency with governmental accounting reporting and removed the word projected
  - Changed debt ratio to adjusted debt ratio for consistency with rating agency guidance
  - Changed unrestricted cash on hand to adjusted liquidity on hand for consistency with rating agency guidance

Staff will continue to evaluate the financial metrics to determine the best path forward to achieve financial and operational goals, objectives, and strategic initiatives for Platte River and the owner communities.

Staff will review the SFP and the proposed changes at the October board meeting. In December, staff will ask the board to approve the SFP with these modifications.
APPENDIX

Platte River’s financial sustainability

An essential component to Platte River’s overall financial goal is to preserve long-term financial sustainability. Maintaining an “AA” category credit rating provides long-term financial sustainability and competitive wholesale electric rates.

Over the years, Platte River has benefited from its strong financial position, favorable credit rating and sound financial decisions.

- Preventive and predictive maintenance strategies and proactive capital investments are prioritized to provide long-term system benefits and efficiencies
- Accounting policies are a strategic rating setting activity and contribute to a strong financial position. Through a governmental accounting standard, certain expenses and revenues normally reflected in the statements of revenues, expenses and changes in net position as incurred are recognized when they are included in Platte River’s wholesale rates. Below is a list of Platte River Board-approved accounting policies for specific activities:
  - 2022 Deferred revenue and expense
  - 2021 Craig units 1 and 2 decommissioning accrual
  - 2020 Windy Gap Firming Project
  - 2020 Change in depreciation method
  - 2017 Fiber optic network
  - 2015 Pension contribution expense recognition
  - 2012 Debt issuance expense recognition
  - 2009 Additional pension funding expense recognition
  - 2004 Maintenance outage expense accrual
- 2023 established favorable counterparty credit in the energy market and for power purchase agreements
- 2022 blended the intermittent and dispatchable variable cost energy charges with the ability to absorb the shift of the risk of cost variances back to Platte River from the owner communities
- 2020 provided a one-time $1 million owner distribution to the governing body of the owner communities to assist with the COVID-19 pandemic impacts within their communities
- 2020 refinanced bonds resulted in $4.6 million in net present value savings
- 2018 adopted the resource diversification policy to transition Platte River to a noncarbon future as a significant initiative requiring a strong financial position and financial flexibility
- 2015 refinanced bonds resulted in $13.7 million of net present value savings
2009 series DD bonds were paid off, the last bond issue requiring a bond reserve fund and Platte River's strong financial position eliminated the requirement to maintain bond required reserve funds, which were maintained at a negative arbitrage due to earnings restrictions.

2008 used cash reserves to fund combustion turbine Unit F and avoided private use restrictions associated with the use of tax-exempt bonds, which would have reduced the economic benefit of a long-term capacity sale.

Below are Moody's joint action agency rating criteria, corresponding weightings and Platte River's actions and strategies for each category. These actions maintain Platte River’s “AA” category credit rating.

RESOLUTION NO. 13-23

Background

A. In February 2018, the board of directors (board) of Platte River Power Authority (Platte River) adopted Resolution No. 03-18, approving the current Strategic Financial Plan.

B. Management and staff recently revised the Strategic Financial Plan to improve readability, update terminology, and further describe Platte River’s rate stability strategies.

C. Staff shared an initial revised draft of the Strategic Financial Plan at the September 2023 board meeting and then presented the revisions again, together with an accompanying white paper, at the October 2023 board meeting.

D. Staff recommends the board adopt the revised Strategic Financial Plan.

Resolution

The board of directors of Platte River Power Authority therefore resolves that:

1. The Strategic Financial Plan, in substantially the form presented, is approved.

2. This Strategic Financial Plan supersedes and replaces all previous Strategic Financial Plans and will remain in effect until formally revised or replaced by board action.

AS WITNESS, I have executed my name as Secretary and have affixed the corporate seal of the Platte River Power Authority this 7th day of December, 2023.

Vote:
Memorandum

Date: 11/29/2023

To: Board of directors

From: David Hornbacher, board member, retirement committee chair
      Jason Frisbie, general manager and chief executive officer

Subject: Defined Benefit Plan committee report

The retirement committee held its quarterly meeting on Oct. 26, 2023. The minutes of the meeting are included in the board packet. At the board meeting, committee chair Dave Hornbacher will provide a summary of the October retirement committee meeting.

Attachment

- Oct. 26, 2023 defined benefit plan committee minutes - DRAFT
Regular meeting minutes of the defined benefit plan committee

2000 E. Horsetooth Road, Fort Collins, CO and virtually via Microsoft Teams
Thursday, October 26, 2023

Attendance

Committee members
David Hornbacher, chair
Jason Frisbie (plan administrator)
Jeni Arndt
Reuben Bergsten
Jacki Marsh
Dave Smalley

Committee members - absent

Platte River staff
Julie Depperman (director of treasury services)
Shelley Nywall (director of finance)
Caroline Schmiedt (senior counsel)
Angela Walsh (executive assistant to the general manager/CEO)

Guests
Jason Palmer of Northern Trust Asset Management (Northern Trust)
Dan Phillips of Northern Trust
Jim Hayes of Northern Trust

Call to order

The meeting was called to order at 1:04 p.m. A quorum was present and the meeting, having been duly convened, was ready to proceed with business. Committee Chair Dave Hornbacher led the meeting.

Action items

(1) Review minutes of Aug. 31, 2023, meeting. Chair David Hornbacher asked for a motion to approve the minutes from the Aug. 31, 2023, meeting. Reuben Bergsten moved to approve the minutes as submitted. Jeni Arndt seconded, and the motion carried 6-0.

(2) Third quarter investment performance. Dan Phillips of Northern Trust reviewed the third quarter performance and highlighted the plan’s performance relative to its benchmarks (included in the meeting materials). Northern Trust staff summarized key market developments, economic indicators, and significant events that impacted the market.
Mr. Palmer provided a brief portfolio overview, highlighting that inception to date the portfolio returned 6.4%, equal to the benchmark. Year-to-date, through September 30, the plan returned 2.4%, significantly below the benchmark return of 6.1%. The long-term return goal is 7.5%.

Mr. Palmer reviewed the plan’s portfolio position for the third quarter and the asset allocation process. The portfolio consists of risk control and risk assets. For the quarter, the plan was underweight in risk assets and overweight in cash and high yield. Plan assets decreased from $108.5 million to $105.7 million, which accounts for contributions, income, appreciation, depreciation and benefit payments.

Mr. Palmer reviewed the plan’s key performance drivers for the quarter. Global equities, fixed income and real assets declined. Overweight cash and underweight allocations to fixed income and global equities aided performance. Tactical positioning improved results by an estimated 0.5%. Investment manager selection was negative during the quarter. U.S. and international low-volatility equity strategies outperformed their benchmarks. Overall, investment manager selection hurt performance.

Page 17 of the quarterly investment report provides rationales for the portfolio’s positioning in each asset class.

(3) Capital markets outlook. Every year, Northern Trust’s capital market assumptions working group develops forward-looking, historically aware forecasts for global economic activity and financial market returns that drive Northern Trust’s ten-year asset class return expectations and inform their asset allocation decisions. The asset allocation decisions guide Northern Trust’s long-term strategic asset allocations, which are used by institutional and individual investors worldwide. Mr. Phillips provided an overview of the capital market assumptions. He noted the 10-year forward-looking themes (beginning on page 4), which include growth restraints, inflation adaptation, central bank concessions, geopolitical fault lines, sustainable green transition and private matters. (Included in the meeting materials.)

(4) Annual investment policy review. Northern Trust reviewed the Investment Policy Statement (IPS). The purpose of IPS is to establish overall guidelines and parameters for investing fund assets and to help the retirement committee and other persons charged with executing the IPS effectively supervise, monitor and evaluate the investments. The intent of the IPS is to provide guidelines that are specific enough to be meaningful but also flexible enough to take into account practical considerations.

In reviewing the exhibits of the IPS, Mr. Palmer explained recommended changes for the IPS focusing on increasing strategic asset allocation with domestic equities and inflation protection by 1% each and decreasing core fixed income and emerging market equities by 1% each. The benchmark composition will also change by the same parameters. The IPS was updated to reflect the current roster of committee members as well.

Chair Hornbacher asked for a motion to approve the revised IPS as presented. Mayor Arndt moved, Mr. Frisbie seconded, and the motion carried 6-0.

(5) Plan amendment. Caroline Schmiedt reviewed the proposed plan amendment. Several plan references will be updated to comply with the SECURE ACT 2.0. There are also changes to the definitions of “Compensation” and “Final Average Monthly Compensation.” Revisions include clarifying the calculation of maximum permissible benefit, and deleting outdated language. (Memorandum and plan amendment included in the meeting materials provide the blueline revisions as proposed.)
Chair Hornbacher asked for a motion to approve the plan amendment and submit the amendment to the board for adoption. Mr. Bergsten moved, Mayor Marsh seconded, and the motion carried 4-0 with Mr. Frisbie and Mr. Smalley abstaining.

**Proposed 2024 retirement committee meeting schedule.** The committee reviewed the following proposed 2024 schedule for the committee’s quarterly meetings. Under the proposed schedule, all meetings will be held in the Platte River board room (or remotely via Microsoft Teams) and will begin at 12:30 p.m.

- February 29, 2024
- May 30, 2024
- August 29, 2024
- October 31, 2024

Chair Hornbacher asked for a motion to approve the schedule as presented. Mr. Frisbie moved, Mr. Bergsten seconded, and the motion carried 6-0.

**Other business.** None.

The next regular committee meeting is scheduled for February 29, 2024, at 12:30 p.m. in the Platte River board room or virtually via Microsoft Teams.

The meeting adjourned at 1:58 p.m.

__________________________
Chair David Hornbacher
Memorandum

Date: 11/29/2023

To: Board of directors

From: Jason Frisbie, general manager and chief executive officer
Libby Clark, director, human resources & safety
Caroline Schmiedt, senior counsel

Subject: Platte River Power Authority Defined Benefit Plan amendment

The Retirement Committee recommends the board adopt the attached resolution amending the Platte River Power Authority Defined Benefit Plan (Plan).

Platte River is required to periodically review the Plan to ensure it remains compliant with current law and IRS regulations. The Plan’s outside pension counsel from Reinhart Boerner Van Deuren thoroughly reviewed the Plan document and recommended the attached amendments to implement the following modifications (highlighted in green) to:

- clarify the definitions of compensation and final average monthly compensation and remove outdated language;
- update references to the required minimum distribution under the SECURE Act 2.0; and
- clarify the calculation of maximum benefits.

The Plan’s actuary and trustee reviewed and approved the changes described below.

Definition of Compensation

Reinhart Boerner Van Deuren suggested minor revisions to section 1.10 in Article 1 of the Plan.

Clarify that all taxable fringe benefits, including but not limited to gainsharing and bonuses, are not included in the definition of Compensation.
Article 1, Section 1.10(a)(ii)(iii): Compensation

(a) for Plan Years beginning on or after January 1, 2000, wages paid by the Employer for which the Employer is required to furnish the Participant a written statement under Code §§6041(d), 6051(a)(3), and 6052 adjusted as follows:

ii. to the extent described in Section 1.23, accumulated personal leave and sick pay amounts paid upon termination of employment or upon commencement of an In Service Distribution will be included only for Participants whose Employment Commencement Date occurred prior to January 1, 2004;

iii. all of the following will be excluded:

A. expense reimbursements and allowances;
B. all taxable fringe benefits, including but not limited to gainsharing and bonuses except group term life insurance premiums;
C. moving expenses;
D. short-term disability payments;
E. long-term disability payments;
F. non-qualified deferred compensation;
G. severance pay; and
H. wellness initiatives.

Delete outdated information in sections e, f, and h and consolidated into g.

Article 1, Section 1.10(e)(f)(g)(h): Compensation

(e) subject to (d) above, for calendar years beginning after December 31, 1998, the annual compensation taken into account under this Plan for any calendar year shall not include amounts in excess of $200,000, as adjusted annually by the Secretary of the Treasury to reflect cost-of-living changes.

(f) subject to (d) above, for calendar years beginning on or after January 1, 1996 and for Participants who became a Participant on or after January 1, 1996, annual compensation taken into account under this Plan for any calendar year shall not exceed $150,000 as adjusted annually by the Secretary of the Treasury to reflect cost-of-living changes.

(g) Increase in limit. subject to (d) above, for the annual compensation of each Participant taken into account in determining benefit accruals in any Plan Years beginning after December 31, 2001, the annual compensation of each Participant taken into account in determining benefits provided under the Plan for any determination period shall not exceed $200,000, as adjusted for cost-of-living increases in accordance with Code § 401(a)(17)(B). The cost-of-living adjustment in effect for a calendar year applies to annual compensation for the determination period that begins with or within such calendar year. Annual compensation means
compensation during the Plan Year or such other consecutive 12-month period over which compensation is otherwise determined under the Plan (the determination period). If a determination period consists of fewer than 12 months, the annual compensation limit $200,000 limitation will be multiplied by a fraction, the numerator of which is the number of months in the determination period, and the denominator of which is 12. If compensation for any prior period is taken into account in determining a Participant’s benefits for the current Plan Year, the compensation for such prior determination period is subject to the applicable annual compensation limit in effect for that prior period. For purposes of determining benefit accruals in a Plan Year beginning after December 31, 2001, compensation for any prior determination period shall be $150,000 for any determination period beginning in 1996 or earlier; $160,000 for any determination period beginning in 1997, 1998, or 1999; and $170,000 for any determination period beginning in 2000 or 2001.

(h) Cost-of-living adjustment. The $200,000 limit on annual compensation in (g) above shall be adjusted for cost-of-living increases in accordance with Code §401(a)(17)(B). The cost-of-living adjustment in effect for a calendar year applies to annual compensation for the determination period that begins with or within such calendar year.

Definition of Final Average Monthly Compensation

Delete outdated historical information

Article 1, Section 1.23: Final Average Monthly Compensation

Final Average Monthly Compensation shall mean for Plan Years ending on or before December 31, 1994, the Participant’s average monthly rate of Compensation from the Employer for the 36 consecutive months out of the 120 months immediately preceding (1) the first day of the month coincident with or next following the date on which the Participant’s service terminates for any reason, or (2) the Participant’s Normal Retirement Date, whichever is earlier, which gives the highest average monthly rate of Compensation for the Participant. The Participant’s average monthly rate of Compensation will be determined by dividing the total Compensation received during the 36 consecutive month period by 36. Prior to January 1, 1993, the number of months for which the Employee received Compensation from the Employer will be computed to the extent the Employee was paid on other than a monthly basis, by determining the number of bi-weekly pay periods ending within the 36 consecutive month period for which the Employee received Compensation from the Employer and converting such pay periods into months by dividing the number thereof by 2 1/6. In computing Final Average Monthly Compensation for a Participant who has returned to the active service of the Employer following a full calendar year or calendar years during which the Employee did not receive regular Compensation from the Employer because of a Leave of Absence without pay granted by the Employer, or because of such Participant’s reemployment with a reinstatement of the Employee’s prior Vesting Service and Credited Service, the period during which the Employee did not receive regular Compensation from the Employer shall be excluded in determining the 120 months and the 36 consecutive months to be used in determining the Participant’s Final Average Monthly Compensation. Effective for Plan Years beginning on or after January 1, 1995 for Participants who terminate service with the Employer on or after January 1, 1995, Final Average Monthly Compensation shall mean the greater of (1) Final Average Monthly Compensation as of December 31, 1994, or (2) the Participant’s average annual Compensation from the Employer for three consecutive Plan Years out of the 10 Plan Years immediately preceding (i) the Participant’s termination of service for any reason or (ii) the
Participant’s Normal Retirement Date, whichever is earlier, which gives the highest average annual Compensation for the Participant, divided by 12.

Effective for Plan Years beginning on or after January 1, 2001, for Participants who terminate service with the Employer on or after January 1, 2001, Final Average Monthly Compensation shall mean the greater of (1) Final Average Monthly Compensation as of December 31, 1994, or (2) the Participant’s total Compensation from the Employer for three consecutive Plan Years out of the 10 Plan Years immediately preceding (i) the Participant’s termination of service for any reason or (ii) the Participant’s Normal Retirement Date, whichever is earlier, which gives the highest total Compensation for the Participant, plus any amounts received at termination for accrued personal leave, up to a maximum of 440 hours, and any amounts received at termination for accrued sick leave, up to a maximum of 400 hours, divided by 36, provided, however, that no amounts paid to a Participant shall be counted more than once for purposes of calculating Final Average Monthly Compensation.

Effective for Plan Years beginning on or after January 1, 2004, for Participants who terminate service with the Employer on or after January 1, 2004, Final Average Monthly Compensation shall mean the greater of (1) Final Average Monthly Compensation as of December 31, 1994, or (2) the Participant’s total Compensation from the Employer for three consecutive Plan Years out of the 10 Plan Years in which the Participant was employed immediately preceding (i) the Participant’s termination of service for any reason or (ii) the Participant’s Normal Retirement Date, whichever is earlier, which gives the highest total Compensation for the Participant, plus, for Participants hired before January 1, 2004, any amounts received at termination for accrued personal leave, up to a maximum of 440 hours, and any amounts received at termination for accrued sick leave, up to a maximum of 400 hours, divided by 36, provided, however, that no amounts paid to a Participant shall be counted more than once for purposes of calculating Final Average Monthly Compensation and Compensation shall be limited as required by Section 1.10(e). For purposes of determining consecutive Plan Years, Plan Years for which the Participant is not credited with at least 1,000 hours shall be ignored, and the Plan Year first preceding such year and the Plan Year first following such year for which the Participant is credited with at least 1,000 hours shall be considered consecutive Plan Years.

For Participants who take an In Service Distribution permitted under Section 5.7(b), for purposes of calculating that distribution, Final Average Monthly Compensation shall mean the greater of (1) Final Average Monthly Compensation as of December 31, 1994, or (2) the Participant’s total Compensation from the Employer for three consecutive Plan Years out of the 10 Plan Years in which the Participant was employed immediately preceding (i) the Participant’s In Service Distribution commencement date or (ii) the Participant’s Normal Retirement Date, whichever is earlier, which gives the highest total Compensation for the Participant, plus, for Participants hired before January 1, 2004, any amounts received as of the In Service Distribution commencement date for accrued personal leave, up to a maximum of 440 hours, and any amounts received as of the In Service Distribution commencement date for accrued sick leave, up to a maximum of 400 hours, divided by 36, provided, however, that no amounts paid to a Participant shall be counted more than once for purposes of calculating Final Average Monthly Compensation and Compensation shall be limited as required by Section 1.10(e). For purposes of determining consecutive Plan Years, Plan Years for which the Participant is not credited with at least 1,000 hours shall be ignored, and the Plan Year first preceding such year and the Plan Year first following such year for which the Participant is credited with at least 1,000 hours shall be considered consecutive Plan Years.
SECURE Act 2.0: required mandatory distributions

The SECURE Act 2.0 of 2022 increased the age required for mandatory distributions from retirement plans. To avoid revising Plan language every time the distribution age changes, Reinhart Boerner Van Deuren suggested referencing the applicable code section.

Reference IRS code section for required minimum distributions

Article 1, Section 1.41: Required Beginning Date

Required Beginning Date shall mean April 1 of the calendar year following the later of the calendar year in which the Participant attains the applicable age as defined in Code section 401(a)(9)(C)(v) age 72 (70-1/2 if the Participant attained age 70-1/2 prior to January 1, 2020) or the calendar year in which the Participant retires.

Article 5, Section 5.8(b)(ii)(A): Time and Manner of Distribution – Death of Participant Before Payments Begin

If the Participant's surviving Spouse is the Participant's sole designated Beneficiary, then distributions to the surviving Spouse may begin by December 31 of the calendar year immediately following the calendar year in which the Participant died, or at the option of the surviving Spouse by a date no later than December 31 of the calendar year in which the Participant would have attained the applicable age as defined in Code section 401(a)(9)(C)(v) age 72 (70-1/2 if the Participant would have attained age 70-1/2 prior to January 1, 2020), if later. Alternatively, the Participant's entire interest will be distributed to the designated Beneficiary by December 31 of the calendar year containing the fifth anniversary of the Participant's death. If the surviving Spouse dies after the Participant but before distributions to either the Participant or the surviving Spouse begin, this alternative will apply as if the surviving Spouse were the Participant.

Internal Revenue Code (IRC) Section 415 dollar limitations

The Plan is subject to internal revenue service provisions that define the maximum allowable annual benefit participants may receive under the Plan. In 2022, the Plan’s actuary, Willis Towers Watson, recommended and the board of directors approved a modification to the Plan to allow for a retiree whose benefit is subject to an IRC Section 415 dollar limitation to receive benefit increases as the limit increases. After further review, Willis Towers Watson identified additional modifications to the language in the Plan’s Maximum Amount of Benefits section to correctly calculate the maximum benefit.

Modify Maximum Amount of Benefits language to correctly calculate the maximum benefit

Article 4, Section 4.1: Maximum Amount of Benefits

The Annual Benefit otherwise payable to a Participant under the Plan at any time shall not exceed the Maximum Permissible Benefit (defined below). If the benefit the Participant would otherwise accrue in a Limitation Year would produce an Annual Benefit in excess of the Maximum Permissible Benefit, the benefit shall be limited (or the rate of accrual reduced) to a benefit that does not exceed the Maximum Permissible Benefit. If a Participant is, or has ever been, covered under more than one defined benefit Plan maintained by the Employer, the sum of the Participant’s Annual Benefits from all defined benefit plans may not exceed the Maximum Permissible Benefit. The sum of a Participant’s Annual Benefit from the Plan and any other includable arrangements shall not exceed the Defined Benefit Dollar
Limitation as defined herein and Internal Revenue Code section 415(b). The Maximum Permissible Benefit and the Defined Benefit Dollar Limitation applicable to any Participant shall be determined or recalculated, as necessary, on an annual basis.

• Defined Benefit Plan amendment
• Resolution 14-23: Defined Benefit Plan amendment
The Platte River Power Authority Defined Benefit Plan as amended December 8, 2022 and restated effective January 1, 2023 (the Plan) provides Platte River Power Authority (the Employer) with the power and right to amend the Plan.

The Employer amends the Plan by the adoption of the following amendments:

1) Article 1, Section 1.10 of the Plan relating to the definition of Compensation is amended to read as follows, effective January 1, 2024:

1.10 Compensation shall mean, subject to the limitations in Subsections (d) and (e):

(a) for Plan Years beginning on or after January 1, 2000, wages paid by the Employer for which the Employer is required to furnish the Participant a written statement under Code §§6041(d), 6051(a)(3), and 6052 adjusted as follows:

(i) any amounts contributed by an Employer on the Participant’s behalf under a salary reduction agreement or designated as an employee contribution and not includable in the gross income of the Employee under Code §§125, 132(f), 402(g), 402(h), 414(h), 457, or 403(b) will be included;

(ii) to the extent described in Section 1.23, accumulated personal leave and sick pay amounts paid upon termination of employment or upon commencement of an In-Service Distribution will be included only for Participants whose Employment Commencement Date occurred prior to January 1, 2004;

(iii) all of the following will be excluded:

(A) expense reimbursements and allowances;

(B) all taxable fringe benefits, including but not limited to gainsharing and bonuses;

(C) moving expenses;

(D) short-term disability payments;

(E) long-term disability payments;

(F) non-qualified deferred compensation;

(G) severance pay; and

(H) wellness initiatives.
(iv) for Participants whose Employment Commencement Date occurred on or after January 1, 2004, all of the following shall be excluded in addition to items excluded under (iii) above:

(A) overtime other than regularly scheduled overtime;

(B) payouts at termination or upon commencement of an In Service Distribution for Compensatory Time Off (CTO).

(v) for Participants whose Employment Commencement Date occurred on or after January 1, 2008, all of the following shall be excluded in addition to items excluded under (iii) and (iv) above:

(A) payouts at termination or upon commencement of an In Service Distribution for Wellness Leave;

(B) payouts at termination or upon commencement of an In Service Distribution for Recognition Leave.

(b) for Plan Years beginning on or after January 1, 1995, and ending on or before December 31, 1999, wages paid by the Employer that constitute wages within the meaning of Code §3401 or qualify as a payment of compensation for which the Employer is required to furnish the Participant a written statement under Code §§6041(d), 6051(a)(3), and 6052 adjusted as follows:

(i) any amounts contributed by an Employer on the Participant’s behalf under a salary reduction agreement or designated as an Employee contribution and not includable in the gross income of the Employee under Code §§125, 402(g), 402(h), 414(h), 457, or 403(b) will be included;

(ii) all of the following will be excluded:

(A) reimbursements and other expense allowances;

(B) all taxable fringe benefits except group term life insurance premiums;

(C) moving expenses; and

(D) currently taxable deferred compensation and welfare benefits included as wages within the meaning of Code §3401.

(c) for Plan Years prior to January 1, 1995, the compensation paid to a Participant by the Employer, for the applicable calendar year that would be subject to tax (for the purpose of the Federal Insurance Contribution Act) under Code §3101(a), without the dollar limitation of §3121(a)(1).
(d) for any Participant who became a Participant on or before December 31, 1995, the annual compensation taken into account under this Plan for any calendar year will not exceed the adjusted annual compensation limit under Code §401(a)(17) as of July 1, 1993, which shall not be less than $235,840 as adjusted annually by the Secretary of the Treasury to reflect cost of living changes.

(e) subject to (d) above, for Plan Years beginning after December 31, 2001, the annual compensation of each Participant taken into account in determining benefits provided under the Plan for any determination period shall not exceed $200,000, as adjusted for cost-of-living increases in accordance with Code §401(a)(17)(B). The cost-of-living adjustment in effect for a calendar year applies to annual compensation for the determination period that begins with or within such calendar year. Annual compensation means compensation during the Plan Year or such other consecutive 12-month period over which compensation is otherwise determined under the Plan (the determination period). If a determination period consists of fewer than 12 months, the annual compensation limit will be multiplied by a fraction, the numerator of which is the number of months in the determination period, and the denominator of which is 12. If compensation for any prior period is taken into account in determining a Participant’s benefits for the current Plan Year, the compensation for such prior determination period is subject to the applicable annual compensation limit in effect for that prior period.

2) Article 1, Section 1.23 of the Plan relating to Final Average Monthly Compensation is amended to read as follows, effective January 1, 2024:

1.23 Final Average Monthly Compensation shall mean the greater of (1) Final Average Monthly Compensation as of December 31, 1994, or (2) the Participant’s total Compensation from the Employer for three consecutive Plan Years out of the 10 Plan Years in which the Participant was employed immediately preceding (i) the Participant’s termination of service for any reason or (ii) the Participant’s Normal Retirement Date, whichever is earlier, which gives the highest total Compensation for the Participant, plus, for Participants hired before January 1, 2004, any amounts received at termination for accrued personal leave, up to a maximum of 440 hours, and any amounts received at termination for accrued sick leave, up to a maximum of 400 hours, divided by 36, provided, however, that no amounts paid to a Participant shall be counted more than once for purposes of calculating Final Average Monthly Compensation and Compensation shall be limited as required by Section 1.10(e). For purposes of determining consecutive Plan Years, Plan Years for which the Participant is not credited with at least 1,000 hours shall be ignored, and the Plan Year first preceding such year and the Plan Year first following such year for which the Participant is credited with at least 1,000 hours shall be considered consecutive Plan Years.

For Participants who take an In Service Distribution permitted under Section 5.7(b), for purposes of calculating that distribution, Final Average Monthly Compensation
shall mean the greater of (1) Final Average Monthly Compensation as of December 31, 1994, or (2) the Participant’s total Compensation from the Employer for three consecutive Plan Years out of the 10 Plan Years in which the Participant was employed immediately preceding (i) the Participant’s In Service Distribution commencement date or (ii) the Participant’s Normal Retirement Date, whichever is earlier, which gives the highest total Compensation for the Participant, plus, for Participants hired before January 1, 2004, any amounts received as of the In Service Distribution commencement date for accrued personal leave, up to a maximum of 440 hours, and any amounts received as of the In Service Distribution commencement date for accrued sick leave, up to a maximum of 400 hours, divided by 36, provided, however, that no amounts paid to a Participant shall be counted more than once for purposes of calculating Final Average Monthly Compensation and Compensation shall be limited as required by Section 1.10(e). For purposes of determining consecutive Plan Years, Plan Years for which the Participant is not credited with at least 1,000 hours shall be ignored, and the Plan Year first preceding such year and the Plan Year first following such year for which the Participant is credited with at least 1,000 hours shall be considered consecutive Plan Years.

3) Article 1, Section 1.41 of the Plan relating to Required Beginning Date is amended to read as follows, effective January 1, 2023:

1.41 Required Beginning Date shall mean April 1 of the calendar year following the later of the calendar year in which the Participant attains the applicable age as defined in Code section 401(a)(9)(C)(v) or the calendar year in which the Participant retires.

4) Article 4, Section 4.1 of the Plan relating to the maximum amount of benefits is amended to read as follows, effective January 1, 2024:

4.1 Maximum Amount of Benefits. The sum of a Participant’s Annual Benefit from the Plan and any other includable arrangements shall not exceed the Defined Benefit Dollar Limitation as defined herein and Internal Revenue Code section 415(b). The Maximum Permissible Benefit and the Defined Benefit Dollar Limitation applicable to any Participant shall be determined or recalculated, as necessary, on an annual basis.

5) Article 5, Section 5.8(b)(ii)(A) of the Plan relating to Time and Manner of Distribution – Death of Participant Before Payments Begin is amended to read as follows, effective January 1, 2023:

(A) If the Participant’s surviving Spouse is the Participant’s sole designated Beneficiary, then distributions to the surviving Spouse may begin by December 31 of the calendar year immediately following the calendar year in which the Participant died, or at the option of the surviving Spouse by a date no later than December 31 of the calendar year in which the Participant would have attained the applicable age as defined in Code section 401(a)(9)(C)(v), if later. Alternatively, the Participant’s entire interest will be distributed to the designated Beneficiary by
December 31 of the calendar year containing the fifth anniversary of the Participant's death. If the surviving Spouse dies after the Participant but before distributions to either the Participant or the surviving Spouse begin, this alternative will apply as if the surviving Spouse were the Participant.

PLATTE RIVER POWER AUTHORITY

By: ________________________

Title: General Manager/CEO

Date: ________________________
RESOLUTION NO. 14-23

Background

A. Platte River Power Authority (Platte River) maintains the Platte River Power Authority Defined Benefit Plan (Plan).

B. At its October 2023 meeting, the Retirement Committee established under the Plan approved the following:

1. Attorney-recommended modifications to the definition of compensation to clarify that gainsharing and bonuses are excluded from the definition and to the definitions of compensation and final average monthly compensation to delete outdated historical information.

2. Attorney-recommended modifications to provisions used to determine when a participant’s Plan payments must begin—specifically, the beginning date and time and manner of distributions used when a participant dies before payments begin. The changes reference the applicable Internal Revenue Code (IRC) section when determining the participant age required for mandatory distributions from retirement plans as dictated by the SECURE Act 2.0 of 2022.

3. An actuary-recommended update to the definition of maximum permissible benefit used to calculate a retiree’s benefit that is subject to IRC Section 415 dollar limitation, clarifying the calculation of the maximum benefit.

C. To change these Plan sections as approved by the Retirement Committee, the board must amend the Plan.

D. The Retirement Committee recommends in a memorandum prepared by staff dated November 29, 2023, that the board adopt the attached amendments to the Plan.
Resolution

The board of directors of Platte River Power Authority adopts and approves the attached amendments to the Platte River Power Authority Defined Benefit Plan.

AS WITNESS, I have signed my name as Secretary and have affixed the corporate seal of the Platte River Power Authority this 7th day of December, 2023.

______________________________
Secretary

Adopted:
Vote:
Memorandum

Date: 11/29/2023

To: Board of directors

From: Jason Frisbie, general manager and chief executive officer  
Julie Depperman, director, treasury services (defined contribution committee chair)  
Libby Clark, director, human resources & safety  
Caroline Schmiedt, senior counsel

Subject: Platte River Power Authority Defined Contribution Plan amendment

The Defined Contribution Plan Committee recommends the board adopt the attached resolution amending the Platte River Power Authority Defined Contribution Plan (Plan).

Platte River is required to periodically review the Plan to ensure it remains compliant with current law and IRS regulations. The Plan’s outside pension counsel from Reinhart Boerner Van Deuren thoroughly reviewed the Plan document and recommended the attached amendments to implement the following modifications (highlighted in green) to:

- clarify the definition of earnings;
- update references to the required minimum distribution age under the SECURE Act 2.0; and
- clarify the use of forfeiture funds.

Definition of Earnings

Define Earnings as the Participant’s hourly rate of pay multiplied by 80 for each two-week period. The current Plan ties Earnings to the Employee Status Notification, which Platte River no longer uses.

Article II, Section 2.1[f]: Earnings

“Earnings” means the Participant’s hourly rate of pay multiplied by 80 for each two-week pay period salary reported to the Participant on the Employee Status Notification then in effect. The maximum annual Earnings taken into account under the Plan for Plan Years beginning on and after the Effective Date of the Plan shall not exceed $245,000 as adjusted by the Secretary of the Treasury for increases
in the cost-of-living in accordance with Code Section 401(a)(17)(B). The cost-of-living adjustment in effect for a calendar year applies to any period, not exceeding 12 months, over which annual Earnings are determined (determination period) that begins in the calendar year. If a determination period consists of fewer than 12 months, the annual limit on Earnings will be multiplied by a fraction, the numerator of which is the number of months in the determination period, and the denominator of which is 12.

**SECURE Act 2.0: required mandatory distributions**

The SECURE Act 2.0 of 2022 increased the age required for mandatory distributions from retirement plans. To avoid revising Plan language every time the distribution age changes, Reinhart Boerner Van Deuren suggested referencing the applicable code section.

**Reference IRS code section for required minimum distributions**

**Article II, Section 2.1[z]: Required Beginning Date**

"Required Beginning Date" means April 1 of the calendar year following the calendar year in which occurs the later of [1] the date the Participant attains the applicable age as defined in Code section 401(a)(9)(C)(v) age 72 (70-1/2 if the Participant attained age 70-1/2 prior to January 1, 2020), or [2] the date the Participant retires from employment with the Employer.

**Article VII, Section 7.3[a]: Payment of Death Benefits**

Payment of Death Benefits. If a Participant dies before receiving distribution of his entire vested Account, any unpaid balance will be distributed to the Participant's beneficiary in the distribution form elected by the Participant (or if no election is made by the Participant, in a single lump sum payment) as soon as practicable after the Participant's death. The distributable amount will be determined as of the Valuation Date coincident with or next preceding the distribution. Provided, however, that if the Participant's surviving Spouse is the Participant's sole beneficiary, the surviving Spouse may elect to defer distributions to a date no later than December 31 of the calendar year in which the Participant would have attained the applicable age as defined in Code section 401(a)(9)(C)(v) age 72 (70-1/2 if the Participant would have attained age 70-1/2 prior to January 1, 2020).

**Article VII, Section 7.6[a][ii][B](i): Required Distributions from the Trust – Death of Participant Before Distributions Begin**

If the Participant's surviving Spouse is the Participant's sole Designated Beneficiary, then distributions to the surviving Spouse will begin by December 31 of the calendar year immediately following the calendar year in which the Participant died, or at the option of the surviving Spouse by a date no later than December 31 of the calendar year in which the Participant would have attained the applicable age as defined in Code section 401(a)(9)(C)(v) age 72 (70-1/2 if the Participant would have attained age 70-1/2 prior to January 1, 2020).
Use of forfeiture funds

Clarify that forfeiture funds may be used to pay Plan administrative expenses and describe the timing for applying forfeiture funds.

Article VI, Section 6.1[d]: Suspense Account for Unallocated Forfeitures

[d] Suspense Account for Unallocated Forfeitures. In the event that the amount of forfeitures used to reduce the Employer’s contributions and to be allocated to any Participant’s Account would exceed the annual addition limitations, the Employer may use forfeitures to pay Plan administrative expenses. In the event there are additional forfeitures, a separate suspense account shall be established to hold such unallocated forfeitures for any year or years provided that:

[i] no Employer Contributions may be made at any time when their allocation would be precluded by Section 415 of the Code;

[ii] investment gains and losses and other income are not allocated to the suspense account; and

[iii] the amounts in the suspense account are allocated under Subsection [c] as of each allocation date on which forfeitures may be allocated until the suspense account is exhausted; and

[iv] all forfeitures will be used to reduce the Employer’s contributions or pay Plan administrative expenses no later than 12 months following the close of the Plan Year in which the forfeitures are incurred.

In the event of Plan termination, the balance of such suspense account may revert to the Employer.

- Defined Contribution Plan amendment
- Resolution 15-23: Defined Contribution Plan amendment
The Platte River Power Authority Defined Contribution Plan as amended December 8, 2022 and restated effective January 1, 2023 (the Plan) provides Platte River Power Authority (the Employer) with the power and right to amend the Plan.

The Employer amends the Plan by the adoption of the following amendments:

1) **Section 2.1[f] of the Plan is amended to read as follows, effective January 1, 2023:**

   
   “Earnings” means the Participant’s hourly rate of pay multiplied by 80 for each two-week pay period. The maximum annual Earnings taken into account under the Plan for Plan Years beginning on and after the Effective Date of the Plan, shall not exceed $245,000 as adjusted by the Secretary of the Treasury for increases in the cost-of-living in accordance with Code Section 401(a)(17)(B). The cost-of-living adjustment in effect for a calendar year applies to any period, not exceeding 12 months, over which annual Earnings are determined (determination period) that begins in the calendar year. If a determination period consists of fewer than 12 months, the annual limit on Earnings will be multiplied by a fraction, the numerator of which is the number of months in the determination period, and the denominator of which is 12.

2) **Section 2.1[z] of the Plan is amended to read as follows, effective January 1, 2023:**

   "Required Beginning Date” means April 1 of the calendar year following the calendar year in which occurs the later of [1] the date the Participant attains the applicable age as defined in Code section 401(a)(9)(C)(v), or [2] the date the Participant retires from employment with the Employer.

3) **Section 6.1[d] of the Plan is amended to read as follows, effective January 1, 2024.**

   Suspense Account for Unallocated Forfeitures. In the event that the amount of forfeitures used to reduce the Employer’s contributions and to be allocated to any Participant’s Account would exceed the annual addition limitations, the Employer may use forfeitures to pay Plan administrative expenses. In the event there are additional forfeitures, a separate suspense account shall be established to hold such unallocated forfeitures for any year provided that:

   [i] no Employer Contributions may be made at any time when their allocation would be precluded by Section 415 of the Code;

   [ii] investment gains and losses and other income are not allocated to the suspense account;

   [iii] the amounts in the suspense account are allocated under Subsection [c] as of each allocation date on which forfeitures may be allocated until the suspense account is exhausted; and
[iv] all forfeitures will be used to reduce the Employer’s contributions or pay Plan administrative expenses no later than 12 months following the close of the Plan Year in which the forfeitures are incurred.

In the event of Plan termination, the balance of such suspense account may revert to the Employer.

4) Section 7.3[a] of the Plan is amended to read as follows, effective January 1, 2023:

[a] Payment of Death Benefits. If a Participant dies before receiving distribution of his entire vested Account, any unpaid balance will be distributed to the Participant's beneficiary in the distribution form elected by the Participant (or if no election is made by the Participant, in a single lump sum payment) as soon as practicable after the Participant's death. The distributable amount will be determined as of the Valuation Date coincident with or next preceding the distribution. Provided, however, that if the Participant's surviving Spouse is the Participant's sole beneficiary, the surviving Spouse may elect to defer distributions to a date no later than December 31 of the calendar year in which the Participant would have attained the applicable age as defined in Code section 401(a)(9)(C)(v).

5) Section 7.6[a][ii][B](i) of the Plan is amended to read as follows, effective January 1, 2023:

(i) If the Participant's surviving Spouse is the Participant's sole Designated Beneficiary, then distributions to the surviving Spouse will begin by December 31 of the calendar year immediately following the calendar year in which the Participant died, or at the option of the surviving Spouse by a date no later than December 31 of the calendar year in which the Participant would have attained the applicable age as defined in Code section 401(a)(9)(C)(v).

ATTEST: PLATTE RIVER POWER AUTHORITY

____________________________________
Secretary

PLATTE RIVER POWER AUTHORITY

By:

____________________________________
Title:

____________________________________
Date:
RESOLUTION NO. 15-23

Background

A. Platte River Power Authority (Platte River) maintains the Platte River Power Authority Defined Contribution Plan (Plan).

B. At its November 2023 meeting, the Defined Contribution Plan Committee established under the Plan approved the following:

1. Attorney-recommended modifications to the definition of compensation to clarify the definition of earnings by removing references to a report Platte River no longer uses.

2. Attorney-recommended modifications to provisions used to determine when a participant’s Plan payments must begin—specifically, the required beginning date and time and manner of distributions used when a participant dies before payments begin. The changes reference the applicable Internal Revenue Code section when determining the participant age required for mandatory distributions from retirement plans as dictated by the SECURE Act 2.0 of 2022.

3. Attorney-recommended modifications to a provision governing use and timing of forfeiture funds.

C. To change these Plan sections as approved by the Defined Contribution Plan Committee, the board must amend the Plan.

D. The Defined Contribution Plan Committee recommends in a memorandum prepared by staff dated November 29, 2023, that the board adopt the attached amendments to the Plan.
RESOLUTION NO. 15-23

Resolution

The board of directors of Platte River Power Authority adopts and approves the attached amendments to the Platte River Power Authority Defined Contribution Plan.

AS WITNESS, I have signed my name as Secretary and have affixed the corporate seal of the Platte River Power Authority this 7th day of December, 2023.

Memorandum

Date: 11/29/2023
To: Board of Directors
From: Jason Frisbie, general manager and chief executive officer
        Dave Smalley, chief financial officer and deputy general manager
        Shelley Nywall, director of finance
        Jason Harris, senior manager, financial reporting and budget

Subject: 2023 budget contingency appropriation transfer

As mentioned in the October management report, Platte River needs to move contingency funds to cover above-budget expenditures in 2023. Various situations can arise during the year that require additional funds above budgeted amounts. While less common for operating expenses and debt service expenditures, this is not uncommon for capital additions. Typically, there are several requests for projects that are out of budget or require additional funds. The capital project requests go through a formal submission, review and approval process, with final approval by the general manager. Frequently, and as occurred in 2023, the new requests can be managed and absorbed in the current budget because other projects are canceled or completed under budget.

In 2023, debt service expenditures require additional funds. Operating expenses and capital additions are not projected to be above budget, but may require additional funds if expenses at year end unexpectedly exceed the appropriated budget.

Debt service expenditures

Based on the most recent trends and assumptions, staff projects debt service expenditures will be approximately $0.6 million above budget. As discussed in the financial report, Platte River is subject to subscription reporting under GASB 96 Subscription-Based Information Technology Arrangements. Payments for implemented right-to-use subscription assets will be presented as debt service expenditures rather than capital additions. Because these were budgeted as capital additions, the 2023 Strategic Budget did not appropriate debt service expenditures for these transactions. As actual results are uncertain, staff has included an additional amount.
Summary

After year-end close, only the final amount needed to fund operating expenses, capital additions and debt service expenditures will be transferred. This approach avoids moving funds that are not needed. Staff will report the actual amounts transferred at the February 2024 board meeting. If amounts needed are higher than anticipated, staff will present additional information and a second resolution.

The table below summarizes the contingency appropriation transfer request.

Resolution No. 15-22 adopting the Strategic Budget for fiscal year 2023 included a contingency appropriation of $52 million. Through the attached resolution, staff requests an amount not to exceed $5 million to be re-appropriated to operating expenses, capital additions and debt service expenditures based on final 2023 financial results. Included is a description of the budget contingency with a 10-year history of the amount budgeted each year and the purposes of the transfers, when applicable.

Staff will be available at the board meeting to answer questions.

Attachment

- Resolution 16-23: 2023 budget contingency appropriation transfer
Budget contingency

The budget contingency can be used to meet expenditures not foreseen when the budget was prepared. Events that may require contingency funds include unplanned generation or transmission outages, significant increases in power market or natural gas prices, unplanned expenses to maintain power supply to the owner communities or the adoption of an accounting policy that alters expenditures. Contingency may also be used for existing capital projects that require expenditures above those budgeted due to scheduling changes, payment timing differences, changes in work scope, price fluctuations or new projects best started before the next budget year. A contingency transfer is not unusual for capital projects. Before transferring contingency to an expense category, staff must notify the board and present a proposed resolution. Before 2018, the budgeted contingency appropriation was a fixed amount. From 2019 to 2022, the amount was approximately 10% of the operating expenses and capital additions to align with fluctuations in the budget. Beginning in 2023, the contingency appropriation amount increased to approximately 20% of operating expenses and capital additions to help Platte River manage increased uncertainty in future budgets related to the resource transition plan and organized energy market activities.

(1) Total not-to-exceed amount requested at the December 2023 board of directors meeting.
RESOLUTION NO. 16-23

Background

A. The 2023 Strategic Budget for Platte River Power Authority (Platte River) contains a budget contingency appropriation of $52 million.

B. As explained in the memorandum dated Nov. 29, 2023 (memo), Platte River projects higher-than-budgeted debt service expenditures during 2023, due to expected impacts of implementing the GASB Statement No. 96, *Subscription-Based Information Technology Arrangements*, accounting standard.

C. As further explained in the memo, operating expenses and capital additions are not projected to be above budget, but may require additional funds if year-end expenses unexpectedly exceed the appropriated budget.

D. Although final numbers will be unclear until year end, Platte River accounting staff anticipates 2023 above-budget operating expenses, capital additions and debt service expenditures will not exceed $5 million. Management recommends the board of directors re-appropriate, from the budget contingency appropriation category for 2023, funds not to exceed $5 million, of which portions would be transferred to the operating expense, capital additions and debt service expenditures categories as needed. These transfers would enable Platte River to fully fund any above-budget expenditures.

Resolution

The board of directors of Platte River Power Authority therefore resolves that funds, not to exceed $5 million, be transferred from the budget contingency appropriation category in the 2023 Strategic Budget to the operating expense, capital additions and debt service expenditures categories based on final 2023 financial results.

AS WITNESS, I have executed my name as secretary and have affixed the corporate seal of the Platte River Power Authority this 7th day of December, 2023.

Memorandum

Date: 11/29/2023

To: Board of Directors

From: Jason Frisbie, general manager and chief executive officer
        Dave Smalley, chief financial officer and deputy general manager
        Shelley Nywall, director of finance
        Jason Harris, senior manager, financial reporting and budget

Subject: 2024 Strategic Budget review and adoption

Thank you for your engagement and support through the budget process. The steps in the budget process included a budget work session on Sept. 28, 2023 and a public hearing with review of the proposed budget on Oct. 26, 2023. The budget is now in final form and ready for adoption.

The final budget includes total revenues of $313 million and total expenditures of $356.6 million, including a board contingency appropriation of $56 million. Change in net position is projected to be $7.3 million, after deferring $14 million of revenues under the board-approved deferred revenue and expense accounting policy. The fixed obligation charge coverage ratio is projected to be at 1.89 times.

Attached is a proposed resolution to adopt the 2024 Strategic Budget and appropriate funds for 2024 expenditures. A copy of the 2024 Strategic Budget document is included with your board materials and is available on Platte River’s website. After approval, the final version will be printed, bound and distributed.

As discussed during the October board meeting, additional changes to the budget were expected. The table below provides a high-level description of the items that changed. Staff will review the changes and provide a brief overview of final budget results at the December meeting.

As Platte River navigates and refines its resource transition plan, additional out-of-budget requests may arise in 2024. Platte River may need to request contingency funds to cover these expenses.

Staff recommends the board adopt the 2024 Strategic Budget as submitted and will be available at the board meeting to answer any questions.
The following table summarizes the 2024 Strategic Budget and outlines impacts from the current changes made to the budget.

- Budget-at-a-glance
- 2024 Strategic Budget document
- Resolution 17-23: 2024 Strategic Budget and Appropriation
The Platte River Power Authority 2024 Strategic Budget, produced under the direction of the organization’s leadership, aligns with the long-range strategic plan to provide community leaders, stakeholders and the public with a transparent roadmap of Platte River’s tactical, operational and capital plans for the coming year.

The foundation for Platte River’s 2024 budget represents ongoing investments to transform the organization based on its strategic initiatives and core operations. These reflect Platte River’s foundational pillars of system reliability, environmental responsibility and financial sustainability. The pillars guide the decision making process that directs the resource allocations, revenues and expenses detailed in the budget.

Expenses are managed from a broad perspective with the goal of operating the system in a safe, compliant and reliable manner while expanding environmental stewardship. Platte River communicates and collaborates with the owner communities to align processes and outcomes for the benefit of all customers.

Platte River’s budget includes $313 million in revenues and $300.6 million in expenditures, consisting of operating, capital and debt. Of the $281.9 million in operating expenses and capital additions, approximately 85% and 15% are allocated to activities supporting core operations and strategic initiatives, respectively.
### Strategic initiatives
$42.1 million, 15% of operating and capital
- Resource diversification planning and integration, $28 million, 10%
- Community partner and engagement, $2.2 million, 1%
- Workforce culture, $2.1 million, 1%
- Process management and coordination, $9.8 million, 3%

### Activities
- Aeroderivative combustion turbine design and air permitting
- Noncarbon resources infrastructure and planning
- Distributed energy resources, including distributed energy resources management software, beneficial electrification and program development
- 2024 integrated resource plan development, Southwest Power Pool Regional Transmission Organization West planning and operational flexibility
- Public engagement for the Resource Diversification Policy, integrated resource plan, distributed energy resources and distributed energy solutions programs
- Workforce evolution and development
- Enterprise resource planning system, enterprise risk management and project management

### Core operations
$239.8 million, 85% of operating and capital
- Generation, including fuel, $130 million, 46%
- Energy purchases including wind, hydropower and solar energy, $63.8 million, 23%
- Transmission, $36 million, 12%
- Energy efficiency programs, $10 million, 4%

### Activities
- Rawhide Energy Station and Craig Generating Station preventive, proactive maintenance and capital improvements for reliability, safety, efficiency and environmental compliance
- Proactive capital investments including combustion turbine projects, Trapper Mine reclamation, transmission line rebuild, transformer replacements, fiber optic replacement and expansion
- Continued generation from wind and solar resources under power purchase agreements
- Ongoing operations and maintenance of the transmission system
- Energy efficiency programs
- Staffing additions to support organization changes and strategic initiatives

---

### Operating expenses and capital additions
- **$281.9 million**
  - Core operations **85%**
  - Strategic initiatives **15%**

After more than 50 years of providing reliable, environmentally responsible and financially sustainable energy and services (the foundational pillars of the organization), Platte River Power Authority and our owner communities of Estes Park, Fort Collins, Longmont and Loveland continue to lead the energy transition in Northern Colorado. As challenges and opportunities arise on our path toward a noncarbon energy future, our organizations remain committed to each other and focused on the customers we serve.

The Resource Diversification Policy (RDP) adopted in 2018 continues to serve as our North Star. This 2024 Strategic Budget reflects the current investments needed to proactively decarbonize our portfolio while maintaining our foundational pillars and includes developing and expanding our workforce in the areas of legal, contracts, data analytics, settlements and trading as we transition to a more integrated organization. The budget also aligns with the updated strategic initiatives established by Platte River’s Board of Directors and senior leadership team in 2023.

We plan more than $300.6 million in expenditures, with approximately 85% of operating and capital budgets allocated to core operations and 15% contributing to strategic initiatives. These investments reflect the accelerated integration of noncarbon resources and the installation of aeroderivative combustion turbines to support the increasing number of renewable energy facilities on Platte River’s system.

The 2024 Strategic Budget includes tariff charges reflecting a budgeted 5% average wholesale rate increase. The increase is part of a multiyear strategy to minimize rate volatility in support of our continued trajectory as we journey toward a noncarbon energy future. As we move forward, we will continue to evaluate our rate strategy to maintain financial sustainability and work with Platte River’s Board of Directors if adjustments are needed to fulfill the RDP.

Construction of the 150 megawatt (MW) Black Hollow Sun project continues in 2024 following numerous setbacks during the COVID-19 pandemic. We expect to sign a power purchase agreement (PPA) for our next solar and storage project in late 2023 or early 2024, increasing future renewable energy on our system. We are also moving forward with development of aeroderivative combustion turbines to help maintain system reliability while enabling deeper decarbonization as we wait for long-duration storage technology to mature and for distributed energy resources (DER) to be deployed in our owner communities and aggregated into a virtual power plant (VPP).

Developing and integrating DER in our owner communities is fundamental to our progress toward the RDP. Successful integration of DER will enable us to accurately forecast how DER operate. This will improve our ability to manage costs to serve load and leverage DER flexibility to provide energy and reliability services to the market.

In 2024, we will celebrate 10 years of the Efficiency Works™ program, a successful collaboration between the four owner communities and Platte River. Since 2014, Platte River and the owner communities have invested over $70 million in the Efficiency Works program, bringing cumulative energy savings of approximately 269,000 megawatt-hours (MWh), about 1% of Platte River’s load, and cumulative demand reduction of 38 MW. In 2024, the Efficiency Works program will continue evolving into distributed energy solutions (DES) to support our joint DER efforts.
Platte River has operated in Southwest Power Pool (SPP) Western Energy Imbalance Service (WEIS) market since April 2023. In this time, we have observed reductions in capacity factors on our baseload facilities when renewable resource output in the market is high; conversely, we have seen volatile market pricing when loads are high and renewable output is low. These market conditions represent significant changes to our operations. This budget reflects the ongoing investments required to operate in this new environment. As we continue navigating WEIS, we are also preparing for entry into the SPP Regional Transmission Organization West (RTO West) in 2026.

In 2024, we will celebrate the 40th anniversary of the Rawhide Energy Station, which began with the commercial operation of Rawhide Unit 1 in 1984. Since startup, Rawhide Unit 1 has operated as a baseload unit, produced over 77 million MWh of energy with a lifetime capacity factor of 84% and has been recognized with numerous awards for operational and environmental performance. Going forward, the unit must operate more flexibly. Our team is successfully using plant modernization investments to maximize renewable energy during periods of high output and help buffer us from volatile market pricing during high loads and low renewable output.

With the unit’s closure date planned for Dec. 31, 2029, we determined the next scheduled major maintenance outage can be moved from 2024 to 2025, reducing duration and costs of a future outage.

Despite challenges and setbacks, Platte River and our owner communities continue to work together toward the same goal. We are relentless and responsible in our pursuit of a noncarbon energy future. We will be transparent with our owner communities and their customers and will need their support and engagement to achieve our energy transition. With more than a half-century of experience as a community-owned, public power provider, we have a proven track record of success, and we can apply what we have learned as we move forward together in this new energy era.

Reuben Bergsten

Hydropower capacity is estimated and may vary with drought conditions.

For the effective load carrying capability (ELCC) calculation, wind facilities are assigned firm capacity of 22% of their nameplate capacity and solar facilities are assigned 42% of their nameplate capacity. Platte River is also using a 2 MWh battery charged by solar.

72 MW of wind is currently sold to other entities, 60 MW of which will return to Platte River in 2030.

(2) For the effective load carrying capability (ELCC) calculation, wind facilities are assigned firm capacity of 22% of their nameplate capacity and solar facilities are assigned 42% of their nameplate capacity. Platte River is also using a 2 MWh battery charged by solar.

(3) 72 MW of wind is currently sold to other entities, 60 MW of which will return to Platte River in 2030.

Noncarbon emitting resources will represent 35.9% of Platte River’s 2024 energy portfolio.

### 2024 system total

- Coal 43.6%
- Wind 24.6%
- Other purchases 17.4%
- Hydropower 8.9%
- Natural gas 3.1%
- Solar 2.4%

Includes renewable energy certificate (REC) allocations to carbon resources.

Due to drought conditions, not all hydropower may be considered noncarbon.
VISION, MISSION AND VALUES

VISION

To be a respected leader and responsible power provider improving the region’s quality of life through a more efficient and sustainable energy future.

MISSION

While driving utility innovation, Platte River will safely provide reliable, environmentally responsible and financially sustainable energy and services to the owner communities of Estes Park, Fort Collins, Longmont and Loveland.
VALUES
The following values define our daily commitment to following the vision and mission of Platte River, which will strengthen our organization and improve the quality of life in the communities we serve.

SAFETY
Without compromise, we will safeguard the public, our employees, contractors and assets we manage while fulfilling our mission.

INNOVATION
We will proactively deliver creative solutions to generate best-in-class products, services and practices.

INTEGRITY
We will conduct business equitably, transparently and ethically while complying fully with all regulatory requirements.

RESPECT
We will embrace diversity and a culture of inclusion among employees, stakeholders and the public.

SUSTAINABILITY
We will help our owner communities thrive while working to protect the environment we all share.

SERVICE
As a respected leader and responsible energy partner, we will empower our employees to provide energy and superior services to our owner communities.

OPERATIONAL EXCELLENCE
We will strive for continuous improvement and superior performance in all we do.
OUR COMMUNITIES

Platte River Power Authority is a Colorado political subdivision established to provide wholesale electric generation and transmission to the communities of Estes Park, Fort Collins, Longmont and Loveland.

**Town of Estes Park**
- Estimated population*: 5,904
- Annual customers: 11,000
- Utility: Estes Park Power and Communications, established in 1945

**City of Longmont**
- Estimated population*: 98,885
- Annual customers: 42,863
- Utility: Longmont Power & Communications, established in 1912

*Based on the U.S. Census Bureau 2020 Decennial Census data
City of Loveland
Estimated population*: 76,378
Annual customers: 39,782
Utility: Loveland Water and Power, established in 1925

City of Fort Collins
Estimated population*: 169,810
Annual customers: 78,450
Utility: Fort Collins Utilities, established in 1938
BOARD OF DIRECTORS

Platte River is governed by an eight-person board of directors designed to bring relevant expertise to the decision making process. The board includes two members from each owner community.

The mayor may serve or designate some other member of the governing board of their owner community to serve in their place on Platte River’s Board of Directors. Each of the other four directors is appointed to a four-year staggered term by the governing body of the owner community represented by that director.

Wendy Koenig
Mayor
Town of Estes Park

Reuben Bergsten
Board chair
Director of utilities
Town of Estes Park

Jeni Arndt
Mayor
City of Fort Collins

Kendall Minor
Utilities executive director
City of Fort Collins

Joan Peck
Mayor
City of Longmont

David Hornbacher
Assistant city manager
City of Longmont

Jacki Marsh
Mayor
City of Loveland

Kevin Gertig
Vice chair
Director of Loveland Water and Power
City of Loveland
SENIOR LEADERSHIP TEAM

Platte River operates under the direction of a general manager who serves at the pleasure of the board of directors. The general manager is the chief executive officer with full responsibility for planning, operations and the administrative affairs of Platte River. Platte River’s senior leadership team has substantial experience in the utility industry.

Jason Frisbie  
General manager/CEO

Eddie Gutiérrez  
Chief strategy officer

Sarah Leonard  
General counsel

Raj Singam Setti  
Chief transition and integration officer

Dave Smalley  
Chief financial officer and deputy general manager

Melie Vincent  
Chief operating officer

Angela Walsh  
Executive assistant to the GM/CEO, board secretary, administrative services supervisor
2024 GOALS

The 2024 Strategic Budget supports Platte River’s ongoing efforts to carry out the RDP while maintaining our foundational pillars to safely provide reliable, environmentally responsible and financially sustainable energy and services to the owner communities.

Reliability

100%
No loss of load to Platte River’s owner communities

Transmission

0
No unplanned communication outages to Platte River’s owner communities

Fiber communications

≥ 97%
Adjusted equivalent availability factor, no controllable outages

Rawhide Unit 1

≥ 90%
Delivery reliability

Rawhide combustion turbines
Environmental responsibility

Energy savings from completed projects

- System total
- Energy savings from completed projects

18,016 MWh
0.5% of Platte River’s load
The Efficiency Works energy savings goal to reduce Platte River’s load

Financial sustainability

2024 strategic financial plan (SFP) metrics

</table>
Platte River’s organizational structure consists of six divisions, each containing the departments needed to safely deliver reliable, environmentally responsible and financially sustainable energy and services to the owner communities. A brief description follows of each division and its departments, including 2024 objectives.
**General manager/CEO**

The general manager provides strategic leadership and direction for the safe, ethical and effective operation of Platte River. The general manager consults with, advises and makes recommendations to the board of directors about Platte River’s strategic direction and operations, based on Platte River’s foundational pillars of system reliability, environmental responsibility and financial sustainability. The general manager also provides oversight and direction for the board secretary and all centralized business and office management functions.

In addition to ongoing operational oversight in 2024, the general manager will continue leading efforts to diversify Platte River’s energy mix and achieve the board’s and owner communities’ electricity generation carbon reduction goals. Platte River will work with utility leaders from the owner communities to welcome DER and facilitate a distributed energy resources management system (DERMS) and further integrate the transmission and distribution systems. The general manager will lead essential collaborative efforts between Platte River and the owner communities.

**Business strategies**

In collaboration with the owner communities, this division manages relationships critical to Platte River’s success, including those with staff, elected officials, owner communities, stakeholders and the public.

**Communications, marketing and external affairs** develops and executes tactical and strategic plans to support Platte River’s mission and provide information about the utility to staff, board of directors, stakeholders and the public. The department specifically manages internal and external communications, public relations, marketing, community engagement and support, legislative policies and government affairs to support Platte River, Efficiency Works and other specialized programs like DER. During 2024, the department will deploy significant outreach and communications programs to support the new strategic initiatives that emphasize greater engagement and collaboration with owner communities to collectively pursue a noncarbon energy future. Other focus areas include facilitating community engagement around Platte River’s 2024 Integrated Resource Plan (IRP) and permitting of aeroderivative combustion turbines; commemorating Rawhide Energy Station’s 40th anniversary of operations; influencing public policy outcomes at the local, regional and statewide levels; and supporting regulatory processes for key projects. The department will also support growth in DER and DES programs.

**Human resources** proactively partners with internal operating departments to address strategic personnel opportunities in support of Platte River’s strategic initiatives. The department focuses on attracting, developing and retaining talent for the organization. Human resources manages and focuses on minimizing controllable health care costs and risks while maintaining attractive and competitive staff benefits. In 2024, the department will focus on continuous process improvement of the overall total rewards strategy and program and support efforts toward the transition plan for Rawhide staff. Human resources will also refine and implement additional functionality within the human resources information system.
while documenting processes and identifying more efficient ways to support the organization as it seeks to achieve the RDP.

**Safety** supports Platte River’s core value of workforce, public and asset safety by administering and managing policies that leverage workforce training, education and safety culture development. The department will facilitate planned training for all staff and specialized groups in 2024 and track safety certifications required for designated roles. The department will also conduct annual occupational health testing, evaluate and acquire personal protective equipment and systems and provide issue-specific safety training through traditional and multimedia channels and by using third-party subject matter experts.

The **emergency response team**, certified by the state of Colorado, protects staff and infrastructure at the Rawhide Energy Station and provides mutual aid assistance to the owner communities, the Nunn Fire Protection District and the Wellington Fire Protection District. In 2024, the team will conduct 10 training events and perform required annual system testing and inspection in accordance with National Fire Protection Association standards.

**General counsel**

The general counsel division oversees Platte River’s legal, environmental compliance and reliability compliance functions.

**Legal** provides a broad range of services to support all Platte River operations and strategic initiatives. Services include managing complex transactions, legal and regulatory compliance, support and advice to senior leadership and the board of directors, risk management and dispute resolution, contract management and review, and support for human resources and real estate matters. The legal department also supervises relationships with retained counsel who assist in specialized areas such as water law, public finance, pension and Federal Energy Regulatory Commission (FERC) regulations. In 2024, the legal department will emphasize efforts to expand noncarbon energy resources; advise on the legal implications of legislative and regulatory changes; continue to modernize contracting processes and documents; support Platte River as a participant in the Chimney Hollow Reservoir construction project; continue to improve information governance and privacy practices; and help train staff on legal and compliance obligations. Legal will continue to develop the framework for future participation in RTO West. The legal department will also work with outside counsel in legal proceedings to protect Platte River’s interests, as appropriate.

**Environmental compliance** oversees Platte River’s adherence to federal, state and local environmental regulatory requirements governing Platte River’s operations. The department’s primary activities include obtaining and managing compliance with various permits; reporting key operational data to local, federal and state regulatory agencies; monitoring emissions; managing environmental projects; assessing emerging regulatory changes; and collaborating with trade groups and other utilities on environmental topics. The department’s focus in 2024 will be to support activities that advance the RDP by finalizing permitting of aeroderivative combustion turbines and to implement programs that comply with new federal and state requirements related to groundwater protection, which include regular field sampling, groundwater modeling and evaluation of mitigation options. The department will
also manage necessary environmental permitting in compliance with new or revised regional ozone nonattainment and greenhouse gas regulations.

**Reliability compliance** provides oversight and guidance for all North American Electric Reliability Corporation (NERC) and Western Electricity Coordinating Council (WECC) reliability obligations enforceable under the Energy Policy Act of 2005. Activities include compliance risk analysis and monitoring as well as compliance implementation guidance and support. In addition to providing reasonable assurance to senior leadership that Platte River meets all NERC and WECC regulatory compliance obligations, the department will continue to develop and implement a risk assessment and internal controls framework in 2024. This framework enables Platte River to demonstrate effective risk mitigation practices to WECC staff ahead of Platte River’s next formal audit, as well as completing an outside compliance audit conducted by WECC.

**Transition and integration services**

The transition and integration services division drives Platte River’s evolution toward a noncarbon energy future and focuses on energy transition leadership.

**Portfolio strategy and integration**

**Portfolio strategy and integration** develops near- and long-term power supply plans that drive strategies to achieve the RDP. These plans are developed with industry standard modeling tools and analytical methods and form the basis of the IRP, budgeting and wholesale rate projections. The department also provides analytical support for power transactions, DER integration, short-term operational optimization and WEIS analysis. During 2024, the department will complete and file the 2024 IRP, support stakeholder engagement for aeroderivative combustion turbine and other dispatchable capacity justification, refine a new resource integration schedule, continue assessment of innovative power generation and storage technologies and lead procurement of future PPAs for additional noncarbon resources as well as pursue opportunities for revenue generation through sales agreements.

**Distributed energy resources**

**DER** leads the coordinated and collaborative effort between Platte River and the owner communities to integrate DER to make them part of a reliable, financially sustainable and increasingly noncarbon electric system. In 2024, the department will collaborate with the chosen DERMS vendor to begin implementation, which is central to the integration of DER into Platte River’s and the owner communities’ electric systems by providing visibility into DER availability, aggregation and potential control. The department will also lead the distributed utility storage project, co-lead the development and implementation of flexible DER programs with the DES team, and support the completion of the 2024 IRP.
Distributed energy solutions

DES leads the development and implementation of customer DES, which provide technical and financial support to help customers use energy more wisely and better manage their electric loads. The department collaborates with owner community staff to provide DES to their customers under the Efficiency Works brand in addition to supporting the customer wind power purchase programs and associated REC tracking for the communities. In 2024, the department will continue expanding beyond energy efficiency program offerings to encourage the deployment of additional DER technologies in support of the RDP. The department will continue offering efficiency programs to residents and businesses and also plans to impact annual energy use and consumption through new DES offerings focused on building electrification, electric vehicle (EV) charging, demand flexibility and battery storage initiatives. These new offerings are anticipated to grow in future years to align with Platte River and owner community goals.

Digital

The digital department, composed of eight functional groups, enables a secure and reliable technology ecosystem by leading Platte River’s digital transformation with innovative strategies and solutions.

Information and cyber governance develops cybersecurity strategy and manages the cyber risk remediation program. The group designs and implements the asset management program and provides information governance support to the organization, making data and information available, reliable, secure and transparent. The group researches technical security controls, manages security systems, provides cybersecurity education for the organization and oversees the vulnerability management program.

Client technology and security manages end-user computing devices and applications, including laptops and desktops, special-purpose computers, non-enterprise software, audio and video systems, building support systems, printers, mobile devices and more. The group is responsible for client-facing system administration and mobile device management via on-premise and cloud tools. The team collaborates with others to supply project resources, provides access services for market resources (local security administration), coordinates digital communications and remediates security vulnerabilities on client devices.

Enterprise applications manages the lifecycle of all enterprise applications, including data center and cloud-based applications used across the enterprise or by a large part of the user community. Examples include the financial, maintenance management and human resources information systems. Activities include supporting other departments with applications-related business need analysis, requirements gathering, product research, vendor evaluations, project planning, contractor management and ongoing maintenance.

Enterprise infrastructure manages the backend systems used by other departments to deliver services to end users. The group designs, implements and manages the wired and wireless enterprise networks, firewalls, servers, virtualization systems, storage systems and backup and recovery solutions.
Operational technology and critical infrastructure protection (CIP) compliance maintains the reliability, security and compliance of the regulated control systems that monitor 263 miles of wholly owned and operated high-voltage transmission lines and 27 electrical substations on Platte River’s system. The group provides transmission system asset control, situational awareness, advanced applications and operations data exchange with critical partners while overseeing compliance with NERC regulations.

Fiber optics manages the network that provides high-speed, digital connectivity between Platte River’s generating assets, its transmission system and the owner communities’ distribution systems. Primary activities include maintenance, management and documentation of the physical fiber optic infrastructure and installation of new and relocation of existing fiber optic cable.

Telecommunications maintains the safe, reliable and secure operations of Platte River’s wide-area communications network, a critical component to the transmission system’s operation and communication with interconnected utilities.

Digital project management maintains the digital project portfolio and works with various digital leaders as well as other departments to perform project intake and assist in creating project documents. This new functional group represents an important step in the evolution of project portfolio management at Platte River as the organization works toward best practices in planning, prioritization and execution of projects.

During 2024, the digital department will initiate and manage multiple projects central to Platte River’s operations and long-term objectives. A partial scope of projects includes:

- Replacement of the supervisory control and data acquisition (SCADA) system with an energy management system (EMS)
- Ongoing support and implementation of a compliance management platform, needed to comply with NERC regulatory standards
- Initiation of phase two of the rebuild project for the long-haul east fiber optic line, a 20-year-old overhead cable, that will add capacity between Boyd Substation and Longs Peak Substation
- Implementation and configuration of the enterprise resource planning (ERP) system
- Data archiving to identify, clean and migrate data for business units as they prepare for the ERP system implementation
- Selection and initial implementation of a DERMS
- Support of the implementation and integration of systems required for eventual operation in RTO West
- Data science and analytics projects to support the RDP

Financial services

As a service-providing division, financial services protects the short- and long-term financial sustainability of Platte River, manages the financial risk of the organization and supports organizational leadership through the following functions.
Treasury manages Platte River’s cash, investments and debt to verify the organization has sufficient financial resources to fund projects and initiatives while meeting the organization’s financial targets. Treasury includes Platte River’s accounts payable, purchasing, warehousing, inventory control and contract administration functions.

Financial reporting and budgeting monitors and reports on Platte River’s financial status. This includes budget development as well as monthly and annual financial reporting, giving managers, directors, senior leaders and the board of directors the tools and information they need to make informed decisions. This team also coordinates Platte River’s annual financial audit and leads the budget process in compliance with Colorado state budget law.

Accounting manages the transactional side of accounting including capital, fuel, metering, market settlements and invoicing for the organization. This team also provides reporting to managers, directors and senior leaders to make informed decisions in these areas. This team also assists with coordinating the annual financial audit and budget preparation.

Financial planning and rates develops financial and rates models and establishes metrics for financial sustainability. This team is responsible for long-term financial planning using established models and works closely with the resource planning department. In collaboration with senior leadership and the board of directors, this team establishes rate strategy and design, maintains the rate setting policy and establishes rate tariffs.

Enterprise risk management coordinates risk management activities at Platte River. These activities include overseeing the risk assessment and mitigation process, working with risk owners in the organization and reporting to the risk oversight committee. The manager works with internal audit, other departments and the risk oversight committee to develop, support and maintain the enterprise and energy risk management programs.

Internal audit provides independent, objective assurance and consulting services. This includes assessing risks to organizational objectives, confirming asset protection and analyzing processes for compliance with regulations, policies and procedures. Internal audit helps management understand risks and provides recommendations to help enhance the efficiency and effectiveness of risk management, internal control and governance processes.

During 2024, the financial services division will participate in the implementation of the ERP system and support preparations for RTO West entry. The financial planning and rates team will also analyze varying cost allocations, rate designs and strategies for DER initiatives and support completion of the 2024 IRP. The risk team will provide training and educational risk sessions to the organization and continue to expand the enterprise risk management program by working through the results of the risk assessment performed in 2023.

Generation and transmission

The generation and transmission division manages the core functions of Platte River – the generation of power and the delivery of high-voltage electricity to substations in the owner communities. This division is composed of several departments and groups that collaborate to fulfill Platte River’s core operations and strategic direction.
**Fuels and water**

Fuels and water manages the availability and delivery of critical resources necessary to operate generation facilities reliably and efficiently. Primary activities include managing contracts, developing strategies to optimize coal and rail agreements, maintaining a reliable water supply and accurately planning for future fuels and water needs. In 2024, the fuels and water group will continue to support the Chimney Hollow Reservoir construction project while optimizing Platte River’s water resources portfolio, engage in regional water discussions and continue strategic planning efforts at the Trapper Mine to optimize coal inventory levels at the Craig Generating Station. An additional focus will be strategic management of coal deliveries for Rawhide Unit 1 to align with projected burn rates.

**Power generation**

The power generation departments perform every job associated with the generation of electricity at the Rawhide Energy Station. These departments manage plant operation and maintenance, fuel handling, control systems, design and engineering, and building and property maintenance.

**Power generation administration** oversees power generation, plant operations, maintenance, engineering, fuel handling and facilities maintenance at the Rawhide Energy Station. The group also participates on the engineering and operations committee of the Craig Generating Station. 2024 efforts will include further adapting the Rawhide Energy Station to changing market conditions driven primarily by increased use of intermittent resources and participation in WEIS. The team will continue work on a transition plan for Rawhide staff and a decommissioning plan for Rawhide Unit 1.

**Plant engineering services** supports operations and maintenance activities for all Rawhide Energy Station infrastructure related to power generation. Primary functions include troubleshooting process issues, inspection and assessment of major plant equipment during outages, maintenance assistance and identification and implementation of capital projects. During 2024, the department will continue to make reliability and availability improvements to the combustion turbines and enhance flexibility of Rawhide Unit 1 to more effectively meet evolving market demands and accommodate increased noncarbon resources.

**Mechanical maintenance** conducts safe and effective maintenance of all mechanical equipment and systems at the Rawhide Energy Station. The group plans and executes all outages and collaborates with engineering for the planning and execution of capital projects. Efforts in 2024 include scheduled inspections of combustion turbine units F and C. The group will also conduct ongoing Rawhide Unit 1 mechanical maintenance.

**Instrumentation and electrical** conducts safe and effective maintenance of all low- and medium-voltage electrical equipment, instrumentation and control systems at the Rawhide Energy Station. The group performs troubleshooting and repair services for Rawhide Unit 1 and all combustion turbines. During 2024, the group will perform preventive maintenance and prioritize corrective action to maintain generation reliability.
**Fuel handling** manages the coal supply to Rawhide Unit 1. The department is responsible for operating the rotary car dumping system, suppressing dust in all plant areas, maintaining the Rawhide short-line railroad system and managing fly and bottom ash from Rawhide Unit 1. Significant objectives for 2024 include maintaining an adequate coal supply, efficiently transferring ash from the plant to the monofill in compliance with regulatory requirements and sustaining effective dust suppression throughout the facility.

**Plant operations** manages and maintains all systems and components of Rawhide Unit 1 and the combustion turbines to maintain reliable generation that meets load demand and other obligations. In addition, the department supports operations of the water pump stations that serve the Rawhide Energy Station. The group will work in 2024 to support Rawhide Unit 1's high reliability with greater operational flexibility, including enhanced ramp rate and turndown.

**Rawhide facilities** maintains all buildings and structures, roofing, roads, heating, ventilation and air conditioning (HVAC) systems, lighting, plumbing, elevators, doors, windows and floors for all 48 buildings at the Rawhide Energy Station. The group also manages the bison herds and maintains the grounds including landscaping, rangeland management, weed and pest control and fencing. During 2024, the group will conduct standard maintenance activities.

**Power markets**

**Power markets and generation dispatch** schedules and dispatches generating resources to reliably meet energy requirements of the owner communities and other obligations. The department optimizes available resources using bilateral and an organized energy market to create the most cost-effective and reliable supply of energy to meet customer demand. In 2024, staff will begin preparations to join RTO West in support of Platte River’s strategic initiatives and the RDP. The department will also manage available resources, including hydropower energy allocations from the Western Area Power Administration (WAPA), while considering ongoing drought conditions, and monitoring the development of new noncarbon resources under PPAs.

**Power delivery**

Power delivery manages the complex, long-term planning and real-time demands of Platte River’s high-voltage transmission system to deliver energy to the owner communities. Staff leverages various tools to continually monitor thousands of system components yielding maximum performance and energy channeling efficiency. Large amounts of data and long-range plans are used to design and build transmission systems to meet future customer demand and optimize participation in WEIS and RTO West. Power delivery will be a critical component in future work to better integrate Platte River’s transmission system with the distribution systems of the owner communities.

**System engineering** conducts long-range system planning, designs safe, reliable and financially sustainable transmission lines and substations along with system relaying protection and supports compliance-related activities. The department also provides engineering services under intergovernmental agreements with the owner communities,
when requested. In 2024, the team will provide engineering and project management support to complete construction and commissioning of the new Severance Substation, located in Weld County, that will interconnect the Black Hollow Sun Project to the existing transmission system. The team will also provide engineering support and project management for replacement of an autotransformer located at the Timberline Substation and a breaker replacement and relay upgrade project at the Airport Substation.

**System operations** safely and reliably operates Platte River’s transmission system service to the owner communities and administers the transmission tariff. The department conducts coordinated transmission operations with neighboring reliability operators while complying with all required NERC and WECC reliability standards and in accordance with Platte River’s processes and procedures. During 2024, the group will continue to implement new energy management system technologies to maintain safe and reliable transmission service when operating within the western interconnection, WEIS and as DER are incorporated.

**System maintenance and facilities**

**System maintenance** is responsible for building and maintaining electrical substation assets including those wholly owned by Platte River and some assets owned by the distribution utilities of the owner communities. The department also inspects and maintains Platte River’s 230 kilovolt (kV) and 115 kV transmission lines. Collaborating with internal and external groups, the department manages equipment installations and inspections for capital projects, provides ongoing maintenance and conducts testing of substation equipment. During 2024, the group will perform transformer maintenance, battery maintenance and testing and substation breaker maintenance at Platte River substations. The team will perform ongoing systemwide vegetation management and will oversee contracted maintenance on the transmission system. The department will also work with the system engineering department to complete upgrades and improvements to substations, Severance Substation construction and transmission line configuration changes for highway construction.

**Headquarters facilities** is responsible for all building and grounds maintenance and repairs at the headquarters campus and substations. The group oversees maintenance activities so that spaces, structures and infrastructure are in optimal operating condition. They oversee and perform routine, scheduled, and anticipated maintenance on building equipment and systems that support the bulk electric system. Facilities also oversees grounds maintenance at 27 sites around the four owner communities. During 2024, the team will complete substation HVAC unit replacements at the Portner and Mary’s Lake substations, install a system that takes stormwater drainage from the west side of the maintenance building and ties it into the underground storm water system, and evaluate adding more solar to the Energy Engagement Center roof structure to provide enough generation to incorporate a commercial-size battery system. The group will also continue optimizing the building automation system to maximize efficiencies and energy savings.

**Physical security** designs, implements and maintains the physical access control systems, administers intrusion detection systems at substations, manages video surveillance systems, oversees security guard services, reviews security policies and procedures for all Platte River locations and oversees multiple critical infrastructure protection standards relating to
physical security controls. In addition to ongoing operations in 2024, the group will install perimeter detection systems on the LaPorte and Severance substations and provide compliance evidence for the 2024 WECC audit of CIP physical security standards.

**Fleet** is responsible for purchasing and maintaining all Platte River vehicles. The group also maintains records and performs inspections as required by the Department of Transportation program.
2024 STRATEGIC BUDGET SUMMARY

The Platte River Power Authority 2024 Strategic Budget, produced under the direction of the organization's leadership, aligns with the long-range strategic plan to provide community leaders, stakeholders and the public with a transparent roadmap of Platte River’s tactical, operational and capital plans for the coming year.

The foundation for Platte River’s 2024 budget represents ongoing investments to transform the organization based on its strategic initiatives and core operations. These reflect Platte River’s foundational pillars of system reliability, environmental responsibility and financial sustainability. The pillars guide the decision making process that directs the resource allocations, revenues and expenses detailed in the budget.

Expenses are managed from a broad perspective with the goal of operating the system in a safe, compliant and reliable manner while expanding environmental stewardship. Platte River communicates and collaborates with the owner communities to align processes and outcomes for the benefit of all customers.

Platte River’s budget includes $313 million in revenues and $300.6 million in expenditures, consisting of operating, capital and debt. Of the $281.9 million in operating expenses and capital additions, approximately 85% and 15% are allocated to activities supporting core operations and strategic initiatives, respectively.

Strategic initiatives
$42.1 million, 15% of operating and capital

- Resource diversification planning and integration, $28 million, 10%
- Community partner and engagement, $2.2 million, 1%
- Workforce culture, $2.1 million, 1%
- Process management and coordination, $9.8 million, 3%

Activities
- Aeroderivative combustion turbine design and air permitting
- Noncarbon resources infrastructure and planning
- DER, including DERMS, beneficial electrification and program development
- 2024 IRP development, RTO West planning and operational flexibility
- Public engagement for the RDP, IRP, DER and DES programs
- Workforce evolution and development
- ERP, enterprise risk management and project management

Core operations
$239.8 million, 85% of operating and capital

- Generation, including fuel, $130 million, 46%
- Energy purchases including wind, hydropower and solar energy, $63.8 million, 23%
- Transmission, $36 million, 12%
- Energy efficiency programs, $10 million, 4%

Activities
- Rawhide Energy Station and Craig Generating Station preventive, proactive maintenance and capital improvements for reliability, safety, efficiency and environmental compliance
- Proactive capital investments including combustion turbine projects, Trapper Mine reclamation, transmission line rebuild, transformer replacements, fiber optic replacement and expansion
- Continued generation from wind and solar resources under PPAs
- Ongoing operations and maintenance of the transmission system
- Energy efficiency programs
- Staffing additions to support organization changes and strategic initiatives

Operating expenses and capital additions
$281.9 million
- Core operations 85%
- Strategic initiatives 15%
Strategic Initiatives

$42.1 million, 15% of operating and capital

Platte River remains committed to working toward the RDP adopted in 2018, which calls for a 100% noncarbon energy mix by 2030, while maintaining the organization’s foundational pillars of reliability, environmental responsibility and financial sustainability. According to the policy, achieving a 100% noncarbon energy mix requires key advancements in energy storage technology, transmission infrastructure, distributed generation resource performance and active participation in an organized energy market. Additional information is available at prpa.org/2030-goal.

As Platte River celebrated half a century of public power in 2023, management and staff collaborated with the board of directors to develop a new strategic plan to reflect numerous industry changes since the 2018 Strategic Plan. Tied to Platte River’s vision, mission and values, the 2023 Strategic Plan provides direction and guidance for the future and aligns activities throughout the organization with the following four strategic initiatives:

- Resource diversification planning and integration
- Community partner and engagement
- Workforce culture
- Process management and coordination

The following information highlights investments in 2024 that support each strategic initiative.

Resource diversification planning and integration

$28 million, 10%

Platte River’s resource diversification planning and integration effort is an evolution of the 2018 resource diversification and alignment strategic initiative. With a focus on implementing a diverse resource portfolio that reliably and affordably serves Platte River’s owner communities as coal-fired resources retire, this strategic initiative reflects the accelerated timeline of asset integration required to maintain the organization’s foundational pillars during the region’s energy transition and aligns with recommendations from ongoing resource planning efforts. This initiative also includes implementation of technological resources and data analytics to modernize the electric grid, optimization of assets for participation in an organized market and capturing opportunities as the industry continues to evolve.

Aeroderivative combustion turbines

The RDP directs Platte River to proactively work toward a 100% noncarbon portfolio by 2030, provided the organization can maintain its foundational pillars and subject to necessary key advancements. The 2020 IRP identified the need for significant wind and solar resources to achieve this goal. The IRP also called for a dispatchable resource to maintain system reliability.
while other technologies, such as long-duration storage, develop and reach maturity. The need for this type of resource was confirmed and further refined in subsequent resource planning activities in 2022 and is planned to be included in the 2024 IRP.

In 2023, Platte River established a cross-functional team to evaluate dispatchable resource technology options and make recommendations to senior leadership. Supported by independent expert analysis, the recommended technology is flexible, high-efficiency, low-carbon aeroderivative combustion turbines. Aeroderivative combustion turbines will use natural gas as their primary fuel source initially but have the potential to use green hydrogen and other alternative fuels as the necessary technology and infrastructure develop. They also effectively support variable renewable resource integration because they can start up and ramp from zero to full output, and back down again, within minutes. They can provide critical reliability support to the grid, in some cases without consuming fuel, and help Platte River hedge ancillary services costs for decades to come. The team also made substantial progress on air permit modeling and preliminary design activities.

In 2024, Platte River will invest approximately $4.6 million of capital and $0.3 million of operating funds in this multiyear project. Activities in 2024 will include further project definition including capacity, detailed engineering design and submitting an air permit application. This resource should begin commercial operation in early 2028.

To support this dispatchable resource and other possible future resources, in 2024 Platte River will begin preliminary engineering and design of a $13.5 million multiyear project to expand the existing Rawhide Substation by 2027. In addition to foundations, equipment installation and modifications to existing structures, the project will include grading land at the site and additional perimeter fencing.

**Noncarbon resources**

Noncarbon resources are expected to represent 35.9% of Platte River’s 2024 total energy production, which includes REC allocations to carbon resources. Staff is advancing the RDP by working to secure additional solar, wind and storage resources before Rawhide Unit 1 retires. The goal is to spread out necessary investments and resulting rate impact while gaining needed operational experience and helping the owner communities achieve interim carbon reduction goals.

In late 2022, Platte River finalized an amended PPA to purchase solar energy from the 150 MW Black Hollow Sun Project. The project is expected to produce test energy in late 2024 and begin commercial operation in early 2025. Platte River will invest the final $6.6 million of a total $13.1 million project cost to complete construction and commissioning of the new Severance Substation in Weld County that will interconnect the Black Hollow Sun Project to Platte River’s transmission system. Staff will also work to develop systems to view and, when needed to maintain reliability, limit solar output. As a separate project pending the execution of the new purchase power agreement discussed below, Platte River will invest $1.5 million of a total $4.3 million multiyear project to install breakers, conduit, switches and other substation systems, as well as one mile of double-circuit transmission line, to create an additional interconnection bay at Severance Substation. Once complete in 2025, this
infrastructure will serve as a delivery point for a new solar resource and the transmission line will increase capacity and reliability of the substation to support future expansion.

In 2024, staff will continue steps to integrate more renewable energy. The PPA for 100-150 MW of additional solar, which the interconnection discussed above will be used for, will be signed so that permitting and development can begin. Staff will also work to procure up to 200 MW of additional wind. Platte River’s resource plans also call for a significant increase in storage to support decarbonization by aligning variable renewable energy generation with load. Having diverse storage types, durations and locations is important to improve their potential benefits. Until long-duration storage technology matures, Platte River will add short-term storage. For the next storage initiative, the DER department will coordinate with the owner communities on as many as five 5 MW, four-hour distribution-level storage projects placed across the region for a combined capacity of 100 MWh. Implementation will start in 2024 with a target commercial operation date of 2026. To support these storage resources, design for interconnection infrastructure in each owner community will begin in 2024 with construction occurring between 2025 and 2026 at a multiyear total investment of $3.8 million for all project locations. Staff also plans to issue an RFP for a utility-scale 25 MW four-hour battery system in late 2023.

As Platte River continues to decarbonize its resource portfolio, it will need new substation facilities and modifications to existing substations to connect new renewable resource sites to the transmission system and improve transmission system reliability. It will also need to build new transmission lines to maintain reliability and relieve transmission congestion. Platte River will oversee these projects and, beginning in 2024 with a combined $0.1 million investment, contract with external consulting services to support land rights, land acquisition efforts and permitting requirements. Specific project details will depend on new renewable resource types and locations. These multiyear substation projects are estimated to cost a total of $10.1 million, with targeted completion in the fall of 2027, and multiyear transmission projects, estimated at $50.3 million total, should conclude in summer 2028.

**Distributed energy resources and solutions**

DER are technologies deployed on the electric distribution system or on customer premises that can be used to provide individual customer benefits and value to all customers through electric system optimization. When deployed, DER enable individual customers to actively participate in and benefit from a reliable, financially sustainable increasingly noncarbon electric system. DER technologies include energy efficiency, EVs, energy storage, beneficial electrification and rooftop solar.

Investing $3.3 million of operating funds in 2024, Platte River will work collaboratively with the owner communities to advance the following initiatives and impact an estimated 696 MWh:

- Technical and financial support for residential customers seeking to reduce the carbon impact of home space and water heating by converting from fossil fuel to efficient heat pump technology
• Information to support customers interested in transitioning to EVs through the EV educational website and new consulting services to support commercial customers evaluating fleet conversion to EVs
• Development of demand flexibility solution pilots for EVs and storage that can integrate with the DERMS described below
• Equitable program solutions to the owner communities and their customers
• Engagement and collaboration with other utilities and organizations that are developing and demonstrating effective approaches to integrate DER into customer DES program offerings
• Identification and evaluation of other new technologies that can provide additional benefits to customers and the electric system

Additionally, Platte River and the owner communities are working together on new programs that support development of a VPP. A VPP is a portfolio of flexible DER capable of being operated, on a scheduled basis or in near–real time, to manage the electric supply-demand balance. A VPP could allow customers to save money by shifting energy consumption from times when prices are high to times when prices are low and to be compensated by providing reliability services to the system.

Enabling a VPP requires significant upgrades to Platte River’s and the owner communities’ information technology and operations technology systems. A VPP needs additional systems for reliable, near–real–time communication with customers’ DER. In addition, Platte River will need to aggregate DER in a system that allows individual DER to operate predictably and reliably in coordination with Platte River’s participation in a regional market. VPP operation also must be coordinated with the owner communities as they manage DER for distribution system benefits.

Many different information and operation technology systems are involved in this coordination, such as customer information systems, advanced metering infrastructure and advanced distribution management systems. However, the DERMS is the core. Platte River expects to select a DERMS vendor in 2023 that can meet these requirements. This DERMS could be extended to owner communities for their use or integrated with a DERMS of their choice. After selection, Platte River will invest approximately $2.5 million in 2024 to procure and begin implementing this $9.9 million total multiyear project with an expected completion date by 2027.

Integrated resource plan

2023 included robust community engagement efforts and resource planning, including studies of current energy resources and those that may be added to meet anticipated energy demand while achieving the RDP. Traditionally due every five years, Platte River will complete the 2024 IRP one year ahead of schedule so that at least two IRPs are completed before Rawhide Unit 1 retires. These plans must reflect the most up–to–date assumptions and consider latest technologies. During 2024, Platte River will invest $0.1 million in addition to extensive staff time to continue community engagement and finalize work on the 2024 IRP for board approval in the spring. The financial governance section has additional information about the IRP.
Organized energy markets

Platte River entered WEIS in April 2023, providing broader access to generation resources, enabling opportunities to improve operational efficiencies and seek out cost savings for the owner communities. In 2024, staff will continue managing day-to-day operations in WEIS to serve the owner communities’ loads, economically and reliably dispatch available resources, and manage renewable generation resources.

As staff continues to navigate operating in WEIS, preparations to join RTO West will continue. A cross-functional team within Platte River and industry expert consultants will identify and develop requirements, training, business processes and systems needed for successful participation in this full, day-head market. Platte River will need new marketing software functionality to develop bids and offers and manage settlements in RTO West. In parallel, Platte River’s finance, legal and transmission teams will collaborate to address transmission cost recovery in RTO West. The 2024 budget includes approximately $1.2 million towards these early efforts.

To optimize participation in organized energy markets, Rawhide staff will continue to test and operate Rawhide Energy Station resources under lower load conditions and identify opportunities for investments to improve performance, including operational flexibility and availability, and reduce maintenance expenses including outage costs.

Operational flexibility

Platte River’s combustion turbines are increasingly important to the flexible integration of noncarbon resources, participation in WEIS and meeting peak energy demand. To increase energy output during summer months, the 2024 budget includes $1.5 million for the addition of evaporative cooling and wet compression technology for combustion turbine Unit F. This technology increases water vapor content of inlet air. The goals are to increase summer generating capacity, lower the heat rate, decrease fuel costs and reduce nitrogen oxide emissions.

Coal inventory optimization

Platte River will actively and strategically manage coal inventory at the Craig Generating Station, maintaining a gradual glidepath to zero inventory for Craig Unit 2 when it retires in 2028. Trapper Mine owners may buy and sell on-site coal among themselves to achieve inventory objectives while also supporting flexible operation at the station. Staff will also manage Rawhide coal inventory according to operational needs and contract compliance, adjusting as needed, with the goal of reaching zero inventory when Rawhide Unit 1 retires.
**Chimney Hollow Reservoir**

Platte River will continue to collaborate with its partners through the construction of Chimney Hollow Reservoir, the most significant component of the Windy Gap Firming Project. The project supports the long-term, dependable delivery of Platte River’s Windy Gap water, which is essential for reliable operations and optimizes Platte River’s water resource portfolio. In 2024, Platte River will provide its share of the estimated project completion costs and expenses, including the increase described in the debt service expenditures and other long-term obligations section of this document. Contractors expect construction to progress through 2025. Once the reservoir is completed, the time needed to fill it will depend on water supply.

**Community partner and engagement**

$2.2 million, 1%

The 2023 Strategic Plan initiatives emphasize greater engagement and collaboration with owner communities to collectively pursue a noncarbon energy future and build a regional identity. Platte River will work to build a strong partnership with the owner communities and enhance regional visibility through continued engagement efforts, transparent education and communication, and ongoing community support and involvement activities.

**Communications, marketing and external affairs**

Staff will build on the momentum of the long-term public education program initiated in 2023 to establish a regional identity and continue to explain how Platte River will collaborate with the owner communities to achieve the shared noncarbon goals. Part of the collaboration includes expanding marketing efforts to support the 2024 IRP and progress toward achieving the RDP, including deployment of a multimedia brand marketing and communications campaign to engage communities. The team will also manage communications and marketing for all DES and DER programs, including the development of a new DES website and ongoing promotion and operation of the EV education microsite.

Community support and involvement activities will continue in 2024 to enhance the wellbeing of the citizens in the owner communities and increase awareness about Platte River. Platte River will also continue expanding its stakeholder engagement with public policy, business, educational, environmental and nonprofit organizations during 2024 by strengthening relationships in support of Platte River’s objectives. Focus in 2024 will be on planning and permitting work for additional noncarbon and aeroderivative combustion turbine resources, enabling Platte River to increase renewable energy delivered to the owner communities. The external affairs team and contract lobbyist will continue monitoring state and federal policies that could affect Platte River’s operations.
Workforce culture

$2.1 million, 1%

Platte River will build on its high-performing workforce by providing ongoing development opportunities, dynamic talent assessment, job retention and succession planning for employees at the headquarters campus and Rawhide Energy Station. As the organization continues to work toward its energy transition, Platte River will maintain and enhance its strong workforce culture by recruiting the best available talent, fostering diversity and a culture of learning, personal growth and mutual respect.

Workforce evolution and development

Human resources will continue updating Platte River’s total rewards strategy, including work flexibility and overall employee wellness, to position the organization well for retaining and attracting high-quality employees. The department will also implement additional changes recommended by the compensation study conducted in 2022 and work done in 2023 to enable benchmarking, comparisons and other analysis with the broader market beyond public power.

Platte River will focus on the long-term transition at the Rawhide Energy Station as Rawhide Unit 1 approaches retirement by the end of 2029. In 2024, human resources and plant leadership will continue work on the transition plan for Rawhide employees to determine future staffing needs and the skills and experience needed to manage the organization’s future, more diverse energy mix. Platte River anticipates no involuntary workforce reductions and leadership will begin to design programs to re- or up-skill staff to take advantage of new job opportunities.

Internal engagement

Throughout 2024, Platte River will celebrate the 40th anniversary of Rawhide Energy Station by emphasizing Rawhide Unit 1’s legacy as a highly efficient, state-of-the-art resource while highlighting the unit’s role in achieving the energy transition. Activities include special events and memorabilia for past and present staff, local and regional communications efforts including video, and media engagement. Community support and involvement activities planned for 2024 also support the enrichment of Platte River’s workforce culture.

Process management and coordination

$9.8 million, 3%

The RDP challenges Platte River to change how it generates and delivers electricity to its owner communities. To meet this challenge, staff must also change how processes and projects are organized and managed. This requires a new or refined approach to systems thinking and change management, project management, technology integration and long-term planning, and comprehensive risk management.
Enterprise resource planning system

Many of Platte River’s critical business systems have reached the end of their useful lives, and some are well beyond design functionality. Others depend heavily on manual processes because they do not integrate with other systems. Manual processes between the outdated systems increase data integrity risks and decreases productivity. To upgrade and integrate digital systems, Platte River initiated a multiyear ERP project. In 2022, staff evaluated, selected and contracted to implement Oracle Cloud. In 2024, Platte River will invest approximately $5.6 million to finalize the project, concluding this $10.6 million estimated total investment. Contingency amounts are included in the total project cost as, periodically, scope and timeline are evaluated during project progression. Some uncertainty exists as requirements are clarified and best practices, sometimes requiring complete overhaul of existing processes, are considered. When complete, the ERP will fully integrate finance and accounting, cash management, procurement and contracts management, budgeting and forecasting, inventory management, asset and maintenance management and fleet tracking. It will improve productivity, reporting accuracy and functionality and align work products with organizational goals.

Enterprise risk management

A comprehensive risk management strategy will continue to develop and evolve as the enterprise risk manager works with internal audit, other departments and the risk oversight committee to develop, support and maintain the enterprise and energy risk management programs.

In 2024, the enterprise risk management program will continue to build on work performed in 2023 by analyzing and implementing recommendations from the third-party risk assessment. Staff also plans to continue to build a risk-aware culture by providing training and educational risk sessions to the organization.

Project management

As part of evolving process management and coordination, Platte River teams need new structures and processes to work more collaboratively across the organization. The creation of the digital project management functional group within the digital department is an example of a needed structure change. During 2024, Platte River leadership will continue to evaluate processes and structures with the objective to clearly define roles and responsibilities that allows cross-functional teams, across owner communities and within Platte River, to better identify, prioritize, plan and execute projects.
CORE OPERATIONS

$239.8 million, 85% of operating and capital

Platte River must continue to invest in core operations to maintain the safe, reliable production and transmission of environmentally responsible and financially sustainable energy and services to the owner communities. To diversify its resource portfolio, Platte River has PPAs for wind, hydropower and solar. With a focus on preventive and predictive maintenance strategies, core operations and maintenance expenses are relatively consistent from year to year.

Generation

For 2024, approximately 47% of Platte River’s energy will come from owned baseload coal-fired and natural gas resources. Through market participation in WEIS, Platte River will gain greater opportunities to purchase power if prices are lower than the cost to generate and to sell excess energy if production costs are below market prices. Purchasing power lowers fuel expense, which is partially offset by higher purchased power expense; selling power increases revenue, which is partially offset by higher fuel expense. Additional information about Platte River’s generation and sources of electricity is available on Platte River’s website at prpa.org/generation. Resource and load information, including resource mix, for the trailing 24-hour period is available at prpa.org/energy-production.

Rawhide Energy Station

Although Platte River continues to diversify its energy mix and plan for retirement of Rawhide Unit 1, this unit remains its single largest energy source. The Rawhide Energy Station began with the commercial operation of Rawhide Unit 1 in 1984 and has evolved into a diversified site with multiple forms of energy resources including natural gas, solar, battery storage and wind. As the portfolio changes, the ongoing performance of Rawhide Unit 1 and the combustion turbine units is critical to system reliability and instrumental to facilitating deeper levels of decarbonization of the resource portfolio. As a primary reliability resource, the combustion turbine units will receive more emphasis on upgrades and maintenance. In 2024, Rawhide Unit 1 and the combustion turbines will generate 34.6% and 3.1%, respectively, of Platte River’s energy before REC allocations.

Rawhide Unit 1

While a major maintenance outage for Rawhide Unit 1 was initially planned for 2024, Platte River will delay this outage until 2025 to avoid an additional major maintenance outage in 2027, replacing it with one minor outage before the unit retires at the end of 2029. This provides overall cost savings. The delay also allows for the integration of the ERP system to facilitate more efficient work order and vendor management.

The Rawhide Unit 1 control system enables plant operators to monitor unit performance and other equipment on the system. Platte River will invest approximately $1.1 million in 2024 to begin replacing aging hardware and network switches, update the Ovation controls network,
and replace controller cards and processors. At a total multiyear cost of $1.9 million, the update will be completed in 2025.

The Bently system is used to perform vibration monitoring on rotating equipment used throughout the plant, enabling operators to identify and troubleshoot potential issues with equipment before failure. The current system includes a software used for logging, monitoring and providing diagnostics that is reaching the end of its useful life. As part of a $0.4 million multiyear effort, Platte River will invest $0.3 million in 2024 to upgrade to Bentley’s latest software and virtualize the environment by bringing the servers and operator machines to the latest Microsoft Windows software and support system. The project will also expand the vibration monitoring system to other equipment at the plant.

**Combustion turbine units**

Platte River will invest $1.9 million to upgrade rotating and stationary compressor blades on combustion turbine Unit F to proactively address a known vulnerability with the existing blades. In addition to improving reliability, the upgraded blades may improve unit output from better air flow through the new compressor package.

To further increase reliability and reduce maintenance activities for combustion turbine Unit C, Platte River will invest $0.5 million to replace all existing electro-hydraulic stop and speed ratio valves and gas control valves with electric actuated valves. In addition to giving operators advanced diagnostic capabilities, the new valves will improve the cold weather reliability of the unit, reduce operations and maintenance costs and minimize safety and environmental hazards.

**Craig Generating Station**

Continued operation of Craig Generating Station’s units 1 and 2 requires investments to maintain optimal performance and environmental compliance until the units retire in 2025 and 2028, respectively. Platte River’s share of planned capital investments in 2024 is $0.1 million. Upgrades will be completed by plant operator Tri-State Generation and Transmission Association, Inc. (Tri-State) and primarily benefit the transmission system. No scheduled outages are planned. The Craig units will provide 9.8% of Platte River’s energy, with a portion resold through June 2024 under a 25 MW long-term contract.

As the retirement dates for the Craig units approach, Trapper Mine reclamation activities will intensify. Beginning in 2023, Platte River annually appropriates funding for mine reclamation under a recent accounting pronouncement. Previously, Platte River appropriated reclamation liability expenses as operations and maintenance funds, but they are now considered capital as an asset retirement obligation. The mine’s post-closure care period is expected to run through 2041, with currently estimated total funding of $11.6 million. Actual funding need is uncertain. Platte River will evaluate these plans as additional information is obtained before closure, including the impact of highwall mining.
Purchased power

The remainder of Platte River’s resource portfolio, approximately 53%, is sourced from wind, hydropower, solar (combined with battery storage) and other purchases.

Due to ongoing drought conditions that have depleted water supplies in the Colorado River basin, WAPA increased rates and reduced deliveries of Colorado River Storage Project (CRSP) hydropower in late 2021. Further CRSP delivery reductions are expected in 2024 but depend on water conditions. Deliveries from the Loveland Area Projects (LAP) have not been reduced and rates have been stable. The operating expenses section has more information on purchases.

Transmission, substations and fiber optics

Transmission and substations capital projects are determined through an annual 10-year load study that identifies areas Platte River must address to meet operational standards. Scheduling future delivery points and other system betterments requires collaboration and coordination with owner communities.

Transmission

During 2019, transmission line inspectors found significant corrosion on the base plates, anchor bolts and pole base sections along a 2-mile section of the 115 kV transmission line along Drake Road in Fort Collins. Corrosion stemmed from numerous road improvement projects that elevated the thoroughfare and buried the pole bases. Platte River will spend approximately $0.1 million during 2024 on engineering and initial construction of this multiyear presumed overhead line replacement project. With an estimated total project cost of $8 million, planned construction begins in 2026 and may be complete by 2027.

Substations

Due to the City of Loveland’s lengthy planned outage to replace distribution switchgear, Platte River will consolidate and perform several replacements and upgrades to the Airport Substation in 2024, with multiyear costs totaling $2.3 million. As a potential carryover project, unspent funds expected from 2023 (due to the overall schedule changes to align with the outage) will support project costs in 2024 to replace aged relay panels and two 115 kV breakers, along with related control cables and high-voltage switchgear. Following Platte River design work, contractors will complete ground and foundation work and remove existing equipment. Platte River substation teams expect to complete installation and inspections in 2025.

Replacement of aged, single-phase 230-115 kV transformers with a single three-phase autotransformer will continue at two substations in 2024. Platte River plans to invest $1.6 million at the Longs Peak Substation near Longmont and approximately $3 million at the Timberline Substation in Fort Collins. In addition to other activities, crews will upgrade control panels to align with current design standards at both substations, which will improve performance and reliability and will efficiently accommodate future maintenance. These multiyear projects represent total investment of $5.1 million and $5.3 million, respectively.
**Fiber optics**

Platte River’s fiber optic system enables efficient data communications between generation and transmission assets and gives the owner communities robust communications service capabilities. Approximately $1.8 million is budgeted in 2024 to replace the section of Long-Haul East overhead fiber cable from Boyd Substation in Loveland to Longs Peak Substation in Longmont. The project will also increase fiber strand capacity and reduce outage risk.

**Billable projects**

In 2024, Platte River staff will collaborate with the owner communities and other regional partners on several transmission and substation upgrades and enhancements that benefit and will be billed to others. Examples include switchgear replacement and transmission line modifications necessitated by road improvements. While these projects, with estimated total billing of $3.8 million during 2024, are fully funded by third-party facility owners and therefore not included in budget appropriation, Platte River staff will support design, engineering and project management to help maintain the safe and reliable operation of the transmission network.

**Energy efficiency programs**

The DES team works collaboratively with the owner communities to provide DES to their customers under the Efficiency Works brand. In 2024, Platte River will invest $10 million by continuing to offer efficiency programs while expanding DES through the deployment of additional DER technologies to support the RDP, as discussed in the strategic initiatives section. Efficiency programs target 18,016 MWh of energy savings (using Platte River funds), with a potential 1,198 MWh of additional savings from anticipated owner community funds, for total potential portfolio energy savings of 19,214 MWh.

Funding provided by the owner communities is managed under an intergovernmental agreement, and owner communities may supplement Platte River’s budget for these programs. Supplemental funding is used only after Platte River’s budget is exhausted so that each community receives its load-ratio share of benefits through DES offerings. Projects under approved agreements and rebate applications are completed on a timeline determined largely by program participants (customers and their contractors). As a result, some projects intended for the current budget year could be moved into the next budget year if not completed. Conversely, a budget contingency may be required if projects are completed earlier than planned.

**Personnel**

Approximately 26% of the operating expense budget relates to employee salaries and benefits, which include retirement, medical and dental. Combined, these expenses are expected to rise 15.2% from 2023. For 2024, Platte River will begin to implement salary market adjustments from the compensation study conducted in 2022. Benefits for employees are spread across all functional areas as a percentage of salaries.
As timelines advance on strategic initiatives, new positions will require additional staffing. Platte River evaluates all vacancies to determine and align resources where they are needed most. Platte River evaluated and repurposed seven positions across all divisions in the organization to meet current and future needs. For 2024, Platte River will add 14 new positions, two of which were out of cycle additions from 2023. Of these new positions, three serve in business strategies, two in general counsel, four in transition and integration services, two in financial services and three in generation and transmission. From time to time, Platte River may reorganize its reporting structures and repurpose positions to better align with its strategic initiatives. Below is a summary of full-time positions by division, based on organizational structure at each year presented.

(1) Reflects adjustment for one position added in 2022.

### Revenues

Platte River anticipates approximately $313 million in revenues during 2024. The majority of revenues, 75%, are derived from energy sales to the owner communities. The remainder are derived from sales for resale, wheeling, interest and other income. Owner communities’ loads are forecasted to increase 0.4%. Revenues from sales for resale and wheeling are 21% of revenues and are expected to decrease by approximately $9.3 million due primarily to less volume of energy sold, partially offset by increased average market price and revenues for use of Platte River’s transmission system. Platte River entered into multi-year contracts providing revenue certainty for a portion of sales for 2024 through 2026.

Platte River provides stable and financially sustainable wholesale rates while advancing the RDP. Platte River’s rate philosophy includes implementing incremental increases to provide a more predictable path of smaller, more consistent annual rate increases. The 2024 budget includes a 5% average wholesale rate increase, which reflects implementation of the board-approved deferred revenue and expense accounting policy. This accounting policy helps reduce rate pressure during the resource transition and supports greater long-term rate stability.

Platte River’s rate structure provides unbundled transmission and generation rates and transparent fixed and variable costs. The rate structure adds value to the owner communities by offering a desirable portfolio of services that meet community needs, more accurately aligning wholesale time-of-use pricing signals with costs of service and sending clear pricing signals that lead to system benefits. Additional information about rates is available on Platte River’s website at prpa.org/wholesale-rates.
FINANCIAL REVIEW

In addition to the budget items discussed, the financial results shown below are compared to Platte River’s SFP metrics, with more information on those metrics included in the financial governance section. In the years represented, all financial metrics were or are expected to be met.

Depreciation, amortization and accretion expense is a non-budgeted expense and is expected to increase in 2024 by $4.6 million. Depreciation expense relates to capital assets in use and will increase as a result of new capital improvements placed into service and refinements of estimated useful lives as future capital needs are evaluated. Amortization expense relates to other assets due to board-approved accounting policies and Governmental Accounting Standards Board (GASB) pronouncements. Amortization expense will increase as the ERP is placed into service and for an increase for the Trapper Mine post-mining reclamation estimate. Accretion expense relates to the accrual for the board-approved accounting policy for decommissioning costs at the Craig Generating Station, which increases annually for inflation. The financial governance section includes more information on board-approved accounting policies.

(1) 2022 actual and 2023 budget metrics reported accord with the SFP in effect for 2022. 2023 estimate and 2024 budget metrics reported accord with the SFP in effect for 2023.

(2) 2023 estimate represents ten months actual and two months budget adjusted for revised projections on all budget schedules.

(3) 2022 actual, 2023 estimate and 2024 budget include a portion of revenues that was or is projected to be deferred under the board-approved deferred revenue and expense accounting policy.

---

1. Effective June 2020, Spring Canyon II and III energy and renewable attributes have been sold to a third party. At the end of the 10-year sales contract, the energy and renewable attributes will return to Platte River.

2. Effective October 2018, Silver Sage energy and the renewable attribute have been sold to a third party.

3. WAPA-CRSP capacity amounts shown represent the contract rate of delivery. Actual capacity available varies by month. During the summer season, estimated available capacity ranges from 34 MW to 51 MW. In the winter season, estimated available capacity ranges from 40 MW to 48 MW. Available capacity and energy may fluctuate with drought conditions.

4. WAPA-LAP actual capacity available varies by month. During the summer season, available capacity ranges from 23 MW to 30 MW. In the winter season, available capacity ranges from 26 MW to 32 MW.

5. Owner community solar programs: Fort Collins = 4.022 MW, Loveland = 0.333 MW. The owner communities retain the renewable attributes.
REVENUES

Operating revenues

Platte River’s operating revenues consist of sales to owner communities, sales for resale and wheeling revenues. The production cost model determines the forecast of revenues for the budget; however, actual results are strongly influenced by weather and various market conditions and will vary from budget.

Sales to owner communities

Budgeted revenues from sales to owner communities are based on Platte River’s load forecast and tariff charges. Average wholesale rate increases, when applicable, support Platte River’s strategic initiatives and core operations. Sales to the owner communities represent the largest source of revenue.

Sales for resale

Sales for resale include long-term sales and short-term sales. Long-term sales are for a contracted term greater than one year. Short-term sales are for a term of one year or less and include seasonal, monthly, day-ahead and real-time bilateral and market sales. Platte River may also sell excess capacity. The production cost model determines the volume and price of sales for resale for the budget based on current market projections.

Typically, Platte River sells when energy available exceeds requirements of the owner communities and prices are higher than the marginal cost resource. Because of Platte River’s must-take obligations under noncarbon PPAs, certain sales may reflect that it is more economical to sell energy at a low price than to curtail generation. These sales typically occur when the coal-fired facilities are at minimum output levels. Platte River’s participation in WEIS helps further manage and dispatch the must-take energy on the system and allows more economic dispatch of regional resources.

Sales for resale contribute to low rates for the owner communities, help manage variability and high noncarbon output during lower load conditions and benefit the regional grid by providing access to the reliable, economic and environmental performance of Platte River’s baseload resources.

Wheeling

Wheeling revenues represent payments from other parties that use Platte River’s transmission system. Platte River charges others for transmission service under its Wholesale Transmission Service tariff. The transmission system usage rates are adjusted annually based on the prior year’s actual transmission system costs and loads.
Other revenues

Interest and other income

Interest and other income represent a small portion of the revenue budget, but Platte River expects a significant increase in interest income due to higher interest rates. Interest income fluctuates with investment balances and interest rates. The sale of Windy Gap water units and above-budget overall financial results have improved investment balances over the past several years. Other income includes fiber and tower leases, fiber administration fees and other miscellaneous revenues.

(1) Intermittent is energy delivered from Roundhouse, Medicine Bow, Rawhide Flats Solar and Rawhide Prairie Solar.
OPERATING EXPENSES

Expenses incurred to generate and deliver electricity include purchased power, fuel, production, transmission and administrative and general. In addition, operating expenses include investments in DER. The production cost model determines the budgeted expense for purchased power and fuel, whereas expenses for production, transmission, administrative and general and DER are predominately determined by departmental budgets. Platte River emphasizes preventive and predictive maintenance to help control expenses while also investing in strategic initiatives and accomplishing the RDP goal.

Purchased power

Purchased power is the largest classifications of operating expenses. Purchased power includes purchases under long-term contracts for wind, hydropower and solar energy. Other purchases supplement additional energy requirements. Platte River also includes an accrual for estimated future replacement power costs during specified maintenance outages when applicable. Purchased power fluctuates with outages and market conditions. When market prices are low, Platte River may decide, for economic reasons, to purchase rather than generate from a coal-fired or natural gas facility. Through market purchases, Platte River is able to take advantage of low-cost energy when pricing is less than marginal production costs.

Platte River continues to diversify its resource portfolio by adding more noncarbon resources and by relying less on coal-fired resources through the PPAs listed below.

Wind

Wind generation includes 303 MW of nameplate capacity (67 MW of ELCC) provided under long-term PPAs. The agreements are for deliveries from the following facilities.

- Roundhouse Wind Energy Center (225 MW) in Wyoming; contract ends May 31, 2042.
- Spring Canyon Wind Energy Center Phase II and III (60 MW combined) in Colorado; contracts end Oct. 31, 2039, and Dec. 10, 2039, respectively. To accommodate additional energy available from the Roundhouse Wind Energy Center and reduce ancillary services expense, Platte River has sold the energy and renewable attribute from these sites under a 10-year contract that began in 2020. This energy is therefore not delivered to the owner communities for the term of the sales contract. At the end of the sales contract, the energy will return to Platte River.
- Silver Sage Windpower Project (12 MW) in Wyoming; contract ends Sept. 30, 2029. To accommodate additional wind available from the Roundhouse Wind Energy Center and to reduce transmission and ancillary services expenses, Platte River has sold the energy and renewable attribute from this site under a long-term contract. This energy is therefore not delivered to the owner communities.
- Medicine Bow Wind Project (6 MW) in Wyoming; contract ends Dec. 30, 2033.
**Hydropower**

Platte River receives hydropower under two long-term contracts with WAPA. The hydropower contracts are subject to periodic price changes. The CRSP and LAP contracts end Sept. 30, 2057, and Sept. 30, 2054, respectively.

- CRSP contract rate of delivery amounts are 106 MW in the summer and 136 MW in the winter, which are not being met due to drought conditions. Actual capacity available varies by month. During the summer season, estimated available capacity ranges from 34 MW to 51 MW. In the winter season, estimated available capacity ranges from 40 MW to 48 MW. Available capacity and energy may further change with drought conditions, and as conditions worsen, there may be periods where no energy is delivered.

- LAP capacity is 30 MW in the summer and 32 MW in the winter. The available capacity from LAP varies from 23 MW to 30 MW in the summer season and 26 MW to 32 MW in the winter season.

**Solar and battery storage**

Solar generation includes 52 MW of nameplate capacity (22 MW of ELCC) with 2 MWh of battery storage provided under long-term PPAs. The agreements are for deliveries from the following facilities.

- Rawhide Flats Solar facility (30 MW) located at the Rawhide Energy Station; contract ends Dec. 14, 2041.
- Rawhide Prairie Solar facility (22 MW) located at the Rawhide Energy Station; contract ends March 18, 2041. This project has an integrated battery storage system of 2 MWh, which can be discharged once daily at a rate up to 1 MW per hour.

**Other purchases**

Market purchases provide energy through participation in WEIS, which provides access to lower-cost resources and increased operational efficiencies while enhancing reliability. WEIS is a real-time organized energy market operated by SPP, in which generation and load are balanced regionally based on marginal cost and generation resource characteristics calculated for every five-minute interval. Platte River entered WEIS in April 2023 and will participate until joining RTO West. Additional information about WEIS is available on SPP’s website at spp.org/weis.

Bilateral purchases involve a single counterparty and are specifically negotiated deals. These provide energy to satisfy loads, replace power during outages and meet reserve requirements.

Platte River purchases capacity of approximately 4.022 MW and 0.333 MW from Fort Collins and Loveland community solar facilities, respectively. For these two facilities, the owner communities retain the renewable attributes and the facilities are not part of Platte River’s noncarbon resource portfolio.
Platte River has a forced outage exchange agreement with Tri-State. If either Rawhide Unit 1 or Tri-State's Craig Unit 3 is out of service, the other utility will provide 100 MW of generation on a short-term basis not to exceed one week per forced outage. The agreement is in effect until March 31, 2024.

**Maintenance outage accrual policy**

This policy allows replacement power for Rawhide Unit 1 scheduled maintenance outage costs exceeding $5 million to be spread over the interim period between outages to smooth rate impacts to the owner communities.

**Fuel**

Fuel expense is one of the largest classifications of operating expenses, although it has declined as a percentage of total operating expenses as fossil fueled generation becomes a smaller component of Platte River's resource portfolio. Changes to market conditions, primarily in coal and natural gas pricing, have significant impact on fuel expense. Fuel expense includes coal purchased for Rawhide Unit 1, Craig units 1 and 2 and natural gas purchased for the combustion turbines. The production cost model determines the majority of fuel expense for the budget year, which fluctuates as resource availability changes with outages and market conditions, including weather.

Rawhide Unit 1 (280 MW) is Platte River's largest baseload resource and has historically operated at a high capacity factor. As Platte River adds more noncarbon energy to its resource portfolio and participates in organized energy markets that help balance regional noncarbon generation, Rawhide Unit 1 will operate at lower load levels to accommodate higher renewable output. Platte River continues to assess the full impact of these operational changes.

Platte River purchases coal for Rawhide Unit 1 under a long-term contract that supplies all coal needed through the unit’s useful life. The coal price defaults to a market index unless Platte River chooses to use price lock provisions outlined in the contract, which Platte River has exercised for all 2024 projected coal purchases. The current Rawhide coal contract is for low-sulfur coal from Antelope Mine in the Powder River Basin in Wyoming. A long-term transportation contract through 2026 establishes a base rate per delivered ton, which is subject to an annual adjustment based on specified indices and a fuel adjustment charge.

Platte River owns 18% of Craig units 1 and 2 (151 MW combined). Platte River purchases coal for the Craig units under the long-term contract with Trapper Mining, Inc. that runs through 2025. Platte River has a minority ownership share of the mine. Platte River will work to structure future fuel supply contracts and fuel inventory levels to align with operations and the planned closure timelines of the Craig units. Recent changes in mining technique to lessen the environmental impact and reduce future reclamation burden have increased price volatility for coal delivered from Trapper Mine.

Natural gas-fired combustion turbines include five simple-cycle combustion turbines: four GE 7EAs (Rawhide units A, B, C and D, 65 MW each) and one GE 7FA (Rawhide Unit F, 128 MW). The combustion turbines meet peak load demand, provide reserves during outages of
the coal-fired units and serve sales for resale. Platte River purchases natural gas at market prices as needed. Natural gas needs fluctuate with load, market energy prices and the addition of noncarbon energy resources.

**Production**

Production expenses include operations and maintenance expenses (excluding fuel) incurred for the Rawhide Energy Station, the Craig Generating Station and power operations. The Rawhide expenses are predominately determined by departmental budgets. Craig expenses are determined by Tri-State, the operating agent, and approved by the engineering and operations committee of which Platte River is a member. An accrual for estimated future costs during specified Rawhide maintenance outages is also included.

**Rawhide Energy Station**

Rawhide Unit 1 is Platte River’s largest resource and will retire by December 2029. Platte River plans continued investment in preventive and predictive maintenance so that the resource is reliable, safe and compliant through its remaining operating life. Through this proactive and planned approach, ongoing operations and maintenance expenses have been consistent from year to year. Regular outages are required to keep the unit operable and reliable. An accrual for estimated future costs during specified maintenance outages of Rawhide Unit 1 is also included and smooths out costs of outages over a longer period. Historically, Rawhide Unit 1 has had major outages about every three years, with a scheduled minor maintenance outage about halfway between scheduled major maintenance outages. Platte River is evaluating future scheduled outages as the unit nears retirement, which will materially impact remaining outage needs. Scheduled maintenance outages are also required for the combustion turbines, based on the number of unit starts. Due to more frequent starts, outage needs have increased in recent years. Personnel expenses that are charged to operations and maintenance can fluctuate with labor charged to capital projects and fluctuations in headcount in any given year.

**Craig Generating Station**

Routine operations and maintenance expenses for Craig units 1 and 2 have decreased slightly as participants are prudently investing in the Craig units to maintain reliability until retirement. Scheduled maintenance outages typically cause a non-recurring increase in expenses. To limit reliance on coal-fired resources and avoid excessive capital costs to comply with changing environmental regulations, participants in Craig units 1 and 2 agreed to retire the facilities by December 2025 and September 2028, respectively.

**Power operations**

Power operations relates to managing resources, including purchases, to meet load and sales for resale obligations. The focus is to provide the owner communities with a reliable energy supply, cost-effectively optimize how that demand is served and create additional value through the sale of available energy and capacity to third parties.
Transmission

Transmission maintenance is important to support the safe and reliable delivery of power across Platte River’s regional transmission system. Transmission expenses also include Platte River’s share of operating and maintaining jointly owned transmission facilities, ancillary services for regulation of wind and solar, and wheeling expenses paid to WAPA and others for wind and a portion of Platte River’s load. Transmission expenses are primarily developed through departmental budgets. Personnel expenses that are charged to operations and maintenance can fluctuate with the amount of labor charged to capital projects and fluctuations in headcount in any given year.

Administrative and general

Administrative and general expenses include all expenses incurred that are not directly allocated to capital or assignable to fuel, production, transmission or DER. These expenses include those related to the general manager, communications, community and government affairs, human resources, safety, general counsel, digital, financial services, facilities and fleet. The largest expense is personnel, which includes salaries and benefits. With the changing environment and continued focus on operational excellence, Platte River has made investments and will continue to invest in employees to achieve strategic initiatives and goals. These investments emphasize general counsel, business strategies and transition and integrations services.

Distributed energy resources

DER expenses include all expenses to administer and implement Platte River’s DER programs. Energy efficiency and demand response programs, early forms of DER, began in 2002 with a budget of $0.4 million. DES investment continues due to its success and positive system and community benefits. Development and testing continue with other DER, DERMS and demand response programs as Platte River continues to implement the long-range DER strategy to support the resource diversification planning and integration strategic initiative and the RDP.

CAPITAL ADDITIONS

Capital projects are viewed strategically with a long-term outlook to support Platte River’s foundational pillars to safely provide reliable, environmentally responsible and financially sustainable energy and services to the owner communities, as well as strategic initiatives and core operations. Capital additions generally consist of projects to maintain and improve system reliability, replace and upgrade aging infrastructure, implement technology improvements, diversify and transition resources, maintain compliance and improve efficiency.

Production capital additions include new aeroderivative combustion turbines, power plant upgrades and equipment replacements as well as compliance-related projects at the Rawhide and Craig generating stations. Transmission capital additions include transmission lines, substations and supporting equipment. Projects are based on transmission studies and consultation with the owner communities’ staff through the joint technical advisory committee. These projects will enhance system reliability and add capacity to serve new and existing loads as well as allow future noncarbon projects. General plant capital additions include computer hardware and implementation costs associated with subscription-based information technology arrangements, communication equipment, building modifications and other general plant equipment purchases. Asset retirement obligations include payments to satisfy legally enforceable liabilities associated with the retirement of a tangible capital asset such as an impoundment or electric generation facility.

The five-year capital forecast is developed to outline future investment in capital projects. Capital planning is an ongoing effort as needs change, so Platte River reviews and updates the plan three times annually along with financial projections. The plan is the basis for each budget year. Production projects focus on plant equipment improvements, including equipment replacements or enhancements during scheduled maintenance outages, dust collection system replacements, combustion component upgrades, controls hardware upgrades and the new aeroderivative combustion turbines. Transmission projects focus on new substations for new noncarbon resources, substation expansion for the new aeroderivative combustion turbines, a new transmission line and interconnection assets for noncarbon resources, transformer replacements, transmission line replacement, and include coordinating and planning owner community requests for substation additions. Future general plant projects include replacing information technology equipment, fiber optic cable and equipment replacements, implementing strategic software solutions including DERMS, additional energy market software and the ERP that will benefit the entire organization. Asset retirement obligations consist of reclamation activities at Trapper Mine.

Project management continues to be a focus. In the past several years, Platte River has emphasized resource availability and improving project planning and execution. This process will continue to evolve, striving toward operational excellence. Projects typically experience schedule changes for various reasons; therefore, staff will request a portion of unspent 2023 budget capital additions be carried over into the 2024 budget. Supply chain issues
experienced during 2023 have dictated many schedule changes. Current lead times and resource constraints have been considered in the 2024 budget, but evolving economic conditions create uncertainty.

The next pages include project descriptions as well as estimated project cost and carryover amounts, noting which projects support strategic initiatives.

<td><strong>Aeroderivative combustion turbines - Rawhide</strong></td>
<td>$4,606,284</td>
</tr>
<tr>
<td>Project time frame: 2024-2027</td>
<td></td>
</tr>
<tr>
<td>Total cost estimate: $239,041,000[1]</td>
<td></td>
</tr>
</tbody>
</table>

Construct flexible, high-efficiency, low-carbon aeroderivative combustion turbines at Rawhide Energy Station to support the reliable transition to a noncarbon energy portfolio supporting the RDP. This resource will support system reliability as other firm, noncarbon technologies such as long-duration storage or green hydrogen develop and reach maturity. Funds budgeted in 2024 will be used for detail design, including capacity and technical specifications.

(1) - Total cost estimate is based on 160 MW of capacity. In 2024, capacity of the project and cost estimates will be updated as part of the 2024 Integrated Resource Plan.

<table>
<thead>
<tr>
<th>Description</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Compressor blade upgrade - combustion turbine Unit F</strong></td>
<td>$1,861,451</td>
</tr>
<tr>
<td>Upgrade the first row of rotating blades and the first five rows of stationary blades in the compressor section of combustion turbine Unit F. The manufacturer identified the rotating blades are susceptible to distress in the dovetail of the blade and pose a risk for blade liberation. Platte River's insurance provider has also recommended that the compressor section of the unit be upgraded to address concerns with the front end of the compressor. Upgrading the compressor blades may allow additional unit output due to improved air flow through the compressor and will improve rub tolerance of the blades during operation.</td>

</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Description</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Evaporative cooling and wet compression - combustion turbine Unit F</strong></td>
<td>$1,546,510</td>
</tr>
<tr>
<td>Add an evaporative cooling technology known as fogging and wet compression to combustion turbine Unit F to increase energy output during summer months. The project includes two high pressure pump skids, stainless steel high pressure feed lines, two fog nozzle arrays and associated electrical and control instrumentation. Water introduced in the inlet ductwork will fully evaporate prior to reaching the turbine blades, alleviating concerns of erosion of the compressor blades and results in a negligible effect on the gas turbine maintenance interval. Fogging and wet compression have the potential to reduce heat rate, fuel costs and nitrogen oxide emissions due to the increased water vapor content of inlet air.</td>
<td></td>

<tbody>
<tr>
<td><strong>Evergreen controls hardware upgrade - Rawhide Unit 1</strong></td>
<td>$1,111,332</td>
</tr>
<tr>
<td>Project time frame: 2024-2025</td>
<td></td>
</tr>
<tr>
<td>Total cost estimate: $1,941,000[1]</td>
<td></td>
</tr>
</tbody>
</table>

Upgrade the hardware for the evergreen controls to the latest Ovation revision and replace hardware and network switches with security enhancements. The hardware is at the end of its useful life and part failures may cause downtime for the operator console which can diminish monitoring capabilities.
Gas control valve replacement - combustion turbine Unit C

Replace all existing electro-hydraulic stop-speed ratio valves and gas control valves with electric-actuated valves on combustion turbine Unit C. The project includes replacement of the inlet guide vane actuator and positioner, installing new digital valve positioners for each component, new wiring and conduit and integration into the Ovation distributed control system. The current electro-hydraulic valves require disassembly, cleaning and rebuild every other year to prevent clogged servos and filters. The current valves have also been problematic during cold weather operation. Removal of the hydraulic oil system minimizes safety and environmental hazards. The new electric-actuated valves will increase reliability and provide advanced diagnostic capabilities.

Bently system upgrade - Rawhide

Upgrade the Bently system which performs vibration monitoring on rotating equipment. The system is at the end of its useful life and will be upgraded to the latest software. Additional monitoring probes will be installed on equipment such as induced draft fans and atomizers allowing troubleshooting capabilities prior to equipment failure.

Transformer nitrogen generator - Rawhide Unit 1

Replace nitrogen bottles on three generation step-up transformers, one unit auxiliary transformer and two reserve auxiliary transformers with a nitrogen generator. Nitrogen is the inert gas used to seal off the transformer from outside air keeping moisture, oxygen and any other hazardous gases out of the transformer headspace. Each transformer has its own nitrogen cabinet consisting of a bottle of nitrogen. These transformers are checked four times in a 24 hour period by plant operators which entails walking to each transformer, opening a cabinet and recording the reading. The nitrogen generator will pipe nitrogen to each transformer and pressure readings will be located in a single location for verification.

pH and conductivity analyzer replacements - Rawhide Unit 1

Replace up to six transmitters, associated instrument housing and cabling for the cycle chemistry lab and potable water system at Rawhide Unit 1. Online potential hydrogen (pH) and conductivity analysis throughout the boiler and steam cycle provide critical information on potential condenser tube leaks, boiler tube leaks, system contamination and cycle chemical treatment effectiveness. The current transmitters are outdated and provide inconsistent results. Updating the transmitters to a uniform model and manufacturer would provide ease of operation. Newer transmitters would also increase troubleshooting capability, increasing reliability of information.
### Station service battery bank replacement - combustion turbine Unit F
$40,187
Replace the station service battery bank for combustion turbine Unit F. The project includes disposal of the existing batteries, installation and load testing to verify the batteries are performing as required. The current battery bank is at the end of its useful life. Direct-current power from the battery bank is vital for safety relaying and operation of the circuit breaker. If the unit trips, the battery bank is the energy source to operate oil pumps and other protective equipment to keep the unit safe until another source of power is restored or the unit is able to be brought offline in a controlled manner.

### Uninterruptible power supply replacement - gas yard
$39,028
Replace the uninterruptible power supply at the gas yard as the current system is reaching the end of its useful life. This system provides power to bath heaters and other gas yard controls equipment in the event there is a loss of primary and secondary power sources.

### HVAC replacement - rotary car dumper server room
$26,782
Replace the HVAC unit in the rotary car dumper server room which houses critical control system computer equipment for fuel handling. The current unit is at the end of its useful life and has coil damage from hail storms.

### Total Rawhide projects
$10,256,875

### Rawhide purchases

#### Floor machine replacement - Rawhide
$46,640
Purchase a riding floor scrubbing machine to clean the plant floors which will replace the existing floor machine that has reached the end of its useful life.

#### Extrication tool replacement - Rawhide
$33,000
Purchase extrication tools to replace the existing hydraulic extrication tools that have reached the end of their useful life. The new battery-powered tools are portable and can be utilized for rescue within more areas of the plant. The tools will also be cordless to avoid tripping hazards and are lighter in weight to reduce user strain and fatigue.

#### Scissor lift - Rawhide
$20,000
Purchase a 500-pound, two-person capacity scissor lift. A scissor lift is a safe, efficient and effective way to work from heights. The scissor lift can be moved on the elevator allowing it to be used on different floors in the main plant. The scissor lift can also be used in the combustion turbine yard and throughout the facility in different applications.

### Total Rawhide purchases
$99,640
### Other production projects

Transmission capital additions

Transmission projects

- **Solar substation 230 kV - Severance Substation**
  - Project time frame: 2021-2024
  - Total cost estimate: $13,074,000
  - Carryover estimate: $4,058,000
  Construct a 230 kV substation to connect additional noncarbon resources to the Front Range transmission system. As part of the project, existing transmission line structures will be modified to route the lines into the new substation.

- **Transformer T3 replacement - Timberline Substation**
  - Project time frame: 2021-2024
  - Total cost estimate: $5,298,000
  - Carryover estimate: $487,000
  Replace the existing three single-phase 230-115 kV transformers with a single three-phase 230-115 kV autotransformer at Timberline Substation. In addition, a new 230 kV circuit switcher and 115 kV circuit switcher will be installed, and three 115 kV disconnect switches will be replaced. The disconnect switches have higher than normal test measurements. The manufacturer has discontinued production of the switches making replacement parts difficult to find. The scope of the project also includes completing a transformer specification and formal bid process; designing and installing a new foundation and oil containment system to accommodate new equipment; modifying the high voltage and low voltage connections; modifying the existing sensing and monitoring system; and modifying the ground grid system. The existing transformer is reaching the end of its design life and needs to be replaced in order to maintain reliable operation of the system.
Transformer T1 replacement - Longs Peak Substation  $1,618,287

Project time frame: 2022-2025
Total cost estimate: $5,070,000
Carryover estimate: $67,000

Replace the existing three single-phase 230-115 kV transformers with a single three-phase 230-115 kV autotransformer at Longs Peak Substation. In addition, a new 230 kV circuit switcher and 115 kV circuit switcher will be installed with associated disconnect switches, and the remote terminal unit (RTU) will be replaced. The scope of the project also includes completing a transformer specification and formal bid process; designing and installing a new foundation and oil containment system to accommodate new equipment; modifying the high voltage and low voltage connections; modifying the existing sensing and monitoring system; and modifying the ground grid system. In addition, Platte River will upgrade the control panels in the building per current Platte River design standards. The existing transformer is reaching the end of its design life and needs to be replaced in order to maintain reliable operation of the system. The new relay panels are designed with more space and with removal panels to accommodate future replacement projects. There are multiple relays at the end of their useful lives that are being replaced in a continuous effort to modernize the grid. The new relays have the latest hardware that provides the processing power necessary to capture high resolution system data which is used to further improve the transmission system’s operation. The existing panels were manufactured using a wire labeling method not consistent with Platte River standard. This nonstandard labeling makes routine maintenance and troubleshooting difficult. The new relay panels will be constructed per Platte River’s labeling standard.

Bay connection and transmission line to Severance Substation - noncarbon resources  $1,529,155

Project time frame: 2024-2025
Total cost estimate: $4,302,000

Install two 230 kV breakers, conduit systems, disconnection switches, substation support structures, foundations, grounding systems, high voltage bus jumpers, control wiring and alternating current and direct current power circuits. This project is required to prepare a bay at the substation and build a one-mile transmission line to interconnect a new 230 kV solar generation resource to the existing transmission network. Total cost estimate provided represents Platte River’s portion of the project cost as the project is partially reimbursable by the interconnecting customer.

Circuit breaker replacement 592, 596 - Ault Substation WAPA  $878,000

Replace two 345 kV power circuit breakers at the Ault Substation. The existing breakers have experienced sulfur hexafluoride gas leaks in recent years and are approaching the end of their useful life. Platte River is a party to contract 87-LAO-285 which states Platte River’s ownership and financial obligation to the Ault facilities. Platte River is responsible for 40% of the total project cost.

Circuit breaker replacement 492, 1092, 3124, 3224 - Ault Substation WAPA  $751,800

Replace four 345 kV power circuit breakers at the Ault Substation. The existing breakers have experienced sulfur hexafluoride gas leaks in recent years and are approaching the end of their useful life. Platte River is a party to contract 87-LAO-285 which states Platte River’s ownership and financial obligation to the Ault facilities. Platte River is responsible for 28% of the total project cost.

<td>Transmission line vault upgrades - Rogers Road Substation</td>
<td>$368,368</td>
</tr>
<tr>
<td>Project time frame: 2017-2024</td>
<td></td>
</tr>
<tr>
<td>Total cost estimate: $773,000</td>
<td></td>
</tr>
<tr>
<td>Carryover estimate: $166,000</td>
<td></td>
</tr>
</tbody>
</table>

Upgrade two vaults to separate the existing 115 kV underground transmission line circuits. Currently, two 115 kV circuits reside in single chamber common vaults which require both circuits to be deenergized to perform any maintenance on the lines. Creating a dual chamber vault will provide each 115 kV circuit their own separate chamber. This configuration will require only a single-circuit outage to perform vault maintenance activities and a single transmission line can remain energized to serve the substation.

<table>
<thead>

<tr>
<td>Carryover estimate: $215,000</td>
<td></td>
</tr>
</tbody>
</table>

Design and replace two miles of the Drake transmission line. Funds budgeted in 2024 will be used for preliminary design work and project evaluation. Inspections completed in 2019 on the 115 kV transmission line located along Drake Road in the City of Fort Collins between the Drake Substation and the Power Trail noted significant corrosion on the base plates, anchor bolts and pole base sections. Rebuilding is necessary to continue safe and reliable operation of the transmission line.

<tr>
<td>City of Longmont</td>
<td>$9,090</td>
</tr>
<tr>
<td>City of Loveland</td>
<td>$9,090</td>
</tr>
</tbody>
</table>

**Total cost estimate:** $3,836,000

*Project time frame: 2024-2026*

Design, procure and construct the infrastructure to interconnect a battery storage system to the electric distribution network. The interconnection facilities include medium voltage cables, medium voltage relaying, medium voltage interrupters, conduit systems, control equipment, metering equipment and communication equipment.

### Substation expansion and reliability upgrade - Rawhide Substation

<table>
<thead>
<tr>
<th>Substation Expansion</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rawhide Substation</td>
<td>$32,320</td>
</tr>
</tbody>
</table>

**Total cost estimate:** $13,532,000

*Project time frame: 2024-2027*

Design and construct an expansion of the existing Rawhide Substation yard to provide additional interconnections for new generation resources. The scope of this project includes the redevelopment of an area of land on the Rawhide site to install new substation equipment; site grading to accommodate the new equipment and proper drainage; and installation of additional perimeter fencing, a ground grid, 230 kV bus, 230 kV breakers, 230 kV switches, capacitor coupled transformers, relaying and a control enclosure. Funds budgeted for 2024 will be used for preliminary design work and project evaluation.

### HVAC unit replacements - substations

<table>
<thead>
<tr>
<th>Substation</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Portner Substation</td>
<td>$22,419</td>
</tr>
</tbody>
</table>

Replace HVAC units at Portner Substation. The units are at the end of their useful life, have been costly to maintain and are having trouble keeping building temperature at required levels. These replacements are part of a multiyear initiative to replace all units at all substation and auxiliary buildings.

### Transmission digital fault information network - Portner Substation

<table>
<thead>
<tr>
<th>Substation</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Portner Substation</td>
<td>$21,558</td>
</tr>
</tbody>
</table>

Purchase and install a microprocessor-based device designed to integrate with existing relays installed at the Portner Substation. Frequently, faults occur on the system during inclement weather conditions. This system will collect fault event data automatically, which eliminates the need to dispatch a substation technician in inclement weather conditions to manually retrieve the data. Restoration times will be shortened as fault event data will be immediately collected and available for use.

**Total transmission capital additions**

| Amount | $15,074,991 |
**General plant capital additions**

**General plant projects**

- **Enterprise resource planning software**
  
  | Project time frame: | 2022-2024 |
  | Total cost estimate: | $10,620,000 |
  
  Replace multiple systems that have reached the end of their useful lives. The scope of applications to be replaced or added includes the general ledger, accounting, fixed assets, cash management, contracting, purchasing, project portfolio management, budgeting, forecasting and reporting systems for financial services. The new software will allow employees to work more efficiently with access to real-time data needed to make business decisions. In addition, new functionality within the selected system will offer modernized features to employees, improving reporting functionality and better aligning work products with organizational goals.

- **Distributed energy resources management system**
  
  | Project time frame: | 2024-2026 |
  | Total cost estimate: | $9,927,000 |
  
  Develop a system to enable the management of flexible DER that can provide customer and system benefits. The DERMS is being developed to enable DER visibility (through monitoring or modeling DER performance), predictability (through analytics, measurement and verification) and dispatchability (through direct control or price-responsive control by the customer) for DER brought into the system through programs or interconnection processes. The DERMS is intended to enable DER owners to enroll, interconnect and register their DER devices to provide services to the electric system in exchange for a share of system benefits they provide. The DERMS will provide Platte River the ability to operate DER to support integration of variable renewable energy by improving the accuracy of load forecasts and providing information on flexible DER performance. In addition, DERMS is expected to manage flexible DER as a hedge against cost risks of variable renewable energy oversupply or undersupply and will support system reliability.

- **Fiber optic cable replacement - Long-Haul East (Loveland to Longmont)**
  
  | Total cost estimate: | $1,825,557 |
  
  Replace the existing aerial 96 fiber strand cable section of Long-Haul East from Boyd Substation to Longs Peak Substation with a 144 fiber strand count underground cable. The existing Long-Haul East fiber cable is over 20 years old and, during spot checking, shows signs of ultraviolet and wear damage. This project will proactively replace a portion of the aerial cable to avoid failure in addition to adding capacity between the Boyd Substation and Longs Peak Substation.
- **Regional transmission organization market software**
  - Total cost estimate: $584,807
  - Project time frame: 2024-2025
  - Implement additional software modules needed to operate and perform activities in SPP RTO West. Modules included in this project enable developing and submitting bids, generation dispatching, receiving and shadowing settlements, performing analysis on RTO West results and integrating results with financial and other reporting tools.

- **Mechanical system redundancy - headquarters**
  - Total cost estimate: $768,000
  - Carryover estimate: $280,000
  - Project time frame: 2023-2024
  - Install a closed-loop fluid cooler to the headquarters building for mechanical system redundancy. Installation of this unit will allow all critical systems to stay online in the event the pond heat exchangers are unavailable. There is a known design flaw within the pond heat exchangers being corrected under warranty. However, Platte River would like to have full redundancy for all critical systems.

- **Operations analytics software**
  - Total cost estimate: $480,000
  - Develop a decision software system to improve descriptive, predictive and prescriptive operations analytics. This software system will optimize DER and renewable operational processes and improve efficiency. In addition, the system will analyze operational data to identify bottlenecks, optimize resource allocations, improve production planning and enhance overall operational performance.

- **Network replacement - headquarters**
  - Total cost estimate: $345,000
  - Replace network equipment that has reached the end its useful life at headquarters. Network equipment is replaced approximately every five years for compatibility, security, reliability and supportability reasons. Beyond five years, reliability of equipment decreases, annual maintenance costs from the vendor increase and availability of security patches becomes uncertain.

- **Microwave network replacement - headquarters to Estes Park**
  - Total cost estimate: $342,462
  - Replace the point-to-point microwave radio equipment at headquarters, Bald Mountain, Panorama Peak and Prospect Mountain. The existing microwave radio network used as a backup communications solution for the bulk electric system network is obsolete and has reached the end of its useful life. This solution is a unique backup network link into the Estes Park bulk electric system network and can operate in the event all fiber communications outside of Estes Park are down.
Perimeter detection system - LaPorte Substation (PSCo, Tri-State)  $ 218,009

Install forward-looking infrared thermal cameras to detect any perimeter breach into the LaPorte Substation. The project will include infrastructure on perimeter walls for mounting cameras and electronics. The cameras will be positioned on the perimeter wall and send alerts to Platte River security if the perimeter is breached. This system provides thermal alarm triggering which will add another layer of protection against vandalism, theft and malicious threats. In addition, perimeter lighting will be installed to aid in investigation and act as a deterrent upon alarm. The project will be billed in accordance with the LaPorte 115 kV Substation Participation Agreement with Public Service Company of Colorado (PSCo) and Tri-State. Platte River is responsible for 75% of the total project cost.

Backup recovery storage addition  $ 150,000

Purchase storage necessary to implement a single, centralized backup system. Platte River has multiple legacy backup systems that are being consolidated onto the new centralized platform. By consolidating all backup systems, Platte River will reduce training and support costs while enabling more employees to become subject matter experts on a single platform.

Storm water drainage - outbuildings  $ 141,379

Install piping on the west side of the maintenance shop to direct storm water from the downspouts into the underground storm water drainage system. Currently, storm water drains from the building directly onto paving on the west side of the building. During winter months, water freezes and creates large areas of ice resulting in a safety hazard for foot traffic and vehicles. This project will eliminate these safety hazards and reduce liability to Platte River.

Built-in shelving - headquarters  $ 54,349

Build custom drawing storage within the engineering plotter room at headquarters. Shelving will accommodate all drawings currently held in vertical and horizontal rack storage. The built-in shelving will allow for a more permanent and secure storage location for all drawing sets.

Data sharing remote terminal unit replacement - Crossroads Substation  $ 27,052

Replace the legacy remote terminal unit at Crossroads Substation. The current unit is being phased out by the manufacturer and replacement parts will become difficult to find. In order to maintain reliable operation of the transmission system, this unit will be replaced with a modern unit.

Global positioning system timing source replacement - Disaster Recovery Center  $ 10,769

Replace the global positioning system timing source equipment at the disaster recovery center. The timing source ensures all networking hardware is synchronized. The current timing hardware is obsolete and has reached the end of its useful life.

Total general plant projects  $ 12,786,795

Install piping on the west side of the maintenance shop to direct storm water from the downspouts into the underground storm water drainage system. Currently, storm water drains from the building directly onto paving on the west side of the building. During winter months, water freezes and creates large areas of ice resulting in a safety hazard for foot traffic and vehicles. This project will eliminate these safety hazards and reduce liability to Platte River.

Build custom drawing storage within the engineering plotter room at headquarters. Shelving will accommodate all drawings currently held in vertical and horizontal rack storage. The built-in shelving will allow for a more permanent and secure storage location for all drawing sets.

To consolidate all backup systems, Platte River will reduce training and support costs while enabling more employees to become subject matter experts on a single platform.

The project will include infrastructure on perimeter walls for mounting cameras and electronics. The cameras will be positioned on the perimeter wall and send alerts to Platte River security if the perimeter is breached. This system provides thermal alarm triggering which will add another layer of protection against vandalism, theft and malicious threats. In addition, perimeter lighting will be installed to aid in investigation and act as a deterrent upon alarm. The project will be billed in accordance with the LaPorte 115 kV Substation Participation Agreement with Public Service Company of Colorado (PSCo) and Tri-State. Platte River is responsible for 75% of the total project cost.

Replace the legacy remote terminal unit at Crossroads Substation. The current unit is being phased out by the manufacturer and replacement parts will become difficult to find. In order to maintain reliable operation of the transmission system, this unit will be replaced with a modern unit.

Replace the global positioning system timing source equipment at the disaster recovery center. The timing source ensures all networking hardware is synchronized. The current timing hardware is obsolete and has reached the end of its useful life.

Total general plant projects  $ 12,786,795
General plant purchases

Post-mining reclamation activity, which is an asset retirement obligation due to Platte River’s membership in Trapper Mining, Inc. and the Final Reclamation Agreement with its members. The amounts shown represent Platte River’s portion of the total expected cashflow for final reclamation and mine closure based on detailed engineering calculations for a third party to perform the required work. Reclamation and mine closure costs are reviewed annually, and the costs are allocated to the members of Trapper Mining, Inc. based on cumulative tons of coal delivered.

| Total 2024 capital additions | $39,243,003 |
DEBT SERVICE EXPENDITURES AND OTHER LONG-TERM OBLIGATIONS

Long-term financial projections aligned with SFP metrics determine the need for and timing of debt financings. Platte River’s adjusted debt ratio in 2024 is expected to be 23%, meeting its SFP adjusted debt ratio target of less than 50%. Debt proceeds historically have been used to finance production and transmission assets. Outstanding long-term debts and other obligations consist of fixed-rate debt issued under Platte River’s General Power Bond Resolution, lease and subscription liabilities due to accounting pronouncements requiring accounting treatment of certain contracts as financing arrangements, and amounts Platte River owes under a pooled financing arrangement. Debt service expenditures include principal repayments and interest expense for issued power revenue bonds and estimated principal payments and interest expense for lease and subscription liabilities.

Platte River is legally required to maintain a power revenue bond service coverage ratio of 1.10 times. To support strong long-term financial sustainability, Platte River also maintains a 1.50 times fixed obligation charge coverage ratio as an SFP metric and expects a 2024 fixed obligation charge coverage ratio of 1.89 times. This metric reclassifies debt-like obligations as fixed obligation charges. Debt-like obligations include demand or capacity payments on contracted assets and any debt service associated with off-balance sheet obligations. A minimum 1.50 times ratio provides sufficient annual cash flows to meet the legal minimum 1.10 times bond service coverage ratio and partially fund future capital additions. Platte River is not legally restricted on the amount of debt it can issue.

Platte River is committed to maintaining a strong credit rating, which is a significant factor in determining cost of debt. Platte River’s senior lien debt credit is rated AA by all three credit rating agencies: Moody’s Investor Service (Moody’s), Fitch Ratings (Fitch) and S&P Global Ratings (S&P). The key factors in determining these ratings are the diversity and economic strengths of the owner communities, Platte River’s financial position, the board’s willingness to raise rates, management expertise and overall competitive position.

**Lease and subscription liabilities**

In 2022, Platte River adopted the principles of GASB Statement No. 87, Leases. In 2023, Platte River will also adopt the principles of GASB Statement No. 96, Subscription-Based Information Technology Arrangements. These two accounting standards require leases and subscription-based information technology arrangements to be recorded as financing arrangements and the expenditures, previously considered operating expenses, to be classified as capital additions (as described in the capital additions section) or debt service, depending on the status of the underlying project at the time the expenditure is made. Accordingly, the 2024 budget includes appropriation for these types of payments meeting accounting standard recognition as debt service, which are also considered fixed obligation charges, and the related liabilities are included in the adjusted debt ratio.

</tbody>
</table>

(1) Recognition of subscription liabilities depends on ongoing contract review as GASB Statement No. 96 is implemented during 2023. Once the standard is fully implemented as part of the 2023 year-end process, 2022 financial statements will be restated to reflect the changes from adopting this accounting standard.

(2) Lease and subscription liabilities for the 2023 budget were not determined. No related debt service was identified for appropriation as accounting standards related to these types of financing arrangements had not been fully implemented at adoption.

Lease and subscription liabilities estimated funding above represents those contracts for which 2024 budget appropriations or expected year-end liabilities exist. Additional or changes to lease and subscription contracts or assumptions relating to those contracts, such as planned exercise of renewal options, may significantly impact future funding requirements.

Other long-term obligations

Platte River is a participant in a pooled financing arrangement that closed in 2021 to fund the Windy Gap Firming Project, which includes construction of the Chimney Hollow Reservoir. Due to alternate accounting treatment, the debt service payments under the pooled financing will be included in operations and maintenance and not accounted for as debt service. Instead, the liabilities are considered other long-term obligations. Payments are considered fixed obligation charges and the related pooled financing liabilities are included in the adjusted debt ratio.

The original pooled financing arrangement is not sufficient to fully fund completion of the project after increases due to a federal permit delay, environmental mitigation and enhancement, construction cost increases and additional engineering and construction management. Platte River is expected to provide an additional $8.2 million to $11.9 million, likely through increasing the amount of existing pooled financing funding, near the end of 2024. This increase in the pooled financing arrangement is not reflected in the tables below as the amount and repayment schedule are not final and therefore remain subject to material uncertainty. Consistent with the alternative accounting treatment of the original balances,
any increase to payments for additional pooled financing funding will be included in operations and maintenance and not accounted for as debt service.

## Other long-term obligations

[1] Fixed obligation charges are debt-like obligation payments as defined in the SFP.

[2] This value includes lease and subscription debt service expenditures that are not included in operating expenses.
BUDGET PROCESS

Platte River is a political subdivision of the state of Colorado and is subject to the Local Government Budget Law, C.R.S § 29-1-101, et seq. Platte River is not subject to Colorado’s Taxpayer’s Bill of Rights because it operates as an enterprise. Colorado law and Platte River financial policy require an annual budget that is balanced, meaning it must have sufficient projected revenues and available resources to equal anticipated expenditures. Throughout the budget development process, Platte River monitors anticipated revenues and expenditures to produce a balanced budget.

The statutory deadline for Platte River to submit its annual budget to its board of directors is Oct. 15 of each year. By that date, Platte River publishes a notice in newspapers of general circulation stating that the annual budget is available for public inspection and providing the date and time for the public hearing. The budget document can be found on Platte River’s website at prpa.org/financial-information and at Platte River’s headquarters at 2000 East Horsetooth Road, Fort Collins, Colorado.

The budget was developed to align with the strategic initiatives and comply with the financial framework described in the financial governance section. Platte River follows an adaptive strategy to effectively maintain system reliability, demonstrate environmental responsibility and regulatory compliance, as well as manage risk. The summary below explains how Platte River develops, reviews and approves the budget.

Owner communities load forecast

Platte River develops a long-range load forecast using an econometric model that incorporates independent variables including population, distributed solar, EVs usage and weather. The forecast also includes a trend for demand and energy changes anticipated from energy efficiency programs. Budgeted monthly demand and energy load projections are based on a 10-year official load forecast.

Production cost model

The major revenue and expense categories (sales for resale, purchased power and fuel) reflect results from an hourly production cost simulation model. Generation by resource reflects assumptions for resource availability and performance, fuel and transportation contract costs, PPA terms and market prices for sales for resale, supplemental purchased power and natural gas.

Personnel budget

The salaries budget follows the board policy on employee total compensation. Platte River typically includes a market adjustment to regular wages based on data from a variety of published sources, both regional general industry and from other utilities. Other known increases, where applicable, are also included in the budget. New positions are requested by
department managers who submit a position description and justification. The senior and director leadership teams review the requests and approve positions for the upcoming year based on the greatest need and value to Platte River. As positions become vacant, they are evaluated to determine if replacement is required or if the position can be allocated to another area. The board of directors approves incremental headcount through the budget process. Individual departments budget overtime and capital labor as a component of total salaries. The remaining operating salaries are allocated to the functional accounts based on estimates informed by recent historical data and anticipated impacts of new and changing roles and responsibilities. Medical and dental expenses are based on a mid-year projection provided by third-party consultants using historical claims and industry cost projections. All projected benefit costs are applied to the budgeted labor charges.

**Departmental budgets**

Each department must submit a budget on an account-by-account basis along with justifications, explanations and statistical information supporting the budget. Department managers develop internal goals and work plans and align their activities with Platte River’s strategic initiatives. Through internal work sessions, directors and senior leadership review and approve department budgets.

**Craig units 1 and 2 budget**

The Yampa participation agreement provides for joint ownership of Craig units 1 and 2, of which Platte River owns 18%. Tri-State, as the operating agent for the Craig Generating Station, is responsible for the daily management, administration, operation and maintenance of Craig units 1 and 2 and related transmission facilities. All costs of operation and maintenance, other than fuel costs, are shared on a pro rata ownership basis. Participants must advance funds to the operating agent as required to make payments of operations and maintenance costs when due. The engineering and operating committee works closely with Tri-State staff to develop capital and operations and maintenance budgets to support future plant reliability through the remaining operating life of the units. Until a legally enforceable agreement and estimate for decommissioning exists, Platte River independently develops an accretion expense estimate following the Craig units 1 and 2 decommissioning accrual accounting policy discussed in the financial governance section. This expense is a non-budgeted item but is included in change in net position for rate recovery purposes. Platte River will appropriate costs for decommissioning in future budgets based on cashflows, similar to an asset retirement obligation.

**Joint transmission**

Platte River’s share of joint ownership projects include costs for the Ault-Fort St. Vrain, Craig-Bonanza, Hayden-Blue River and Craig-Ault transmission lines, as well as Craig units 1 and 2 transmission costs. The joint ownership project budgets are developed by the operating agents and approved by the participants through the engineering and operating committees.
Billable projects

Platte River performs services on behalf of the owner communities. The services are structured under intergovernmental agreements and are billed directly to each owner community. Examples of services provided include customer information systems, distribution, SCADA, substation security, engineering and other technical support services and fiber management.

Capital budget

Platte River’s capital projects are based on a five- to 10-year planning horizon. With each budget cycle, projects are submitted with a description and justification. Projects are planned based on resource availability and are categorized, ranked, prioritized and strategic projects are identified. A long-term capital forecast is also prepared, reviewed and updated three times per year. The long-term capital forecast is used as a significant input into long-range financial planning to determine rates, projected cash flows and the timing of planned debt financings.

Budget contingency

The budget contingency can be used to meet expenditures not foreseen when the budget was prepared. Events that may require contingency funds include unplanned generation or transmission outages, significant increases in power market or natural gas prices, unplanned expenses to maintain power supply to the owner communities or the adoption of an accounting policy that alters expenditures. Contingency may also be used for existing capital projects that require expenditures above those budgeted due to scheduling changes, payment timing differences, changes in work scope, price fluctuations or new projects best started before the next budget year. A contingency transfer is not unusual for capital projects. Before transferring contingency to an expense category, staff must notify the board and present a proposed resolution. Before 2018, the budgeted contingency appropriation was a fixed amount. From 2019 to 2022, the amount was approximately 10% of the operating expenses and capital additions to align with fluctuations in the budget. Beginning in 2023, the contingency appropriation amount increased to approximately 20% of operating expenses and capital additions to help Platte River manage increased uncertainty in future budgets related to the resource transition plan and organized energy market activities.

(1) Staff plans to request a contingency transfer for debt service expenditures at the December 2023 board of directors meeting.
Management review

Staff prepares and analyzes financial statements, budget summary, budget detail, division and department budget reports for management review. Finance staff meet with the managers and the general manager/CEO to discuss the budget and confirm expenditures for the budget year are consistent with goals, objectives, strategic initiatives, rate projections and SFP metrics. These meetings may result in revisions, deletions, reductions or additions of budget items. Staff revises the budget accordingly and distributes revised reports to management for further review.

Budget document

The strategic budget document is a comprehensive document used by Platte River’s management as a planning tool and a means of communicating to the board of directors and the public. The budget document complies with the Local Government Budget Law of Colorado and is submitted to the state no later than 30 days after the start of the fiscal year of the adopted budget. The budget document must show all proposed expenditures as well as all sources of anticipated income; estimated beginning and ending fund balances; the corresponding actual figures for the prior fiscal year and estimated figures projected through the end of the current fiscal year; a written budget message; and explanatory schedules or statements. Certain budget amounts for the current fiscal year may be reclassified for consistency with the upcoming budget year presentation. These reclassifications have no impact on budgeted amounts and results.

Board review and adoption

Staff circulates the proposed budget to the board of directors in September and conducts a budget work session at the September board meeting. Legal notices are published in the owner communities’ newspapers stating the budget has been delivered to the board of directors; it is available for public inspection; the date and time of a public hearing which is scheduled at the October board meeting; and that the adoption of the proposed budget will be considered at the December board meeting. The board of directors reviews revisions to the budget made during the board of directors work session or other revisions arising from unanticipated changes at the October board meeting. Staff makes any necessary final adjustments to the proposed budget before board adoption which, for the 2024 Strategic Budget, is on Dec. 7, 2023.

Revisions between the proposed and adopted budget typically include those based on a revised production cost model run and refinements to operations and maintenance expenses and capital projects. Revisions can include changes to sales for resale market assumptions, fuel costs, ancillary service and wheeling rates, personnel costs, other various departmental expenses and any other change necessary for an accurate and complete budget for board adoption. The following table summarizes the changes between the proposed budget and the adopted budget.

## Budget amendments

If total revenues or total expenditures deviate from an adopted budget, after considering any resolution for contingency use, a budget amendment may be necessary. Under Colorado law, budget amendments must follow the same annual budget process requiring board meeting notice, public hearing and board adoption.
Distinguished Budget Presentation Award

The Government Finance Officers Association of the United States and Canada (GFOA) presented a Distinguished Budget Presentation Award to Platte River Power Authority for its 2023 Strategic Budget for the fiscal year beginning Jan. 1, 2023. In order to receive this award, a governmental unit must publish a budget document that meets program criteria as a policy document, as an operations guide, as a financial plan and as a communications device. This is the fourth consecutive year Platte River has earned this award.

The award is valid for a period of one year only. We believe our current budget continues to conform to program requirements, and we are submitting it to GFOA to determine its eligibility for another award.

Develop preliminary capital budget and initial operating budget

Work session with board

Review and analysis of budget by staff
FINANCIAL GOVERNANCE

The Local Government Budget Law of Colorado, in addition to the policies listed below, provides the framework for Platte River’s financial activities and budget development.

Fiscal resolution

The resolution is adopted as a requirement of the Organic Contract that governs the financial transactions of Platte River.

Strategic financial plan

In support of Platte River’s foundational pillars of providing reliable, environmentally responsible and financially sustainable energy and services, and Platte River’s mission, vision and values and strategic initiatives, the SFP provides direction to preserve long-term financial sustainability and manage financial risk. The objectives of the SFP are as follows:

- Generate adequate earnings margins and cash flows
- Maintain sufficient liquidity for operational stability
- Maintain access to low-cost capital
- Provide wholesale rate stability

Platte River is also subject to the following financial and rate requirements:

- General powers of Platte River, as stated by Colorado Revised Statute 29-1-204(3)(j), include the right to fix, maintain, and revise fees, rates, and charges for functions, services, or facilities provided. Platte River’s Board of Directors have the exclusive authority to establish electric rates.
- Power Supply Agreements with the owner communities require the board to review rates at least once each calendar year. The Power Supply Agreements also require rates to be sufficient to cover all operating and maintenance expenses, purchased power costs, bond service expenses, and to provide reasonable reserves and adequate earnings margins so Platte River may obtain favorable debt financing.
- The General Power Bond Resolution requires that rates be sufficient to generate net revenues that cover bond service expense at a minimum 1.10 times. Platte River must review rates and charges as necessary, no less than once each calendar year.

To meet these objectives and requirements, staff established financial metrics and rate stability strategies. The financial metrics take into consideration rating agency guidelines, targeting an "AA" category credit rating. The rate stability strategies include fiscal responsibility and rate smoothing.

Additionally, to manage financial assets and risk, staff will continue to implement and maintain prudent business practices in managing reserves and budgeting, complying with financial policies and procedures and maintaining the enterprise risk management program.
Staff analyzes financial results and projections relative to the financial metrics throughout the year. Staff must formally review the SFP with the board at least every five years.

**Financial metrics**

The SFP financial metrics support Platte River’s financial obligations including those established by the Colorado Revised Statutes, Power Supply Agreements, and General Power Bond Resolution and preserve long-term financial sustainability (cash flow, earnings, leverage, liquidity). The financial metrics maintain adequate reserves and provide balance between financing capital investments with cash and debt.

Strong financial metrics gives Platte River flexibility to implement necessary rate changes and to smooth rates over longer periods of time to minimize short-term rate impacts. Multi-year performance is considered during the evaluation of rate action and decision making. Platte River may not achieve financial metric projections in all years if staff considers the deficiency temporary.

The financial metrics described below were established based on guidelines provided for an “AA” category credit rating by Moody’s Investor’s Services, Fitch Ratings and Platte River’s financial objectives. Platte River’s financial advisor, PFM Financial Advisors LLC, also reviewed the SFP.

- **Cash flow metric:** Generate minimum 1.50 times fixed obligation charge coverage ratio
- **Earnings metric:** Generate minimum change in net position equal to 3% of annual operating expenses
- **Leverage metric:** Target adjusted debt ratio less than 50%
- **Liquidity metric:** Target minimum 200 days adjusted liquidity on hand

Included within the liquidity metric is the rate stabilization fund, established and maintained as allowed by the General Power Bond Resolution. The purpose of the rate stabilization fund is to reduce or eliminate the rate impact from an unforeseen event that affects Platte River’s ability to meet the minimum legal bond service coverage ratio requirement, but not to smooth the rate impacts of continued typical business operations. Platte River has never withdrawn funds from the account to meet bond service coverage. The current rate stabilization account is a statement of net position item of $20 million. Risk analysis is performed annually to determine the appropriate level to maintain in the account.

**Rate stability strategies**

Competitive wholesale rates give the owner communities an economic advantage for their residential, commercial and industrial customers. Platte River strives to maintain services and rates offered at competitive prices compared to similar services and products provided by other wholesale electric utilities in the region. Platte River has implemented the following rate strategies to help reduce long-term rate pressure and give the owner communities greater rate predictability.
Fiscal responsibility

Revenue generation

When financially advantageous, operationally feasible and reliable, Platte River sells generation surplus to owner community needs to other regional utilities on a short- or long-term basis. Margin from these sales reduce Platte River’s revenue requirement and benefits the owner communities through lower rates. Staff proactively seeks sales opportunities.

Expense management

Platte River prioritizes preventive and predictive maintenance strategies and proactive capital investments to provide long-term system benefits and efficiencies. Platte River will continue to invest in its existing power generation and transmission assets to maintain operational efficiency and to proactively address federal and state regulatory requirements. Platte River plans to expand its investment in noncarbon resources, such as wind and solar, distributed energy resources and other generating capacity as needed and retire coal-fired generation. Targeting an “AA” category credit rating through the financial metrics provides access to low-cost capital to support these investments. Platte River is committed to managing costs through its budget and long-term financial planning processes.

Rate smoothing

The board establishes tariffs and charges based on projected cost of service with adequate margin to achieve SFP financial metrics. Rate smoothing is accomplished through accounting policies and multi-year analysis to develop a long-term rate path with greater predictability.

Accounting policies - revenue and expense smoothing

As a board-regulated entity, Platte River is subject to the provisions of Governmental Accounting Standards Board 62 Codification of Accounting and Financial Reporting Guidance Contained in Pre-November 30, 1989 FASB and AICPA Pronouncements, Regulated Operations, paragraphs 476–500, which requires the effects of the rate making process to be recorded in the financial statements. Accordingly, certain revenues and expenses normally reflected in the statements of revenues, expenses and changes in net position as incurred are recognized when they are included in wholesale rates. Platte River adopts accounting policies that help stabilize rates.

Multi-year rate analysis

The board prefers to use a multi-year rate smoothing strategy, as deemed appropriate, to avoid greater single-year rate impacts or to accomplish specified objectives. Platte River will use this mechanism to stabilize rates and increase financial flexibility.

Integrated resource plan

Critical to the budgeting and rate projection process, an IRP establishes a short-term action plan and long-term resource acquisition trajectory for meeting forecasted electric load. Plans are modeled using a combination of supply-side generation resources and DER. Platte River’s IRP uses sophisticated modeling of Platte River’s unique resources, available technologies
and specific constraints, all studied by industry experts using best practices to develop supply portfolio options covering a 20-year planning period. The resource portfolio includes capital, operational, fuel and environmental costs. Community engagement is a significant part of the IRP development process, and Platte River engages with the owner communities on multiple levels to gain public input from as many retail customers as possible on the proposed long-term supply portfolios.

Decisions to invest in and maintain generating resources are significant and complex, with long-range financial and environmental implications that vary widely depending on the selected resource portfolio mix. The IRP results can significantly affect rate requirements as selected resources are factored into rate projections. Platte River updates the assumptions to achieve the selected path annually and incorporates them into financial and rate projections. Platte River must complete an IRP every five years, with the most recent being submitted in 2020 and covering the planning period from 2020 to 2040. As discussed in the strategic initiatives section, Platte River is developing a new IRP for 2024, one year early, which will cover the planning period from 2024 to 2043. Additional information about the current IRP is available on Platte River’s website at prpa.org/irp and additional information about the upcoming IRP is available at prpa.org/2024irp.

**Financial projections and cost of service**

Platte River’s financial model is designed to coincide with resource planning models and the IRP. While the planning horizon typically extends 10 years, functionality exists to evaluate scenarios out to 25 years. Key metrics typically identified and reported by the financial model include average rate projections (including annual rate increases) and the SFP metrics. Platte River uses the financial model to obtain forward-looking insight into the impact of IRP portfolios and the possible need to adjust long-term financial plans, including debt financing and rate adjustments, to meet SFP objectives.

The cost of service model determines specific charges outlined in the tariff schedules for the upcoming year’s budget. It incorporates budgeted expenses by FERC functional area and determines which specific charges should be used for cost recovery of each expense. The cost of service model produces unbundled charges that are transparent and aligned with underlying cost structures, leading to system benefits.

**Power supply agreements**

The power supply agreements define the terms and conditions for Platte River’s sale of wholesale electricity to the owner communities. Currently all four power supply agreements run through 2060.

**General Power Bond Resolution**

The General Power Bond Resolution allows Platte River to issue and sell bonds for a specific purpose and establishes the rights and responsibilities of each party in a bond contract (the issuer and the bondholder). The bonds represent money loaned and entitle the holder to interest payments and the return of principal.
Bond service coverage

Bond service coverage is a measure of Platte River’s ability to generate cash to pay bondholders and is a key indicator of financial strength. Credit rating agencies review bond service coverage when assessing Platte River’s credit quality. Under the General Power Bond Resolution, Platte River must charge wholesale electric energy rates to the owner communities that are reasonably expected to yield net revenues for the forthcoming 12-month period that are at least equal to 1.10 times total power bond service requirements.

Use of restricted and unrestricted resources

The use of restricted and unrestricted resources is based on the intended purposes as indicated in the bond resolutions.

Investments

Platte River’s investment policy provides a framework for managing its investments. Platte River must invest and manage assets as a prudent investor would, by considering the purposes, cash requirements and terms of the various funds. In satisfying this standard, the chief financial officer must exercise reasonable care, skill and caution. Investment and management decisions will be evaluated not in isolation but in the context of the portfolio as a whole and as a part of an overall investment strategy having risk and return objectives reasonably suited to Platte River. The primary objectives of investment activities are safety, liquidity and yield. Platte River invests only in obligations of the United States government and its agencies and other investments permitted under Colorado law.

Enterprise risk management

Platte River is committed to enterprise risk management, the process to identify potential events that may affect its ability to meet strategic objectives and manage identified risks appropriately. The risk oversight committee, consisting of the general manager/CEO and the senior leadership team, monitors the risk environment and provides direction for the activities to eliminate, mitigate or transfer, to an acceptable level, the risks that may adversely affect Platte River’s ability to achieve its goals. Additionally, the risk oversight committee supports organization-wide efforts to identify, monitor, evaluate and report risks and risk mitigation strategies. Platte River has also established an energy risk management framework, as a subset of enterprise risk management, to identify, measure, monitor, report and mitigate energy-related risks. The enterprise risk management program is continually evolving to incorporate best industry practices.

Platte River maintains several different types of insurance including auto liability, commercial crime, cyber liability, directors and officer’s liability, fiduciary liability, excess liability, medical professional, property, employee health and workers’ compensation. Insurance coverages and limits are commensurate with operating the electric system and Platte River’s contractual requirements.
**Basis of accounting**

Platte River accounts for its financial operations as a proprietary fund and uses the modified accrual basis of accounting for budgetary reporting purposes. Under the modified accrual basis of accounting, certain non-cash items are excluded from budget appropriation, including but not limited to depreciation expense for fixed assets, amortization for asset retirement obligations, accretion expense for Craig units decommissioning costs, accrued compensated absences, amortization of bond financing costs and unrealized gains or losses. Debt principal is included in the budget under the modified accrual basis of accounting. For financial statement reporting purposes, Platte River uses the full accrual basis of accounting conforming to accounting principles generally accepted in the United States of America. Platte River maintains its accounts according to FERC’s Uniform System of Accounts.

As a board-regulated entity, Platte River is subject to GASB Statement No. 62, Codification of Accounting and Financial Reporting Guidance Contained in Pre-November 30, 1989 FASB and AICPA Pronouncements, Regulated Operations, paragraphs 476–500, which requires the effects of the rate making process to be recorded in the financial statements. Accordingly, certain expenses and revenues normally reflected in the statements of revenues, expenses and changes in net position as incurred are recognized when they are included in Platte River’s wholesale rates. These policies are used as rate setting strategies. Below is a list of Platte River Board-approved accounting policies for specific activities following this standard:

- Additional pension funding expense recognition
- Pension contribution expense recognition
- Debt issuance expense recognition
- Maintenance outage expense accrual
- Change in depreciation method
- Windy Gap Firming Project
- Craig units 1 and 2 decommissioning accrual
- Deferred revenue and expense

**Operating revenues and expenses**

Operating revenues and expenses consist of those revenues and costs directly related to the generation, purchase and transmission of electricity. Operating revenues are billed and recorded at the end of each month for all electricity delivered. Revenues and expenses related to financing, investing and other activities are considered to be nonoperating.

**Capital**

Capital additions include expenditures of $5,000 or more for property, equipment or construction projects with an estimated useful life greater than two years. Expenditures less than $5,000 are reflected in the operations and maintenance expense budget. Where applicable, expenditures also include payments to vendors made under GASB statements 87 and 96 before the underlying asset is placed in service. The Craig units 1 and 2 capital budget was prepared by the operating agent, Tri-State, and has been approved by the engineering
and operating committee of which Platte River is a member. Depreciation is recorded using the straight-line method over the estimated useful lives of the various assets of plant in service. For budgetary reporting, capital additions also include appropriations for asset retirement obligations, discussed further in this section.

Platte River management emphasizes project management, specifically reviewing resource availability, as well as improving project planning and execution. This process will continue to evolve, striving toward operational excellence.

Capital projects can be delayed for various reasons. Unexpended amounts may be due to construction delays, change in scope or payment timing differences and will be determined after the Dec. 31 year-end closing. Budget law allows Platte River to carry over into the next year any unexpended balance of funds appropriated for the previous year expenditures. The amounts required in the next year to complete the previous year projects will then be transferred to the appropriate budget categories in the next year. This is termed the carryover process and is preferred versus re-budgeting the funds. The capital additions will be funded either from current operations or proceeds from debt financings.

As unplanned projects or additional fund requests for existing projects come up throughout the year, project managers follow the internal out-of-budget or over budget request process to submit the request for consideration. Each request for a new project or additional funding for an existing project is described and justified and other impacts are evaluated. The general manager/CEO then reviews the request on merit. If the request is approved, overall project schedules may change to accommodate the new or revised project. Given variability and uncertainty with projects, funding is tracked closely, and the carryover process is implemented if a project cannot be completed in the given year. If additional funds are required for all capital additions at the enterprise-wide level, staff will request a contingency transfer to move funds into the capital budget.

**Asset retirement obligations**

Asset retirement obligations originate when a legally enforceable liability associated with the retirement of a tangible capital asset exists and is reasonably estimable. Following Platte River’s adoption of GASB Statement No. 83, Certain Asset Retirement Obligations, effective for the period ending Dec. 31, 2019, asset retirement obligations are appropriated for budgetary purposes on a cash basis method aligned with when liabilities are anticipated to be settled as retirement activities occur. For financial reporting purposes, the expense of the liabilities is recognized in the period during which the underlying capital asset is being used. This is achieved by recording a deferred outflow of resources equal to the liability, which is subsequently recognized as amortization expense during the pre-retirement period. The liability and associated deferred outflow of resources are evaluated annually for an inflationary adjustment and changes in estimated costs and adjusted when necessary. Before Platte River adopted this statement, identified asset retirement obligations were appropriated through operations and maintenance expense with no differences in budgetary and financial reporting.
The following table summarizes anticipated asset retirement obligations for financial reporting purposes at the end of 2023, including the periods in which amortization is expected to be recognized. Budget appropriation occurs as actual retirement activities commence and are reflected as capital additions.

</table>
LAP  
Loveland Area Projects – division of the Western Area Power Administration.

MBtu  
One million Btu. A Btu is a British thermal unit and is the standard unit for measuring quantity of heat energy and represents the amount of heat energy necessary to raise the temperature of one pound of water one degree Fahrenheit.

MW  
Megawatt; one thousand kilowatts.

MWh  
One megawatt of power delivered steadily for one hour.

MW-Mo  
The maximum MW reached or made available during a calendar month used for billing demand or capacity.

NERC  
North American Electric Reliability Corporation.

Net position  
Difference between total assets plus deferred outflows of resources and total liabilities plus deferred inflows of resources.

Net revenue  
Total revenues less operation and maintenance expenses during a period.

O&M  
Operations and maintenance.

Organized energy market  
A system in which participants submit offers to buy or sell wholesale energy as a commodity. Utilizing pricing signals to leverage the lowest-cost resources to serve load, market operators efficiently dispatch resources across participating utilities, reducing fuel and maintenance costs while increasing reliability and integration of renewable resources.

OSHA  
Occupational Safety and Health Administration.

Owner communities  
Town of Estes Park, City of Fort Collins, City of Longmont and City of Loveland are the owner communities of Platte River.

pH  
Potential hydrogen, a scale used to specify the acidity or basicity of a solution.

PPA  
Power purchase agreement.

Projected  
Estimate of revenues and expenditures based on past trends, current economic conditions and future financial forecasts.
PSCo

Public Service Company of Colorado.

Rate stabilization fund

An account provided for by Platte River’s General Power Bond Resolution and funded or used in accordance with Platte River’s SFP.

RDP

Resource Diversification Policy.

REC

Renewable Energy Certificate.

Restricted assets

Cash and investment accounts restricted to use by bond covenants or laws and regulations.

RTO West

Regional Transmission Organization West, an expansion of SPP’s existing RTO structure in the Western Interconnection. RTO West is a centralized, financially binding day ahead market as well as regional transmission planning mechanism. Participation in RTO West would yield additional benefits beyond those of WEIS in that reliability is further improved and regional transmission planning reduces congestion which benefits the overall footprint.

Sales for resale – long-term

Sales of energy set forth by a contract with duration greater than one year.

Sales for resale – short-term

Sales of electric energy for a period of one year or less.

SCADA

Supervisory control and data acquisition.

SFP

Strategic financial plan.

SPP

Southwest Power Pool.

Tri-State

Tri-State Generation and Transmission Association, Inc.

VPP

Virtual power plant, which is a portfolio of flexible DER capable of being operated, on a schedule basis or in near-real-time, to manage the electric supply-demand balance.

WAPA

Western Area Power Administration.

WECC

Western Electricity Coordinating Council.

WEIS

Western Energy Imbalance Service, which is a real-time, five-minute organized energy market operated by SPP.
Wheeling  Use of transmission facilities by other utilities.
RESOLUTION NO. 17-23

Background

A. Platte River Power Authority (Platte River) is a municipally owned utility and political subdivision of the state of Colorado, subject to the Local Government Budget Law of Colorado, Colorado Revised Statutes (C.R.S.) § 29-1-101, et seq.

B. Platte River’s staff has prepared and submitted to the board of directors (board) a proposed Strategic Budget for Platte River for the fiscal year that begins on Jan. 1, 2024, and ends on Dec. 31, 2024 (2024 Strategic Budget) and issued public notices (on Sept. 27, 2023) that the 2024 Strategic Budget was available for public inspection as required by C.R.S. § 29-1-106.

C. The board received the proposed 2024 Strategic Budget and held a public hearing on Oct. 26, 2023 to consider any public comments on or objections to the budget as required by C.R.S. § 29-1-108.

D. The board has reviewed the proposed 2024 Strategic Budget and determined that the anticipated revenues, prior period reserves and financing are sufficient to meet Platte River’s costs of operation and maintenance, debt expense, capital additions, and contingencies and will provide an adequate earnings margin, all in accordance with the power supply agreements with the owner communities, Platte River’s General Power Bond Resolution (Resolution No. 5-87) and the Strategic Financial Plan (Resolution No. 03-18).

Resolution

The board of directors of Platte River Power Authority therefore resolves that:

1. The 2024 Strategic Budget, in the form submitted, is hereby approved and adopted.

2. This resolution constitutes the “Platte River Power Authority 2024 Strategic Budget and Appropriation Resolution.” This resolution, together with the 2024 Strategic Budget, represents a complete financial plan and makes total expenditure appropriations for the fiscal year 2024 of $356,601,453.
3. The board hereby budgets and appropriates, from funds available to Platte River and not otherwise subject to restricted purposes under the General Power Bond Resolution, the unexpended balance of funds authorized for expenditure by the Platte River Power Authority 2023 Strategic Budget and Appropriation Resolution for the purposes specified in that resolution or in this resolution.

AS WITNESS, I have executed my name as Secretary and have affixed the corporate seal of the Platte River Power Authority this 7th day of December, 2023.

________________________________________
Secretary

Adopted:
Vote:
Memorandum

Date: 11/29/2023

To: Board of directors

From: Jason Frisbie, general manager and chief executive officer
      Melie Vincent, chief operating officer

Subject: Southwest Power Pool Regional Transmission Organization West update

Platte River staff will update the board on development of the Southwest Power Pool Regional Transmission Organization West (SPP RTO West). The update will cover market development activities, decisions and actions currently underway that are important to the long-term operation and success of Platte River in SPP RTO West. Staff will also review Platte River’s SPP RTO West implementation work plan for market go-live April 1, 2026.

This presentation is for informational purposes only and does not require board action.
Staff will update the board on the Rawhide transition plan at the December board meeting. A cross-functional team is developing a plan, guided by Resolution No. 08-20 (which the board passed in July 2020), that will comply with State of Colorado Just Transition Office requirements.

This presentation is for informational purposes only and does not require board action.
Memorandum

Date: 11/29/2023

To: Board of directors

From: Jason Frisbie, general manager and chief executive officer
      Raj Singam Setti, chief transition and integration officer

Subject: Resource Diversification Policy update

In December 2018, the board enacted the Platte River Resource Diversification Policy. Since that time, there have been considerable shifts, notably in the market prices within the renewable energy sector, supply chain interruptions and passage of the Inflation Reduction Act.

Our work on the 2024 Integrated Resource Plan has enhanced our understanding of reliability challenges. Staff will update the board on the diverse elements guiding our journey toward a noncarbon future and will cover our progress over the past year and provide a forecast of upcoming trends and developments.

This presentation is for informational purposes only and does not require board action.
Memorandum

Date: 11/29/2023

To: Board of directors

From: Jason Frisbie, general manager and chief executive officer
      Javier C. Camacho, director of public and external affairs, strategic communications and social marketing

Subject: Preview of the 2024 Colorado legislative session

This presentation will preview the 2024 Colorado legislative session, including the current composition of the Colorado General Assembly, anticipated energy- and environment-related bills and overall legislative priorities for the 2024 session. The presentation will also provide an overview of Platte River’s state-level legislative priorities and strategy to prepare for the 2024 session.

This presentation is informational purposes only and does not require board action.
Memorandum

Date: 11/29/2023

To: Board of directors

From: Jason Frisbie, general manager and chief executive officer
      Melie Vincent, chief operating officer
      Heather Banks, senior manager, fuels and water

Subject: Windy Gap request for proposal recap

Platte River’s water resources policy directs Platte River to manage its water rights and resources as an asset of the organization. The board of directors approved Platte River’s initial water resources reference document in December 2016 and the most recent edition in May 2023. One component of Platte River’s water resources policy authorizes the sale of up to 60 Windy Gap units. To date, Platte River has sold 50 of these units, with the most recent sale completed in December 2020.

Earlier this year, Platte River decided to offer to sell up to five unconfirmed Windy Gap units (units without associated storage capacity in Chimney Hollow Reservoir). To determine the current fair market value of unconfirmed Windy Gap units, Platte River issued a request for proposals on June 15, 2023. Bidders submitted proposals in August; sales transactions with the successful bidders are currently in progress.

Platte River staff will provide a high-level overview of the proposals and the status of the forthcoming sales.

This presentation is for informational purposes only and does not require board action.
2024 Integrated Resource Plan (IRP) community engagement strategy update

The communications, marketing and external affairs (CMEA) team worked closely with the transition and integration team to develop a robust and highly localized community engagement strategy for the 2024 IRP. While the community engagement strategy is still in motion, the teams have been actively involved between June 1 and late November 2023. The strategy involved working in collaboration with the four owner communities’ distribution utilities’ communications and community relations staff. The owner communities’ staff recommended neighborhood groups, community and nonprofit organizations and customer accounts to engage and helped coordinate presentations for city councils and council-appointed boards. This allowed for a more targeted approach on engaging with stakeholders across Platte River’s service region, responding to questions and addressing concerns surrounding reliability, environmental responsibility and financial sustainability. To date, Platte River has made 19 community presentations outside of the June 1 and November 2 community engagement sessions. Following is an overview of these presentations.

Presentations per owner community:

- Estes Park: 2
- Fort Collins: 8
- Longmont: 5
- Loveland: 4
Presentations per community group type:

- Neighborhood group: 2
- Community organization: 6
- Nonprofit: 5
- Customer account: 1
- Council-appointed board: 3
- City/town council: 4

Based on logistics and recommendations made from each owner community, staff individualized some presentations for the attending group; other presentations allowed an opportunity to combine several groups. While the audiences were vast across Platte River’s service region with an array of backgrounds, there were general themes that surfaced. Those themes included discussions around behavioral changes and impacts to resource planning, impacts of climate change and extreme weather modeling, equity and affordability, the increasing trend of beneficial electrification and growth in demand and load, and clarity on what is a dispatchable resource. Each presentation provided the audience an opportunity to ask questions. The Platte River team continues to receive questions from a variety of platforms such as email, social media and in-person. To date, over 150 questions have been logged.

Second community engagement session recap

On Thursday, November 2 from 6:00 to 8:00 p.m., Platte River hosted its second community engagement session as part of the 2024 IRP process. This session was the second of three as we undergo the 2024 IRP process. This session was the result of successful cross-functional teamwork within the organization, including communications, marketing and external affairs, facilities and security, administrative services, portfolio strategy and integration, distributed energy resources and energy solutions.

- 48 people attended in person, with options to self-identify which community they were representing:
  - Estes Park: 3
  - Fort Collins: 29
  - Longmont: 5
  - Loveland: 7
  - Unidentified: 4
- 50 viewers via Zoom
- 22 questions were received (electronically and in-person) by the conclusion of the session.

The evening overall was broken into two main sections: a formal presentation by Platte River to update the community on resource planning and data from the studies, and secondly a question-and-answer period. Attendees were encouraged to ask questions either in person or online. The second part of the engagement session allowed Platte River to underscore content covered during the formal presentation.
and to share with the community work in progress as part of the IRP. All questions received will be answered and be available on Platte River’s IRP webpage.

The second engagement session took elements of the first session, allowing the attendees to submit questions in written form, but also provided a guided dialogue in response to questions and comments in real time. The second session also offered the community both Spanish and American Sign Language translation services, in addition to equipment for those in need of hearing assistance. Attendees were encouraged to explore the five studies published on the IRP webpage and review the updated FAQs, as well as send questions and comments to 2024IRP@prpa.org.

**Next steps**

The CMEA team will lead and actively coordinate follow-up presentations to the community groups Platte River presented to in 2023. Any community group that did not receive a presentation in 2023 is slated for early first quarter 2024. CMEA will work with the transition and integration team to develop an updated IRP presentation for this next phase of community engagement. Planning for the final community engagement session, slated for March 2024, will begin in early January. The CMEA team will also begin production of an updated IRP video – a refresh from the Resource Diversification Policy video produced in 2020 – that captures Platte River’s current work on resource planning. This video will debut during the third community engagement session.

Over the long term, the CMEA team will continue working with the regional communications task force across the four owner communities to develop and maintain messaging alignment and pursue larger community engagement opportunities beyond the IRP process.

In the short term, the CMEA team is coordinating responses to IRP questions received since June 1 and maintaining communications with stakeholders on the IRP distribution list.
Memorandum

Date: 11/29/2023

To: Board of directors

From: Jason Frisbie, general manager and chief executive officer
      Eddie Gutiérrez, chief strategy officer
      Libby Clark, director of human resources and safety

Subject: Benefits update

Each year, Platte River human resources evaluates the organization’s insurance plans (medical, dental, vision, life and accidental death and disability, long-term disability, etc.) and identifies protections to cap Platte River’s liability as well as ensures our plans remain competitive and sustainable for the future.

Platte River implemented many changes to our non-medical benefit offering including personal leave, bereavement leave and holiday pay at the beginning of 2023. Platte River introduced an industry-leading paid family leave program that complements the federal Family Medical Leave Act and provides a greater benefit than the Colorado Family and Medical Leave Insurance program. New voluntary medical benefit offerings with accident and critical illness coverage were also added for employees. These additions are at no cost to the organization but provide options for employees’ benefits packages. These enhancements made our total rewards program highly competitive in the market and support our strategic initiatives to retain and attract top talent at Platte River.

In 2023, human resources conducted a request for proposals, which resulted in a change to our third-party administrator for the 2024 plan year. This change brings a new and improved level of customer service and a larger service network for our plan participants’ care. We also continue to evaluate and implement benefit offerings to enhance our total rewards package.

The flexibility of our self-funded plan gives Platte River the advantage of evaluating our benefit offerings independently. This allows us to offer high-quality benefits at the most reasonable prices. Our partnership with our benefits consultant, Alliant Insurance Services, enabled us to market our plans and receive competitive bids from other providers, guaranteeing continuation of coverage at competitive rates. Our 2024 medical and dental budget will increase by approximately 20%, due primarily to increases in cost of care and employee growth.

We are committed to continuously evaluating our plans and services to align our actions with our strategic roadmap and ensure we provide competitive benefits for our employees while maintaining financial sustainability for the organization.
Legal, environmental and compliance report

October 2023
Overview of recent developments

Legal matters

Progress on the Southwest Power Pool’s western regional transmission organization

Platte River entered the Southwest Power Pool (SPP) Western Energy Imbalance Service market on March 31, 2023. Over the past year or so, Platte River has collaborated with other regional utilities, as well as SPP, to explore the potential for SPP to expand its current 14-state regional transmission organization into the Western Interconnection (RTO West), with an anticipated go-live date of April 2026. Platte River signed a commitment agreement to participate in RTO West on June 29, 2023. On Oct. 10, 2023, the Western Area Power Administration also signed commitment agreements to expand its SPP participation into RTO West, allowing RTO West to move forward as planned. The full report is on page 2 of this document.

Progress on the Southwest Power Pool’s western regional transmission organization

Background:
Platte River entered the Southwest Power Pool (SPP) Western Energy Imbalance Service market on March 31, 2023. Over the past year or so, Platte River has collaborated with other regional utilities, as well as SPP, to explore the potential for SPP to expand its current 14-state regional transmission organization into the Western Interconnection (RTO West).

RTO West will include day-ahead as well as real-time operational and tariff services. Potential participants include Basin Electric Cooperative, Colorado Springs Utilities, Deseret Generation and Transmission Cooperative, Municipal Energy Agency of Nebraska, Platte River Power Authority, Tri-State Generation and Transmission Association, and the Western Area Power Administration (WAPA) (encompassing three divisions—the Rocky Mountain Region, the Upper Great Plains Region, and the Colorado River Storage Project). The target “go-live” date for RTO West is April 2026.

To begin the RTO West expansion, SPP required prospective participants to make financial commitments. Platte River worked with the legal teams from SPP and the other participants to draft the template for a series of bilateral agreements (Commitment Agreements) to enable SPP to recover its development costs if RTO West does not go forward as planned. (If RTO West launches as planned, SPP will recover its development costs over time through its administrative fees.) Most participants, including Platte River, signed Commitment Agreements by June 30, 2023.

SPP’s current cost estimate for the RTO West expansion is approximately $40 million. Platte River’s estimated share is roughly $5 million. Under the Commitment Agreements, the obligation to reimburse SPP for its development costs arises only for participants that withdraw before the go-live date or if RTO West does not launch in the Western Interconnection.

Current Status:
On Oct. 10, 2023, WAPA signed Commitment Agreements to participate in RTO West, allowing RTO West to move forward as planned. Platte River and the other participants are working with SPP to further develop RTO West, including setting up committees and drafting tariff provisions to incorporate the new members. SPP plans to file the updated tariff provisions with the Federal Energy Regulatory Commission (FERC) in early- to mid-2024.
Environmental matters
There are no active environmental matters to report.

Compliance matters
There are no active compliance-related matters to report.
Monitoring—status unchanged

Legal matters

El Paso Electric Co. v. Federal Energy Regulatory Commission

Current Status:
On Aug. 2, 2023, the Fifth Circuit Court of Appeals (Fifth Circuit) found that the cost allocation scheme FERC approved for WestConnect might require FERC-jurisdictional utilities to subsidize non-jurisdictional utilities on regional transmission projects. Therefore, the Fifth Circuit overturned FERC’s orders. It is unclear how FERC-jurisdictional utilities will respond. Platte River will continue to monitor the proceedings at the Fifth Circuit and at FERC.

Proposed revisions to Colorado Air Quality Control Commission Regulation No. 3 for sources in disproportionately impacted communities

Current Status:
On Aug. 21, 2023, a coalition of non-governmental organizations, including GreenLatinos, 350 Colorado, and Earthworks, sued the Air Quality Control Commission (Air Commission) in Denver County District Court. The lawsuit alleges that the rules the Air Commission adopted on May 18 do not comply with Colorado’s Environmental Justice Act and are otherwise arbitrary and capricious. If the lawsuit succeeds, the likely outcome is a remand to the Air Commission for a new rulemaking. Platte River will monitor this lawsuit and update the board with any developments.

Save the Colorado v. Bureau of Reclamation (Glen Canyon Dam)

Current Status:
On June 1, 2023, Save the Colorado and other environmental groups (appellants) filed their opening brief at the Ninth Circuit Court of Appeals (Ninth Circuit). The defendants (now appellees), including the Bureau and the Colorado River Energy Distributors Association (of which Platte River is a member), filed their responding briefs on Aug. 2, 2023. Appellants filed their reply brief on Sept. 22, 2023. The parties must now wait for the Ninth Circuit to decide the case.

Environmental matters

EPA’s proposed new regulations for greenhouse gas emissions from power plants

Current Status:
The comment period on rules proposed by the U.S. Environmental Protection Agency (EPA) ended Aug. 8, 2023. EPA received more than one million comments on this proposed rule, showing the high
level of interest and controversy over relying on new technologies like hydrogen co-firing and carbon capture and sequestration. Because of the numerous comments, it may take EPA many months or even years to respond and issue final rules. Platte River will evaluate the effect of any final rule, once issued, on its current and any proposed new electric generating units.

**Groundwater and waste management**

*Current status:*

Platte River continues to monitor groundwater and has nearly completed lining and improvements at the monofil. There have been no new developments since our last report.

**Compliance matters**

There are no compliance-related matters in monitored status this month.
Recently concluded matters (last three months)

Legal matters

There are no recently concluded legal matters.

Environmental matters

There are no recently concluded environmental matters.

Compliance matters

There are no recently concluded compliance matters.
Resource diversification report

October 2023
Resource integration

Platte River has recently received proposals from six different wind developers in response to our recent request for proposals (RFP) to acquire 150 - 250 MW of additional nameplate wind capacity. Several of the wind developers submitted multiple proposals from unique project locations. We will develop a short list of preferred projects over the next few weeks. We are targeting this additional wind capacity to come online in 2027.

Our team is currently in active negotiations to secure 150 MW of nameplate solar capacity, with the aim to begin commercial operations in early 2026.

Black Hollow Sun Solar, LLC (BHS) has signed engineering, procurement, and construction (EPC) Limited Notice to Proceed agreements to procure long-lead items essential for construction. Additionally, BHS's EPC team is actively applying for the building and grading permits and has already secured approval for the stormwater permit as of November 8. Crews are schedule to mobilize and start civil work at the project site in the first quarter of 2024. The anticipated commercial operation date is in early 2025.

In the first quarter next year, staff plans to issue a new RFP for a utility-scale, grid-connected, four-hour lithium-ion battery project, targeting potential commercial operation by early 2027.

The table below summarizes Platte River’s latest resource expansion initiatives, tailored to align with our evolving power supply objectives.

(*) In-service year for new resources is based on first year such resource is available during the summer months.

Integrated resource planning 2024

The resource planning team dedicated most of last month to refine portfolios for the 2024 Integrated Resource Plan (IRP), participated in public engagements related to the 2024 IRP and finalized studies in support of the IRP. Key activities include:

- Finalized four portfolios out of the 25 developed and reviewed for the 2024 IRP.
  - Cost-Efficient Portfolio: Focused on achieving the lowest possible costs.
• Thermal-Free Portfolio: Excludes any new thermal energy resources.
• Social Carbon Cost-Aware Portfolio: Incorporates the implications of the social cost of carbon.
• Optimal Strategy Portfolio: Designed to offer the best overall reliability and sustainability.

- Continued participation in the 2024 IRP public engagement sessions, including a successful presentation and messaging at the second IRP listening session on November 2.
- Completed all external consulting studies, with the exception of the study on low or no-carbon technology screening.
- Initiated phase 2 of the dispatchable generation technology screening study.
- Worked with external vendors and companies to explore low- and no-carbon technologies, including meetings with Form Energy and Mitsubishi Aero.
- Collaborated with the portfolio strategy department to explore alternative fuel options for new resources.

**Data Science and Analytics**

In the field of analytics, our team actively engaged in the following key activities:

- Provided consistent support to our operations department by delivering daily updates for the Western Energy Imbalance Service demand-supply balance and locational marginal price data dashboards.
- Assisted our external IT consultant in overhauling our planning database and various internally developed planning dashboards. Our team has also been instrumental in enhancing plant information data pipelines and developing new dashboards to address evolving requirements.

**DER system integration**

Platte River and the four owner communities are working together to integrate distributed energy resources (DERs), whether owned by customers or the utility, into the electric system. This collaborative endeavor includes the DER Advisory Committee, DER Planning and Programs teams, and additional working groups of Platte River personnel and owner communities.

The table below illustrates our DER planning forecast of DER adoption and the projected enrolled and achievable potential for DERs that can be managed by the virtual power plant (VPP).
DER planning forecast (MW)

</tbody>
</table>

1. DER adoption forecast: Projected customer-driven uptake of solar, storage, and electrification based on costs, incentives, and customer evaluations of technology and fuel expenses.
2. VPP enrolled MW capacities represent the capacity of DERs projected to be enrolled in VPP management. Achievable MW capacities represents the capacity projected to be dispatchable after adjusting for customer usage limitations.

Work continues to develop distribution-scale storage projects, which could give Platte River and the owner communities as much as 25 MW of four-hour storage. Platte River staff continue to work with owner community staff to build project support, address inquiries they may have and gather their feedback on proposals. Platte River and owner community staff have met with each of the bidders to meet their teams and to discuss their approaches to project development and implementation.

Work on the DER gap assessment and roadmap continues. Platte River and Utilicast have shared two draft deliverables with the owner communities for review and discussion. The Enabling Technologies for Distributed Energy Resources Integration and Virtual Power Plant Operations report describes the utility information technology, operations technology and communications systems that support effective integration of DERs. The Target State, Gap Assessment and Roadmap document explores how Platte River and the owner communities could develop and integrate these enabling technologies over time. Owner community and Platte River staff are currently reviewing the documents and hope to complete this work in December to inform our collective and individual next steps.
Operating report

October 2023
Executive summary

October started with mild temperatures and brought snow near the end of the month which resulted in owner community demand being at budget. Owner community energy came in below budget, as most of the month was unusually mild. Year to date, demand is near budget and energy is below budget. The overall net variable cost to serve owner community load was above budget for the month, due to below budget surplus sales volume and above budget coal generation prices. Year to date, the net variable cost to serve owner community load is below budget.

Thermal resources

Rawhide Unit 1 had a forced outage due to a fire and a few curtailments, which resulted in equivalent availability factor coming in below budget. Net capacity factor was below budget, due to having been dispatched lower in the Southwest Power Pool Western Energy Imbalance Service (SPP WEIS). Year to date, Rawhide equivalent availability factor is below budget and net capacity factor is significantly below budget.

Craig Unit 1 experienced several curtailments throughout the month as well as two outages. The Oct. 13 outage was to replace stator cooling filters and the Oct. 20 outage was to complete maintenance and replace some equipment. Craig 2 experienced an outage on Oct. 21 and was offline until Oct. 31 for work on air heaters, balancing of a forced draft fan and repairs on a boiler feed pump turbine. In addition, the Craig units’ generation output was limited for about 3 and a half weeks due to transmission work on the system. The outages and curtailments resulted in equivalent availability factor being below budget for the month. The Craig units were also dispatched lower in WEIS which resulted in net capacity factor being below budget. Year to date, Craig equivalent availability factor and net capacity factor are significantly below budget.

Renewable resources

Wind generation was below budget for the month, due to mild weather in the region in addition to being curtailed through WEIS. Overall solar generation was below budget, with the Rawhide Prairie Solar project also experiencing WEIS curtailments. Net capacity factors for wind and solar were below budget for the month. Year to date, net capacity factor for wind is below budget and solar is near budget. The battery associated with the Rawhide Prairie Solar project was charged and discharged 30 times throughout the month, missing one day when the solar panels were covered in snow.
**Surplus sales**

Surplus sales volume was below budget for the month, as the result of baseload generation outages and curtailments as well as mild temperatures. Average surplus sales pricing was above budget, due to above budget bilateral sales pricing. Year to date, surplus sales volume is significantly below budget and average surplus sales pricing is significantly above budget.

**Purchased power**

Overall purchased power volume was significantly above budget, due to a considerable amount of energy purchased through WEIS. WEIS average purchased power pricing was significantly above budget, but below generation costs. Bilateral purchased power volume and pricing were significantly above budget for the month due to higher pricing during periods when baseload generation was curtailed and offline. Year to date, both purchased power volume and purchased power pricing are significantly above budget.

**Total resources**

Total blended resource costs were above budget for the month, primarily due to significantly above budget coal costs at Craig and purchased power costs. Year to date, total blended resource costs are above budget.

Net variable cost to serve owner community load

*The net variable operating cost to serve owner community load is equal to the sum of fuel, renewable purchases, energy purchases less surplus energy sales. The net variable cost is divided by total owner community load to determine average net variable cost to serve owner community load.
Events of significance

- On Oct. 23, the Craig to Ault line had a planned transmission outage which concluded on Oct. 25 at 4:00 p.m., well ahead of the anticipated Oct. 27 completion date.

- On Oct. 18, the Western Area Power Administration (WAPA) completed the rebuild project of the Pole Hill – Estes Park 115 kV line and the Lyons – Estes Park 115 kV line.

- On Oct. 20, the Estes Park – Wagon Wheel 115 kV line section tripped and reclosed. It was later reported that the cause of the trip was two individuals having climbed a tower and gotten into the line.

- On Oct. 4, transmission power system operators (PSOs) completed the annual test of operating from the disaster recovery center for a minimum of two hours, as required by the North American Electric Reliability Corporation (NERC) emergency operations standards.

- Starting Oct. 9, the Craig units had a planned generation limitation which restricted Platte River’s Craig generation to a maximum of 133 MW. The limitation was for planned work on transformer T1. Starting Oct. 31, planned work on transformer T2 began which extended the Craig generation maximum of 133 MW. Platte River’s normal share of Craig generation is 151 MW.

- On Oct. 3, Xcel Natural Gas scheduled maintenance on their system resulting in a natural gas interruption which impacted Platte River. Gas transportation was unavailable during the planned maintenance period which involved a generator upgrade in preparation for cold weather. All Platte River combustion turbines were, therefore, unavailable for approximately 10 hours during the natural gas interruption.

- On Oct. 10, Rawhide Operations tripped Rawhide Unit 1 after a fire was discovered in the coal piping for coal mill 102. The buildings were evacuated until the emergency response team had the fire extinguished. Rawhide Unit 1 started up later that same afternoon. The investigation into the cause of the fire is ongoing. Coal mill 102 remains out of service until new coal piping parts can be purchased.

- On Oct. 29, line galloping caused the Estes Park – Pole Hill 115 kV line and the Estes Park – Lyons 115 kV line to trip and could not reclose which resulted in a blackout for the Town of Estes Park. Thanks to the coordinated efforts between Platte River, Estes Park Utilities, WAPA and Tri-State staff, all load was restored by 12:06 p.m. Line galloping happens when weather conditions are such that ice forms on the conductors and the wind shapes the ice in a manner which causes the conductors to start swaying up and down and side to side in the wind. The phases then hit each other which causes the lines to trip. Platte River and WAPA personnel are coordinating efforts to perform mitigating actions to prevent the galloping from occurring in the future. Due to WAPA’s required federal procurement process, an immediate long-term solution may be difficult. However, WAPA staff are pursuing emergency funding options that could result in a faster response. In the interim, Platte River and WAPA personnel are working to develop a plan to re-energize the Town of Estes Park in a quicker manner, should this happen again in the interim.
**Peak day**

**Peak day obligation**

Peak demand for the month was 453 megawatts which occurred on Oct. 1, 2023, at hour ending 18:00 and was at budget. Platte River’s obligation at the time of the peak totaled 521 megawatts. Demand response was not called upon at the time of peak.

*Some off-system wind renewable energy credits and associated energy have been sold to another utility and, therefore, cannot be claimed as a renewable resource by Platte River or its owner communities.*

Financial report

October 2023
**Financial highlights year to date**

Platte River reported favorable results year to date. Change in net position of $34.6 million was favorable by $14.6 million compared to budget due to below-budget operating expenses and above-budget unrealized gains and interest income on investments, partially offset by below-budget revenues.

<table>

**Change in net position estimate**

Based on current assumptions, the expected change in net position for 2023 is projected to be approximately $37.4 million before deferral. The table below compares this amount to the annual budget and calculates the amount of deferred revenues under this scenario. This amount will vary as actual outcomes will differ from assumptions.

<table>
<thead>
<tr>
<th>Change in net position: annual budget</th>
<th>Change in net position before deferral: expected</th>
<th>Variance ($)</th>
<th>Variance (%)</th>
<th>Projected deferred revenue (1)</th>

</thead>
<tbody>
<tr>
<td>$ 22.4</td>
<td>$ 37.4</td>
<td>$ 15.0</td>
<td>67%</td>
<td>$ 29.4</td>
<td>$ 8.0</td>
</tr>
</tbody>
</table>

Amounts above are in millions

(1) The projected deferred revenue is based on maintaining the SFP metrics.

The expected projection includes overall lower operating expenses and higher nonoperating revenues partially offset by lower operating revenues.

**Operating revenues**

- **Sales to the owner communities and sales for resale** are anticipated to end the year below budget. Mild weather is contributing to lower sales to the owner communities and lower sales for resale. Resource availability and market conditions and are also contributing to the lower sales for resale.

**Operating expenses**

- **Purchased power** is anticipated to be above budget at the end of the year as purchases replace baseload generation.
- **Fuel** is anticipated to be below budget as baseload generation is replaced with purchases and sales for resale volumes are lower.
- **Other operating expenses** are anticipated to end the year above budget primarily due to above-budget Craig Unit 2 outage expenses partially offset by below-budget distributed energy resources.
- **Depreciation, amortization and accretion** are projected to end the year significantly below budget due to recognizing a gain on the sale of Windy Gap water units expected to occur before the end of the year. The gain was partially offset by above-budget expenses as asset retirement obligation costs were updated and assets were retired that were not fully depreciated or required additional costs to remove resulting in a loss on retirement.
The results have uncertainty primarily because of the unpredictability of bilateral sales and the energy imbalance market. At this time, operating expenses and capital additions are expected to end the year below budget. However, debt service expenditures are expected to be above budget as discussed in the debt service expenditures section. Overall, a budget contingency transfer appropriation will be required and is expected not to exceed $5 million.

**Budgetary highlights year to date**

The following budgetary highlights are presented on a non-GAAP budgetary basis.

>2% Favorable | 2% to -2% At or near budget | <-2% Unfavorable

**Total revenues, $3.7 million below budget**

Key variances greater than 2% or less than (2%)

- **Sales to owner communities** were below budget $5.1 million. Energy revenues were $4.2 million or 3.9% below budget due to below-budget energy. Demand revenues were $0.9 million or 1.2% below budget as coincident and non-coincident billing demand were below budget 1.2% and 1.1%, respectively.

- **Sales for resale - long-term** were below budget $1 million due to lower available baseload generation that serves a contract and below-budget resold wind generation, partially offset by calls on a capacity contract.

- **Sales for resale - short-term** were below budget $1.6 million as energy volume was 38% below budget, partially offset by 55.7% above-budget average prices. The variance is primarily due to selling less energy in the Western Energy Imbalance Service (WEIS) market than budgeted because of lower average prices and unit outages and curtailments. WEIS operations started April 1.

- **Wheeling** was above budget $2.7 million due to unplanned point-to-point transmission sales and above-budget network customer service charges.

- **Interest and other income** was above budget $1.3 million primarily due to higher interest income earned on investments.
Total operating expenses, $16 million below budget
Key variances greater than 2% or less than (2%)

- **Fuel** was $13.9 million below budget.
  - **Coal - Rawhide Unit 1** 78% of the overall variance, $10.8 million below budget. Generation was below budget due to lower-cost energy available in the WEIS market, unplanned outages, curtailments and an unplanned extension of the scheduled minor outage.
  - **Coal - Craig units** 33% of the overall variance, $4.6 million below budget. Generation was below budget due to lower-cost energy available in the WEIS market, the extended Craig Unit 2 scheduled maintenance outage, curtailments and unplanned outages. Unit 1 was offline from April 24th to May 14th due to mercury emissions. An unplanned outage on Craig Unit 2 led to an early start of the scheduled maintenance outage and remained offline January 18th to May 17th for repairs to the primary air fans. Price was above budget due to an updated price from Trapper Mine as total projected production from the mine decreased, increasing cost per ton delivered. The above-budget pricing is expected to continue through the end of the year.

- **Natural Gas** (11%) of the overall variance, $1.5 million above budget. The combustion turbine units were used predominantly to make sales and to serve load during the scheduled minor outage on Rawhide Unit 1. Further, non-generation gas expense was above budget due to losses on price-locked gas that was not burned, as prices had fallen. Price was below budget due to lower market prices.

- **Distributed energy resources** were $4.3 million below budget due to the unpredictability of the completion of customers' energy efficiency projects, below-budget personnel expenses and consulting services. The energy efficiency rebates and incentives will finish the year below budget primarily due to slow participation in small and medium businesses, which is driven by continued effects of the COVID-19 pandemic and economic recovery challenges.

- **Production, transmission, and administrative and general** were $2.5 million below budget. Projects were either completed below budget or expenses not required. The below-budget expenses include: 1) Rawhide non-routine projects, 2) digital and communications consulting services, 3) personnel, 4) software and hardware, 5) chemicals, 6) environmental services, 7) transmission non-routine projects, 8) wheeling, 9) market services and 10) administrative and general non-routine projects. The above-budget expenses include: 1) Craig maintenance and scheduled outage, 2) Rawhide Unit 1 scheduled minor outage, 3) general plant and combustion turbine maintenance, 4) SCADA and energy management, 5) planning initiatives and 6) Fordham to Fort St. Vrain termination repair. The net below-budget variance is expected to be spent by the end of the year.
• **Purchased power** was $4.7 million above budget. The above-budget expenses include: 1) market and bilateral purchases to replace baseload generation during outages and curtailments, serve sales and to take advantage of lower-cost energy in the WEIS market, 2) hydropower purchases due to favorable conditions and 3) purchased reserves due to holding fewer reserves on the coal units. The below-budget expenses include: 1) net energy provided to Tri-State Generation and Transmission Association, Inc. (Tri-State) under the forced outage assistance agreement and 2) wind generation.

**Capital additions (year-end estimates as of October 2023)**

The projects listed below are projected to end the year with a budget variance of more than $100,000. In addition, the amounts below are costs for 2023 and may not represent the total cost of the project. Further changes to capital projections are anticipated and staff will continue to monitor spending estimates to ensure capital projects are appropriately funded.

### Debt service expenditures

The outstanding principal for Series JJ and KK represents debt associated with transmission assets ($104.6 million) and the Rawhide Energy Station ($21.3 million). Principal and interest payments are made June 1 and interest only payments are made Dec. 1. The table below shows current debt outstanding.

<table>

</tr>
</tbody>
</table>

Fixed rate bond premium costs are amortized over the terms of the related bond issues.

*Series KK is subject to prior redemption, in whole or in part as selected by Platte River, on any date.

As discussed in the capital additions section, Platte River is subject to the subscription reporting model applicable under GASB 96 Subscription-Based Information Technology Arrangements. Payments for implemented right-to-use subscription assets will be presented as debt service expenditures rather than capital additions. Because these were budgeted as capital additions, an appropriation for debt service expenditures was not approved for these transactions. Therefore, staff will request a contingency transfer appropriation and is expected not to exceed $5 million. The results presented may not represent the full implementation of the standard until the end of 2023.
Other financial information

- **Deferred revenue and expense accounting policy** - This policy allows deferring revenues and expenses to reduce rate pressure and achieve rate smoothing during the portfolio transition to meet the Resource Diversification Policy goal. Staff will evaluate the financial statements at the end of the year and apply the policy accordingly, which would impact the change in net position.

- **Forced outage assistance agreement** - This agreement, which involves Platte River’s Rawhide Unit 1 and Tri-State’s Craig Unit 3, provides that each party supply replacement energy to the other party during a forced outage of either unit. The Energy Account Balance Limit, defined in the agreement, was exceeded in February and May. Tri-State was invoiced $2.4 million and $2.6 million, respectively. Pursuant to the terms of the agreement, this payment buys down the energy balance to half of the contract limit.

Coverage

| Fixed obligation charge coverage ratio | 1.86 | 2.91 | 2.85 | 2.05 | 2.77 |

(1) Excludes unrealized holding gains and losses on investments.
(2) Fixed obligation charges included in operating expenses are debt-like obligations related to either the ownership of resource assets through take-or-pay contracts or off-balance-sheet financings. Consistent with credit rating agency methodology, Platte River considers 30% of energy purchased under hydropower, solar and wind PPAs and amounts due under pooled financing arrangements to be fixed obligation charges for this purpose.
Business strategies

Communications, marketing and external affairs

During October, the communications, marketing and external affairs (CMEA) team continued the series of presentations about Platte River’s resource planning progress to our owner communities. In addition to stakeholder presentations, the team supported presentations by Jason Frisbie and Raj Singam Setti to the Fort Collins and Longmont city councils.

The CMEA helped coordinate the Fort Collins Utilities Customer Accounts meeting hosted in Platte River’s Energy Engagement Center, helped develop welcoming remarks by Jason Frisbie and facilitated headquarters campus tours.

Internally, the team kicked off the 2023-2024 United Way fall fundraising campaign, setting ambitious goals for donations and staff participation, and recognized National Cybersecurity Awareness Month through a series of Halloween-themed stories.

External affairs staff represented Platte River at the Large Public Power Council Policy Task Force event in Washington, D.C., conducting meetings with staff from the offices of Colorado Senator Hickenlooper and representatives Neguse, Buck and Caraveo, and several senators and representatives from other states, as well as staff from the House Committee on Energy and Commerce.

In addition to attending meetings for the Colorado Energy Office and Colorado Association of Municipal Utilities, external affairs staff met with advocacy and legislative affairs staff of Xcel Energy (Larimer and Weld counties), Energy Outreach Colorado and United Way of Larimer County.

Staff also conducted due diligence on nine potential grant opportunities and is moving forward with applications for the Colorado Department of Local Affairs microgrids opportunity (partnering with Estes Park; application due November 16) and the U.S. Department of Energy grid resilience and innovation partnership grants opportunity (partnering with Fort Collins; application window slated to open mid-December).

Efficiency Works™ marketing staff attended key accounts meetings for Fort Collins and Longmont, promoted programs at a Loveland Chamber Business After Hours event and presented an HVAC 101 class to Front Range Community College students in Longmont. Staff developed and deployed a general marketing campaign encompassing social media, digital advertising and radio ads, and direct mail and email campaigns for services and rebates. Work continued on streamlining the Efficiency Works mission and vision.

Human resources

Platte River’s human resources team completed the rollout of the compensation study training and communication with all employees. Each employee received a personalized impact statement via small and large group training opportunities and one-on-one question and answer sessions. The human
resources team is also working with the senior leadership team on the in-range analysis to transition employees from the former step program to a new market-based range program.

The human resources manager delivered annual training to all levels of Platte River leadership that included human resources and employment law updates.

Platte River hosted the utilities human resources shirtsleeves conference during the first week of October. The conference included all Platte River human resources staff and 42 individuals representing eight organizations attending in-person and remotely.

Safety

- Platte River safety offered six classes for basic first aid training over a two-day period at headquarters. A third-party vendor trained 49 employees.
- The Emergency Services Specialist attended the Fire Leadership Challenge 2023 conference in Keystone, Colorado.
- Safety personnel began supporting a series of combustion turbine outages at Rawhide.
- Working with the National Fire Protection Association, the safety team performed the required fire system inspections and tests at Rawhide.
- Rawhide experienced a coal mill-related fire and emergency plant evacuation. There was no loss of fire containment, full accountability, and no injuries or further incident.

Platte River had no recordable or lost time injuries in October.

Financial

2023 Board contingency

Based on the most recent trends and assumptions, projected debt service expenditures are approximately $0.6 million above budget. As discussed in the financial report, Platte River is subject to subscription reporting under GASB 96 Subscription-Based Information Technology Arrangements. Payments for implemented right-to-use subscription assets will be presented as debt service expenditures rather than capital additions. Because these were budgeted as capital additions, the 2023 Strategic Budget did not appropriate debt service expenditures for these transactions. As actual results are uncertain, staff has included an additional amount.
The December board materials include a memorandum and resolution to cover additional debt expenditures for 2023 above original planned expenses. Operating expenses and capital additions are not expected to exceed budget, but the resolution is flexible to cover operating expenses and capital additions if needed. The board contingency transfer request is for a not-to-exceed amount. This will enable staff to refine the actual transfer, up to the maximum, after year-end close when actual costs are known. Staff will report the final amount transferred at the February board meeting.

**Proposed 2024 Strategic Budget**

Included in this month’s board materials is a memorandum accompanying the final budget document, as well as a proposed resolution to adopt the 2024 Strategic Budget and appropriate funds for 2024 expenditures. At the board meeting, staff will review the budget changes since the public hearing and briefly recap the budget results, and then ask the board to adopt the budget.

Below is a condensed schedule of the overall budget process.

**Preliminary financial audit work**

During the week beginning November 27, FORVIS, Platte River’s external auditors, reviewed financial processes, met with staff to review internal controls, and reviewed Sept. 30, 2023 financial results.

**Credit rating update**

Fitch Ratings (Fitch) conducted its annual surveillance of Platte River. In Fitch’s published report, Fitch affirmed Platte River’s AA rating with a stable outlook. The ratings reflect Fitch’s base and stress scenarios, which showed strong operating cash flow and downward trending debt. Platte River’s strong revenue defensibility is based on long-term, all-requirements wholesale electric power contracts with the owner communities (and their very strong purchaser credit quality), as well as on the ability of Platte River and the owner communities to independently establish rates. Platte River’s very low operating cost burden drives its similarly situated operating risk and reflects a diverse resource mix, including historically low-cost coal-fired units, as well as natural gas-fired units, wind, hydropower and solar sources. The report also noted that over the past several years, Platte River has begun to expand its renewable resources to prepare for the retirement of coal-fired generation.
Transition and integration

Distributed energy solutions

October and November marked a transitional period for the Distributed Energy Solutions (DES) staff, focusing on 2024 program offerings. While upholding current customer programs, staff updated selections for 2024. They collaborated with the contracts and purchasing teams to secure necessary agreements to allow the program to expand into areas like building electrification and electric vehicle initiatives.

Key activities in included:

- Efficiency Works Homes completed the first six months of the revamped income-qualified program. Program participation grew significantly, with completed services doubling from September to October.
- Efficiency Works Business began to develop an electric vehicle (EV) fleet planning website tool to provide online calculators and reporting to help businesses shift their fleets from internal combustion engines to electric. We expect to complete and launch these tools in January 2024.
- Staff initiated a Spanish translation project for the EV shopper website platform, enhancing accessibility for customers in the owner communities. We expect to complete the project by mid-December.
- After a third-party vendor unexpectedly ended services in August, staff successfully transitioned to a new model for the Appliance Recycling Program, so that customers can continue to recycle inefficient refrigerators and freezers properly.

Through October 2023, Efficiency Works programs have achieved:

- 8,777 MWh of energy savings complete, with an additional 5,746 MWh savings in progress.
- 1,094 kW summer peak reduction complete, with an additional 236 kW peak reduction in progress.
- 2,257 residential and 472 business customer interactions with program offerings.
- $7.3 million invested in our communities, including incentives and administrative costs incurred.
Digital departments

The digital department encompasses various domains, including enterprise infrastructure, enterprise applications, operational technology, telecommunications and fiber optics, client technology and security, and information and cyber governance.

The following are updates on key in-process and completed department initiatives and activities.

System Implementation

- **Oracle Cloud Fusion Enterprise Resource Planning (ERP) system implementation**

  The primary goal of the ERP project is to transform Platte River's business processes, gain efficiencies, and increase reporting and analytics capabilities to provide information necessary for strategic decision-making in our ever-changing environment. The project will give staff integrated tools and access to information across the organization in a cohesive suite of systems to enable faster, better-informed decision making.

  - The implementation team is preparing for our second “conference room pilot.” These sessions will test the system using real-world business scenarios to understand how it performs and if further system configuration is needed. The sessions will run daily from January 9 until February 12 and will require significant staff time from across the organization. The primary goals are to improve the user’s understanding of how the system works and identify issues so they can be resolved before user acceptance testing. Investing the time in this process now will improve the chances of a successful system launch in July 2024.

  - The team is finalizing its change management process to propose, review, approve and track configuration changes. Now that most of the configuration is complete and should remain static between now and go-live, any proposed changes need to be reviewed for impact to schedule, budget, and other areas of the system. Change control is essential to the overall success of the project; this process will ensure we make only vetted and approved changes to the system, preventing adverse system and project impacts.

Cyber Security

- **Mobile Device Management (MDM) with Microsoft Intune**

  - The objective of MDM is to separate corporate data from personal data on mobile devices so the corporate data can be removed when employees leave the organization. MDM helps protect against data loss or theft, reducing risk due to vulnerabilities on mobile devices and increasing the organization’s overall security posture.

Digital Project and Portfolio Management

- **Digital project management office activities**

  The digital project portfolio’s goal is to capture all active digital department programs and projects and gather insight into digital's current workload and potential capacity for additional work. The project portfolio will allow Platte River to monitor current and requested projects and prioritize those that bring maximum value to the organization.
We work with users across the organization to capture current projects and future requests so we can present a holistic view of the project landscape to the business unit leaders and get their input on prioritization of the numerous projects. This will help ensure digital is focusing on the projects that the business units agree will deliver the greatest benefit to the organization.

We are implementing a formal “resource management” process. The objective of resource management is to plan, schedule, and allocate resources based on real-time resource availability data. Resource management aligns resource availability with project requirements and identifies skillset gaps that could impede project success.

Operations

Fuels and water

Thus far in the 2024 water year, conditions have generally been dry in the upper Colorado river basin and the snowpack is slightly below the 30-year average (see graph). Although the water year has just begun, early season snowpack provides the significant benefit of boosting basin soil moisture content, which establishes a solid foundation for additional snowpack through the remainder of the year and boosts runoff volumes in the spring.

Looking ahead, a strong El Niño pattern is developing in the Pacific, which generally increases chances of a wetter-than-average winter in northern Colorado. As shown in the precipitation outlook, all of Colorado has an increased chance of above-average precipitation through the winter months. Forecasters caution, however, that no two El Niño events are alike and a slight shift in the weather pattern could bring drier conditions and reduced snowpack to the region. For reference, the past three years with similar strong El Niño conditions have led to peak snowpacks in the upper Colorado basin of 116%, 102%, and 100% of average.
Through the fall, the Chimney Hollow Reservoir project has benefitted from favorable weather conditions. The contractor has made solid progress throughout the project. Construction operations are currently running 24 hours a day, six days a week, with over 500 on-site personnel. The main dam is now over 140 feet tall (see image) and work will continue through the winter as weather allows. At the saddle dam, foundation work is substantially complete and the embankment will be completed next summer. The project is nearly 50% complete and is approximately two years from completion.

In August, Platte River issued a request for proposals (RFP) offering to sell up to five unfirmed Windy Gap units and received multiple bids. Platte River accepted three bids and will sell all five units. Staff is currently working through the purchase and sale process with each of the successful bidders and will present an update on the RFP process at the December board meeting.
